BENEFITS:
» Industry-leading security
» Superior embeddability
» Fast integration and time-to-market
» Unparalleled investment protection
» Cost-effective and highly scalable
» Common Blade technology: common size, connection method, and software interface with the SkyeModule M9 UHF reader for maximum design and solution flexibility

FEATURES:
» Miniscule footprint - 49% smaller than a business card
» Greatest tag compatibility with Tagnostic® and TagIQ™
» Minimal power consumption and maximum read range
» Software Adjustable Host Interfaces: UART (TTL), SPI, USB, I²C
» 7 General Purpose I/O
» Peripheral devices for encryption algorithms and key storage
» Simple and intuitive API

Product Overview
The SkyeModule™ M2 combines the rich HF tag/protocol support and performance typical of SkyeTek reader modules with standards-based security that is currently used by the Department of Defense and financial services to deliver the following benefits:

Investment protection through SkyeTek’s Advanced Universal Reader Architecture (AURA) which abstracts frequency, protocol, and tag selection from the application.

Ease of integration by using the SkyeAPI™, a single library that abstracts, simplifies, and automates tag and protocol-specific functions from the programmer.

Tagnostic® support for more ISO 15693 and 14443 A/B tags than any other comparable reader allowing customers to fully optimize their application.

TagIQ™ that recognizes the unique characteristics of each tag so that read/write performance is maximized for each individual tag type.

Performance optimization achieved through best-in-class output power (200mW), noise reduction technology, and power management – essential embeddability measures.

Industry-leading privacy protection and anti-counterfeiting/anti-tampering that can be used with any generic tag saving 60–70% versus tags that use proprietary security.

Support for standard and proprietary encryption such as MIFARE and 3DES as well as future algorithms via optional SAM card slot.

Unprecedented price-performance and TCO, best exemplified by licensing options that allow customers to manufacture modules at cost.

Applications
The SkyeModule M2 has been created specifically for several applications that share common requirements for tag support, protocol, performance, and security. The M2 is an optimal solution for the following:

• Product Authentication and Anti-counterfeiting
• Contactless Payment
• Handheld Reading/Encoding
• Inventory Management
• Patron Management
• Asset Tracking
• Printing/Encoding
SkyeTek transforms traditional RFID into a networking technology enabling goods and assets to participate in a connected world. SkyeTek develops readers that serve as intelligent edge devices and software that binds policies to tagged items. By extending networks to the physical world, our customers increase revenue through their ability to predict demand, prevent counterfeiting, and personalize user interactions.

SkyeTek combines intelligent software with an inexpensive hardware platform to provide a modern RFID security model, distributed policy management engine, and network-ready readers. Enterprises deploy SkyeTek’s solutions to deliver a seamless networking technology enabling goods and assets to participate in a connected world.

Software and Security
Software
SkyeAPI C/NET API
SkyeTek Protocol v3
SkyeWare 4 developer interface
Demonstration applications
SkyeOS™ Embedded
TagIQ™
Field upgradeable firmware bootloader

SkyeOS Product Authentication
Clone and tamper protection
Counter & time-based policy support

SkySecurity (SS) Encryption
DES, 3DES & AES
MIFARE and CryptoRF® support
Extensible security via optional SAM

Transponder Support

Specifications¹

Frequency
13.56 MHz ± 7 kHz

Physical
CF² MH
Length: 66 mm 70 mm
Width: 36 mm 53 mm
Height: 5 mm 9 mm
Weight: 8.7 g 10.5 g

Environment
Storage Temperature: -20°C to 85°C
Operating Temperature: -10°C to 70°C

Host Interfaces/Data Rates
UART (TTL): 9.6-115.2 kbps
SPI: Mode 1 up to 4 Mba/s
USB: 2.0 Full Speed 12 Mba/s
PC: 100/400 kHz

Supply Voltage
5.0 V ± 10%

Peripheral I/O Connection
7 programmable GPIO pins
ISO 7816 smart card slot (optional)

Compliance²
FCC 15.225 EN 300-330
EN 301-489 EN 61000-4-3

Transponder
Communication Rate
ISO 14443A: 106 kbps
ISO 14443B: 106 kbps
ISO 15693: 26 kbps

Air-interface Protocols
ISO 14443 A/B (parts 2-4)
ISO 15693

Current Consumption
Sleep Mode: 4 mA
Idle Mode: 75 mA
Scan Mode: 175 mA

Output Power
Adjustable between 17-23 dBm sustained
(read range and rate are subject to specific environmental conditions)

DKM2 - SkyeModule M2 Developer Kit

The developer kit for the SkyeModule M2 includes all hardware and software components required for the development of applications based on 13.56 MHz reader technology.

Hardware
• 1 M2-CF Module (CompactFlash-style I/O connector)
• 1 M2-MH (mounting hole)
• 1 Host Interface Board
• 1 External Antenna with SMA connector
• 1 MMCX to SMA connector
• 1 9V Power Supply
• 1 RS-232 Cable
• 1 USB 2.0 Cable
• SkyeTek sample tag kit
demonstrations and upgradable firmware support Extensible security via optional SAM

Software
SkyeWare 4 Development & Demonstration Software
SkyeWare Libraries (API): C, .NET
Protocol Command Builder
Command Line Interface
Windows DLL

Service
Technical Support

Notes: ¹ Optional, See transponder datasheets for complete details. ² Specifications apply to SM-M2-CF-HF (CF-style) and SM-M2-MH-HF (Mounting Hole), “CF-style connector, pre-scan compliant. For uses products require additional certification.

SkyeTek Reader Technology: Skyetek provides a variety of reader technology at both 13.56 MHz (HF) and 860-960 MHz (UHF). ReaderDNA, a comprehensive reference design, is available for component level integration of the technology including complete design files, BOM, and test fixture. All Skyetek readers leverage powerful firmware that drastically reduce hardware costs and are delivered in conjunction with ReaderDNA. SkyeModules are controlled via the Skyetek Protocol, a powerful but simple communication protocol that grants the user access to all features of an RFID transponder. Further, they have been designed with flexible and modular embedded software that allows one to select only the features desired.
