Ten poles for Bulgin's 900 Series Buccaneer

This latest addition to the [900 Series Buccaneer](#) connector range further extends the applications of this increasingly popular variant of Bulgin's IP68 rated circular connectors.

All existing body styles; flex, flex in-line, panel mount and flange mount types can now offer 10 contacts rated to 10A, 250V.

Using the already tried and tested 900 Series body shells allows the connector sealing properties of IP68 dust and water resistance to be maintained and all existing accessories can be used.

The 900 Series Buccaneer carry UL, CSA and VDE approvals and, along with the new 10 pole version, are available with 2, 3, 4, 5 and 7 pole contacts and have ratings up to 32A, 600Vac/dc. Temperature range is from -40 to +85°C and cable accommodation is 7 to 22mm diameter.
