

CAROL[®] SPOTLIGHT

Carol[®] Brand Twinaxial Cable

To meet the needs of today's sophisticated, high-speed, wide bandwidth electronics over long distances, with minimum signal loss or degradation, General Cable offers a wide range of Carol[®] Brand coaxial and twinaxial designs in both unbalanced arrays and precision balanced pairs. This offers system designers a wide choice of cost-effective products that reflect the most recent changes in the standards set by UL, CSA and/or the FCC.

Carol[®] Brand Twinaxial Cables meet or exceed the stringent demands of today's precision-balanced pair systems. The minimization of capacitance unbalance is a necessary requirement for long distance data transmission. This cable is designed for computer and instrumentation applications, similar to coaxial cables but with two center conductors instead of one.

The Carol[®] Brand Twinaxial product line comes in a wide variety of constructions to meet the demands of industrial environments, such as: Programmable Logic Controllers (PLC), Data Transmission, Broadcast, Computers and more.

CAROL. BRAND

Are you interested in learning more about General Cable's full line of Carol® Brand Electronic products and their applications? We have a NEW Carol® Brand Quick Reference Applications Guide available for you, which includes the following featured products:

- Alarm and Security
- Fire Alarm
- Classics - Communications & Control
- Classics - Hi-Temp
- EXZEL® High-Endurance Cabling
- DBRF (LMR) Coax
- A/V-Coax & Speaker Wire
- Access Control
- Commodore® (Armored)

Our products are available for immediate shipment through a network of authorized Carol® stocking distributors and distribution centers.
