

## SN74AVCH4T245 4-Bit Dual-Supply Bus Transceiver

### With Configurable Level-Shifting, Voltage Translation, and 3-State Outputs

#### 1 Features

- Control Inputs  $V_{IH}/V_{IL}$  Levels are Referenced to  $V_{CCA}$  Voltage
- Fully Configurable Dual-Rail Design Allows Each Port to Operate Over the Full 1.2V to 3.6V Power-Supply Range
- I/Os Are 4.6V Tolerant
- $I_{off}$  Supports Partial Power-Down-Mode Operation
- Bus Hold on Data Inputs Eliminates the Need for External pull-up/pull-down Resistors
- Max Data Rates
  - 380 Mbps (1.8 V to 3.3 V Translation)
  - 200 Mbps (<1.8 V to 3.3 V Translation)
  - 200 Mbps (Translate to 2.5 V or 1.8 V)
  - 150 Mbps (Translate to 1.5 V)
  - 100 Mbps (Translate to 1.2 V)
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection Exceeds JESD 22
  - 8000 V Human Body Model (A114-A)
  - 200 V Machine Model (A115-A)
  - 1000 V Charged-Device Model (C101)

#### 2 Applications

- Personal Electronics
- Industrial
- Enterprise
- Telecom

**Logic Diagram (Positive Logic) for 1/2 of AVCH4T245**

#### 3 Description

This 4-bit noninverting bus transceiver uses two separate configurable power-supply rails. The A port is designed to track  $V_{CCA}$ .  $V_{CCA}$  accepts any supply voltage from 1.2 V to 3.6 V. The B port is designed to track  $V_{CCB}$ .  $V_{CCB}$  accepts any supply voltage from 1.2 V to 3.6 V. The SN74AVCH4T245 is optimized to operate with  $V_{CCA}/V_{CCB}$  set at 1.4 V to 3.6 V. It is operational with  $V_{CCA}/V_{CCB}$  as low as 1.2 V. This allows for universal low voltage bidirectional translation between any of the 1.2V, 1.5V, 1.8V, 2.5V, and 3.3V voltage nodes.

The SN74AVCH4T245 is designed for asynchronous communication between two data buses. The logic levels of the direction-control (DIR) input and the output-enable ( $\overline{OE}$ ) input activate either the B-port outputs or the A-port outputs or place both output ports into the high-impedance mode. The device transmits data from the A bus to the B bus when the B-port outputs are activated, and from the B bus to the A bus when the A-port outputs are activated. The input circuitry on both A and B ports is always active and must have a logic HIGH or LOW level applied to prevent excess  $I_{CC}$  and  $I_{CCZ}$ .

The SN74AVCH4T245 device control pins (1DIR, 2DIR, 1OE, and 2OE) are supplied by  $V_{CCA}$ .

This device is fully specified for partial-power-down applications using  $I_{off}$ . The  $I_{off}$  circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

**Device Information<sup>(1)</sup>**

PART NUMBER	PACKAGE	BODY SIZE (NOM)
SN74AVCH4T245	UQFN (16)	1.80 mm × 2.60 mm
	VQFN (16)	3.50 mm × 4.00 mm
	TVSOP (16)	4.40 mm × 3.60 mm
	TSSOP (16)	4.40 mm × 5.00 mm
	SOIC (16)	3.91 mm × 9.90 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 5 Description (continued)

The  $V_{CC}$  isolation feature ensures that if either  $V_{CC}$  input is at GND, then both ports are in the high-impedance state. The bus-hold circuitry on the powered-up side always stays active.

Active bus-hold circuitry holds unused or undriven data inputs at a valid logic state. Use of pull-up or pull-down resistors with the bus-hold circuitry is not recommended. The bus-hold circuitry on the powered-up side always stays active.

To ensure the high-impedance state during power up or power down,  $\overline{OE}$  should be tied to  $V_{CC}$  through a pull-up resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

### Pin Functions

NAME	PIN		I/O	DESCRIPTION
	SOIC, TVSOP, TSSOP, VQFN	UQFN		
1A1	4	6	I/O	Input/output 1A1. Referenced to $V_{CCA}$ .
1A2	5	7	I/O	Input/output 1A2. Referenced to $V_{CCA}$ .
1B1	13	15	I/O	Input/output 1B1. Referenced to $V_{CCB}$ .
1B2	12	14	I/O	Input/output 1B2. Referenced to $V_{CCB}$ .
1DIR	2	4	I	Direction-control input for 1 ports
$\overline{1OE}$	15	1	I	3-state output-mode enables. Pull $\overline{OE}$ high to place '1' outputs in 3-state mode. Referenced to $V_{CCA}$ .
2A1	6	8	I/O	Input/output 2A1. Referenced to $V_{CCA}$ .
2A2	7	9	I/O	Input/output 2A2. Referenced to $V_{CCA}$ .
2B1	11	13	I/O	Input/output 2B1. Referenced to $V_{CCB}$ .
2B2	10	12	I/O	Input/output 2B2. Referenced to $V_{CCB}$ .
2DIR	3	5	I	Direction-control input for 2 ports
$\overline{2OE}$	14	16	I	3-state output-mode enables. Pull $\overline{OE}$ high to place 2 outputs in 3-state mode. Referenced to $V_{CCA}$ .
GND	8, 9	10, 11	—	Ground
$V_{CCA}$	1	3	—	A-port power supply voltage. $1.2\text{ V} \leq V_{CCA} \leq 3.6\text{ V}$
$V_{CCB}$	16	2	—	B-port power supply voltage. $1.2\text{ V} \leq V_{CCB} \leq 3.6\text{ V}$

## 7 Specifications

### 7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) <sup>(1)</sup>

			MIN	MAX	UNIT
V <sub>CCA</sub>	Supply voltage		-0.5	4.6	V
V <sub>CCB</sub>	Supply voltage		-0.5	4.6	V
V <sub>I</sub>	Input voltage <sup>(2)</sup>	I/O ports (A port)	-0.5	4.6	V
		I/O ports (B port)	-0.5	4.6	
		Control inputs	-0.5	4.6	
V <sub>O</sub>	Voltage applied to any output in the high-impedance or power-off state <sup>(2)</sup>	A port	-0.5	4.6	V
		B port	-0.5	4.6	
V <sub>O</sub>	Voltage applied to any output in the high or low state <sup>(2) (3)</sup>	A port	-0.5	V <sub>CCA</sub> + 0.5	V
		B port	-0.5	V <sub>CCB</sub> + 0.5	
I <sub>IK</sub>	Input clamp current	V <sub>I</sub> < 0		-50	mA
I <sub>OK</sub>	Output clamp current	V <sub>O</sub> < 0		-50	mA
I <sub>O</sub>	Continuous output current			±50	mA
	Continuous current through V <sub>CCA</sub> , V <sub>CCB</sub> , or GND			±100	mA
T <sub>stg</sub>	Storage temperature		-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input voltage and output negative voltage ratings may be exceeded if the input and output current ratings are observed.
- (3) The output positive voltage rating may be exceeded up to 4.6V maximum if the output current rating is observed.

### 7.2 ESD Ratings

		VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±8000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1000
		Machine model	±200

- (1) JEDEC document JEP155 states that 500V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250V CDM allows safe manufacturing with a standard ESD control process.

### 7.3 Recommended Operating Conditions

see <sup>(1)(2)(3)(4)(5)</sup>

		V <sub>CCI</sub>	V <sub>CCO</sub>	MIN	MAX	UNIT
V <sub>CCA</sub>	Supply voltage			1.2	3.6	V
V <sub>CCB</sub>	Supply voltage			1.2	3.6	V
V <sub>IH</sub>	High-level input voltage	Data inputs <sup>(4)</sup>	1.2 V to 1.95 V	V <sub>CCI</sub> × 0.65		V
			1.95 V to 2.7 V	1.6		
			2.7 V to 3.6 V	2		
V <sub>IL</sub>	Low-level input voltage	Data inputs <sup>(4)</sup>	1.2 V to 1.95 V	V <sub>CCI</sub> × 0.35		V
			1.95 V to 2.7 V	0.7		
			2.7 V to 3.6 V	0.8		
V <sub>IH</sub>	High-level input voltage	DIR (referenced to V <sub>CCA</sub> ) <sup>(5)</sup>	1.2 V to 1.95 V	V <sub>CCA</sub> × 0.65		V
			1.95 V to 2.7 V	1.6		
			2.7 V to 3.6 V	2		

- (1) V<sub>CCI</sub> is the V<sub>CC</sub> associated with the input port.
- (2) V<sub>CCO</sub> is the V<sub>CC</sub> associated with the output port.
- (3) All unused data inputs of the device must be held at V<sub>CCI</sub> or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.
- (4) For V<sub>CCI</sub> values not specified in the data sheet, V<sub>IH</sub> min = V<sub>CCI</sub> × 0.7 V, V<sub>IL</sub> max = V<sub>CCI</sub> × 0.3 V.
- (5) For V<sub>CCA</sub> values not specified in the data sheet, V<sub>IH</sub> min = V<sub>CCA</sub> × 0.7 V, V<sub>IL</sub> max = V<sub>CCA</sub> × 0.3 V.

**Recommended Operating Conditions (continued)**

 see <sup>(1)(2)(3)(4)(5)</sup>

			V <sub>CCI</sub>	V <sub>CCO</sub>	MIN	MAX	UNIT
V <sub>IL</sub>	Low-level input voltage	DIR (referenced to V <sub>CCA</sub> ) <sup>(5)</sup>	1.2 V to 1.95 V		V <sub>CCA</sub> × 0.35		V
			1.95 V to 2.7 V		0.7		
			2.7 V to 3.6 V		0.8		
V <sub>I</sub>	Input voltage				0	3.6	V
V <sub>O</sub>	Output voltage	Active state			0	V <sub>CCO</sub>	V
		3-state			0	3.6	
I <sub>OH</sub>	High-level output current			1.2 V		–3	mA
				1.4 V to 1.6 V		–6	
				1.65 V to 1.95 V		–8	
				2.3 V to 2.7 V		–9	
				3 V to 3.6 V		–12	
I <sub>OL</sub>	Low-level output current			1.2 V		3	mA
				1.4 V to 1.6 V		6	
				1.65 V to 1.95 V		8	
				2.3 V to 2.7 V		9	
				3 V to 3.6 V		12	
Δt/Δv	Input transition rise or fall rate					5	ns/V
T <sub>A</sub>	Operating free-air temperature				–40	85	°C

(6) An external driver must sink at least  $I_{BHHO}$  to switch this node from high to low.

(7) For I/O ports, the parameter  $I_{OZ}$  includes the input leakage current.

PULSE DURATION**

**VOLTAGE WAVEFORMS  
PROPAGATION DELAY TIMES**

**VOLTAGE WAVEFORMS  
ENABLE AND DISABLE TIMES**

- NOTES:
- $C_L$  includes probe and jig capacitance.
  - Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
  - All input pulses are supplied by generators having the following characteristics: PRR = 10 MHz,  $Z_O = 50 \Omega$ ,  $dv/dt \geq 1 \text{ V/ns}$ ,  $dv/dt \geq 1 \text{ V/ns}$ .
  - The outputs are measured one at a time, with one transition per measurement.
  - $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
  - $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
  - $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$ .
  - $V_{CCI}$  is the  $V_{CC}$  associated with the input port.
  - $V_{CCO}$  is the  $V_{CC}$  associated with the output port.

**Figure 3. Load Circuit and Voltage Waveforms**

## 9 Detailed Description

### 9.1 Overview

The SN74AVCH4T245 is a 4-bit, dual-supply noninverting bidirectional voltage level translation device. Ax pins and control pins (1DIR, 2DIR, 1 $\overline{\text{OE}}$ , and 2 $\overline{\text{OE}}$ ) are supported by  $V_{\text{CCA}}$ , and Bx pins are supported by  $V_{\text{CCB}}$ . The A port is able to accept I/O voltages ranging from 1.2 V to 3.6 V, while the B port can accept I/O voltages from 1.2 V to 3.6 V. A high on DIR allows data transmission from Ax to Bx and a low on DIR allows data transmission from Bx to Ax when  $\overline{\text{OE}}$  is set to low. When  $\overline{\text{OE}}$  is set to high, both Ax and Bx pins are in the high-impedance state. Refer to the *AVC Logic Family Technology and Applications Application Report* [SCEA006](#).

### 9.2 Functional Block Diagram

Figure 4. Logic Diagram (Positive Logic) for 1/2 of SN74AVCH4T245

### 9.3 Feature Description

#### 9.3.1 Fully Configurable Dual-Rail Design Allows Each Port to Operate Over the Full 1.2V to 3.6V Power-Supply Range

Both  $V_{\text{CCA}}$  and  $V_{\text{CCB}}$  can be supplied at any voltage between 1.2 V and 3.6 V; thus, making the device suitable for translating between any of the low voltage nodes (1.2 V, 1.8 V, 2.5 V, and 3.3 V).

#### 9.3.2 Supports High Speed Translation

The SN74AVCH4T245 device can support high data rate applications. The translated signal data rate can be up to 380 Mbps when the signal is translated from 1.8 V to 3.3 V.

#### 9.3.3 $I_{\text{off}}$ Supports Partial-Power-Down Mode Operation

$I_{\text{off}}$  will prevent backflow current by disabling I/O output circuits when device is in partial-power-down mode.

#### 9.3.4 Bus-Hold Circuitry

This device has active bus-hold circuitry that holds unused or undriven inputs at a valid logic state. Use of pull-up or pull-down resistors with the bus-hold circuitry is not recommended. (Refer to the *Bus-Hold Circuit Application Report* ([SCLA015](#))). Pullup and pulldown resistors are not recommended on the inputs of devices with bus-hold. Unused inputs can be left floating.

## Feature Description (continued)

### 9.3.5 Vcc Isolation Feature

The VCC isolation feature ensures that if either  $V_{CCA}$  or  $V_{CCB}$  are at GND (or  $< 0.4V$ ), both ports will be in a high-impedance state (IOZ shown in [Electrical Characteristics](#)). This prevents false logic levels from being presented to either bus.

## 9.4 Device Functional Modes

[Table 1](#) lists the functional modes of the SN74AVCH4T245.

**Table 1. Function Table (Each 2-Bit Section)**

CONTROL INPUTS <sup>(1)</sup>		OUTPUT CIRCUITS		OPERATION
$\overline{OE}$	DIR	A PORT	B PORT	
L	L	Enabled	Hi-Z	B data to A bus
L	H	Hi-Z	Enabled	A data to B bus
H	X	Hi-Z	Hi-Z	Isolation

(1) Input circuits of the data I/Os are always active.

## 10 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 10.1 Application Information

The SN74AVCH4T245 device can be used in level-shifting applications for interfacing devices or systems operating at different interface voltages with one another. The SN74AVCH4T245 device is ideal for use in applications where a push-pull driver is connected to the data I/Os. The max data rate can be up to 380 Mbps when device translates a signal from 1.8 V to 3.3 V.

### 10.2 Typical Application

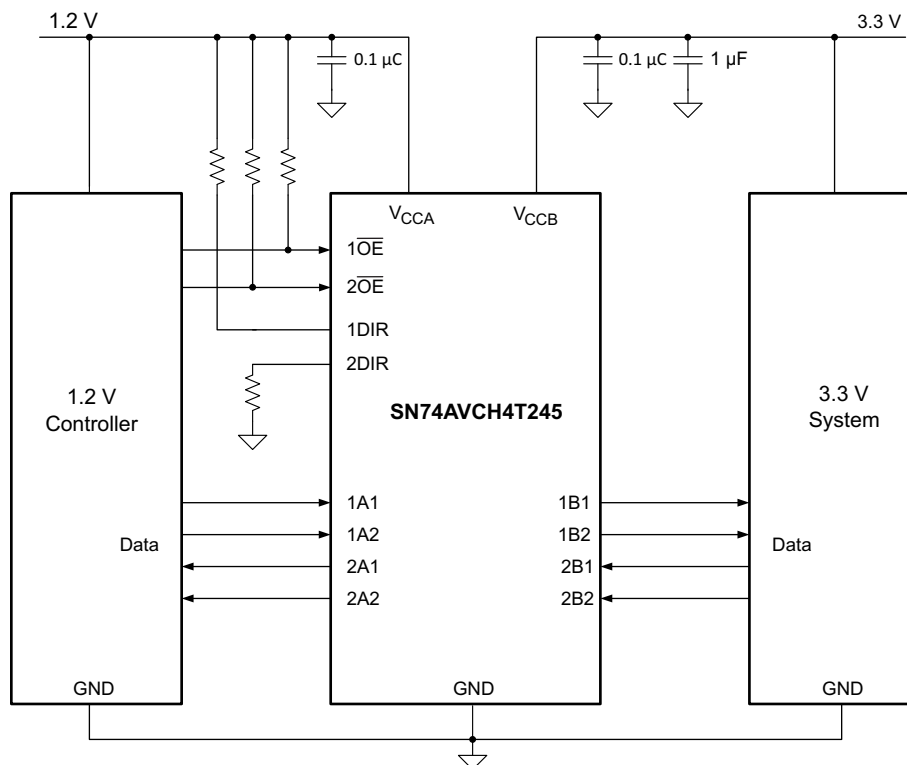

Figure 5. Typical Application Diagram

## Typical Application (continued)

### 10.2.1 Design Requirements

For the design example shown in *Typical Application*, use the parameters listed in [Table 2](#).

**Table 2. Design Parameters**

DESIGN PARAMETER	EXAMPLE VALUE
Input voltage range	1.2 V to 3.6 V
Output voltage range	1.2 V to 3.6 V

### 10.2.2 Detailed Design Procedure

To begin the design process, determine the following:

- Input voltage range
  - Use the supply voltage of the device that is driving the SN74AVCH4T245 device to determine the input voltage range. For a valid logic high, the value must exceed the  $V_{IH}$  of the input port. For a valid logic low, the value must be less than the  $V_{IL}$  of the input port.
- Output voltage range
  - Use the supply voltage of the device that the SN74AVCH4T245 device is driving to determine the output voltage range.

### 10.2.3 Application Curve

**Figure 6. Translation Up (1.2 V to 3.3 V) at 2.5 MHz**

## 11 Power Supply Recommendations

The SN74AVCH4T245 device uses two separate configurable power-supply rails,  $V_{CCA}$  and  $V_{CCB}$ .  $V_{CCA}$  accepts any supply voltage from 1.2 V to 3.6 V and  $V_{CCB}$  accepts any supply voltage from 1.2 V to 3.6 V. The A port and B port are designed to track  $V_{CCA}$  and  $V_{CCB}$  respectively allowing for low voltage bidirectional translation between any of the 1.2-V, 1.5-V, 1.8-V, 2.5-V, and 3.3-V voltage nodes.

The output-enable ( $\overline{OE}$ ) input circuit is designed so that it is supplied by  $V_{CCA}$  and when the  $\overline{OE}$  input is high, all outputs are placed in the high-impedance state. To ensure the high-impedance state of the outputs during power up or power down, the  $\overline{OE}$  input pin must be tied to  $V_{CCA}$  through a pull-up resistor and must not be enabled until  $V_{CCA}$  and  $V_{CCB}$  are fully ramped and stable. The minimum value of the pull-up resistor to  $V_{CCA}$  is determined by the current-sinking capability of the driver.

$V_{CCA}$  or  $V_{CCB}$  can be powered up first. If the SN74AVCH4T245 is powered up in a permanently enabled state, pull-up resistors are recommended at the input. This ensures proper/glitch-free power-up. (Refer to *Designing with SN74LVCXT245 and SN74LVCHXT245 Family of Direction Controlled Voltage Translators/Level-Shifters* Application Note ([SLVA746](#)).)

## 12 Layout

### 12.1 Layout Guidelines

To ensure reliability of the device, following common printed-circuit board layout guidelines is recommended.

- Bypass capacitors should be used on power supplies.
- Short trace lengths should be used to avoid excessive loading.
- Place pads on the signal paths for loading capacitors or pull-up resistors to help adjust rise and fall times of signals, depending on the system requirements.

(1) The marketing status values are defined as follows:  
**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of  $\leq 1000$ ppm threshold. Antimony trioxide based flame retardants must also meet the  $\leq 1000$ ppm threshold requirement.

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

<sup>(4)</sup> There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

<sup>(5)</sup> Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**THERMAL INFORMATION**

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at [www.ti.com](http://www.ti.com).

The exposed thermal pad dimensions for this package are shown in the following illustration.

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to TI's Terms of Sale ([www.ti.com/legal/termsofsale.html](http://www.ti.com/legal/termsofsale.html)) or other applicable terms available either on [ti.com](http://ti.com) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.
