DESCRIPTION

The LD39150 series of high performance ultra-low dropout linear regulators operates from 2.5V to 5.5V input supply and provides ultra-low dropout voltage, high output current with low ground current. Wide range of preset output voltage options are available. These ultra-low dropout linear regulators respond fast to step changes in load which makes them suitable for low voltage micro-processor applications. The LD39150 is developed on a CMOS process technology which allows low quiescent current operation independent of output load current. This CMOS process also allows the LD39150 to operate under extremely low dropout conditions.
