

# 0.5Ω Low-Voltage Dual SPDT Analog Switch

# UM4684H *CSP10 2.0×1.5* UM4684EEUE *MSOP10*

#### **General Description**

The UM4684 is a sub  $1\Omega$  (0.5 $\Omega$  at 2.7V) dual SPDT analog switch designed for low voltage applications.

The UM4684 has on-resistance matching(less than  $0.05\Omega$  at 2.7V) and flatness (less than  $0.2\Omega$  at 2.7V) that are guaranteed over the entire voltage range. Additionally, low logic thresholds make the UM4684 an ideal interface to low voltage DSP control signals.

The UM4684 has fast switching speed with break-before-make guaranteed. In the ON condition, all switching elements conduct equally in both directions. OFF-isolation and crosstalk is -69dB at 100kHz.

The UM4684 is built on high-density low voltage CMOS process, and contains the additional benefit of 2000V ESD protection.

As a committed partner to the community and the environment, Union manufactures this product with lead (Pb)-free device terminations.

#### **Applications**

- Cellular Phones
- Speaker Headset Switching
- Audio and Video Signal Routing
- PCMCIA Cards
- Battery Operated Systems
- Relay Replacement
- Power Routing
- Communication Circuits

#### **Features**

- CSP10 & MSOP10 Packages
- ESD Protection >2000V
- +1.8V to +5.5V Single Supply Operation
- NC Switch  $R_{ON}$ :  $0.5\Omega$  (+2.7V Supply)
- NO Switch  $R_{ON}$ : 0.6 $\Omega$  (+2.7V Supply)
- R<sub>ON</sub> Match between Channels:  $0.05\Omega$  Max (+2.7V Supply)
- R<sub>ON</sub> Flatness over Signal Range: 0.2Ω Max (+2.7V Supply)
- 1.8V Logic Compatibility
- Low Crosstalk: -69dB (100kHz)
- High Off-Isolation: -69dB (100kHz)

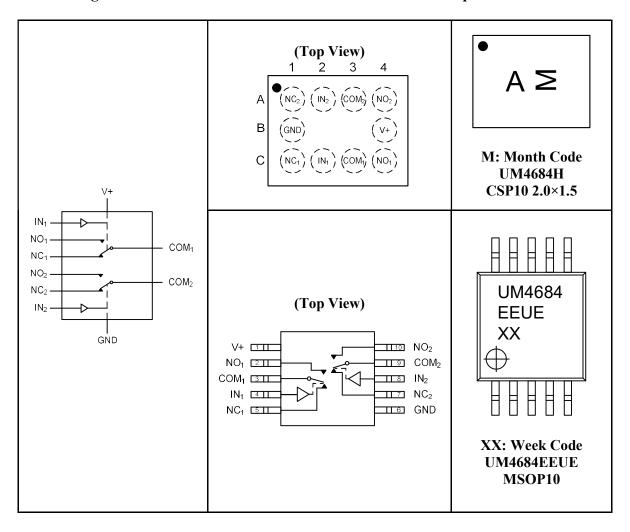

#### **Ordering Information**

Part Number	Temp. Range	Packaging Type	Marking Code	<b>Shipping Qty</b>
UM4684H	-40°C to 85°C	CSP10 2.0×1.5	A	3000pcs/7 Inch Tape & Reel
UM4684EEUE	-40°C to 85°C	MSOP10	UM4684EEUE	4000pcs/13 Inch Tape & Reel

#### **Pin Description**

Pin	Pin N	umber	
Name	CSP10 2.0×1.5	MSOP10	Function
NC_	A1, C1	5, 7	Analog Switch—Normally Closed Terminal
IN_	A2, C2	4, 8	Digital Control Input
COM_	A3, C3	3, 9	Analog Switch—Common Terminal
NO_	A4, C4	2, 10	Analog Switch—Normally Open Terminal
V+	B4	1	Positive Supply Voltage Input
GND	B1	6	Ground

#### **Function Table**

IN_	NO_	NC_
0	OFF	ON
1	ON	OFF

#### **Absolute Maximum Ratings (Note 1)**

Parameter	Value	Unit	
Voltage on V+ Pin (Reference to GND)		-0.3 to +6	V
Voltage on IN_, COM_, NC_, NO_ Pins (Reference to GND)	s (Note 2)	-0.3 to (V <sub>+</sub> +0.3)	V
Continuous Current (NO_, NC_, COM_	±300	mA	
Peak Current (Pulsed at 1 ms, 10% Duty	±500	mA	
Storage Temperature		-65 to 150	°C
Package Solder Reflow Conditions	IR/Convection	250	°C
(Note 3)	>2	kV	
Power Dissipation (Packages) (Note 4)	CSP10 (Note 5)	457	mW

- Note 1: Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications are not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
- Note 2: Signals on NC\_, NO\_, or COM\_ or IN\_ exceeding V+ will be clamped by internal diodes. Limit forward diode current to maximum current ratings.
- Note 3: Refer to IPC/JEDEC (J-STD-020B).
- Note 4: All bumps welded or soldered to PC Board.
- Note 5: Derate 5.7mW/°C above 70°C.

#### **Applications Information**

#### **Digital Control Inputs**

The UM4684 logic inputs accept up to +5.5V regardless of supply voltage. For example, with a +3.3V supply, IN\_ may be driven low to GND and high to 5.5V. Driving IN\_ rail-to-rail minimizes power consumption. Logic levels for a +1.8V supply are 0.5V (low) and 1.4V (high).

#### **Analog Signal Levels**

Analog signals that range over the entire supply voltage (V+ to GND) is passed with very little change in on-resistance (see Typical Operating Characteristics). The switches are bidirectional, so the NO\_, NC\_, and COM\_ pins can be either inputs or outputs.

#### Caution

Do not exceed the absolute maximum ratings because stresses beyond the listed ratings may cause permanent damage to devices.

Proper power-supply sequencing is recommended for all CMOS devices. Always apply V+ before applying analog signals, especially if the analog signal is not current limited. If this sequencing is not possible, and if the analog inputs are not current limited to <20mA, add a small signal diode (D1) as shown in Figure 6. Adding a protection diode reduces the analog range to a diode drop (about 0.7V) below V+ (for D1). RON increases slightly at low supply voltages. Maximum supply voltage (V+) must not exceed +6V. Protection diode D1 also protects against some over voltage situations. No damage will result on Figure 6's circuit if the supply voltage is below the absolute maximum rating applied to an analog signal pin.

#### **GREEN COMPLIANCE**

Union Semiconductor is committed to environmental excellence in all aspects of its operations including meeting or exceeding regulatory requirements with respect to the use of hazardous substances. Numerous successful programs have been implemented to reduce the use of hazardous substances and/or emissions.

All Union components are compliant with the RoHS directive, which helps to support customers in their compliance with environmental directives. For more green compliance information, please visit:
