

General Description

The TPAD8605 is wideband, low-noise, low-distortion dual operational amplifier, that offer rail-to-rail inputs / outputs and single supply operation down to 2.2V. They draw 1.6mA of quiescent supply current while featuring ultra-low distortion (0.0002% THD+N), as well as low input voltage-noise density (15nV/Hz) and low input current noise density (0.5fA/Hz). These features make the devices an ideal choice for applications that require low distortion and/or low noise. These amplifiers have inputs and outputs which swing rail-to-rail and their input common mode voltage range includes ground. The maximum input offset of these amplifiers is less than 5mV.

The TPAD8605 are unity gain stable with a gain-bandwidth of 10MHz. The TPAD8605 is available in SOT23-5 packages. The extended temperature range of -40°C to +125°C over all supply voltages offers additional design flexibility.
