AR1335: 13 MP 1/3" CMOS Image Sensor

欲看完整文档，请参阅数据表。

The AR1335 is a 1/3.2-inch CMOS active-pixel digital image sensor with a pixel array of 4208H x 3120V. The AR1335 digital image sensor, features breakthrough 1.1 μm pixel technology that delivers superior low-light image quality through leading sensitivity, quantum efficiency and linear full well. This allows image quality that rivals digital still cameras. With a sensor architecture focused on low power and a high Chief Ray Angle (CRA) for low Z-heights, the AR1335 is ideal for smartphone and other mobile device applications. It incorporates sophisticated on-chip camera functions such as windowing, mirroring, column and row skip modes, and snapshot mode. It is programmable through a simple two-wire serial interface. The AR1335 sensor can generate full resolution image at up to 30 frames per second (fps) and supports advanced video modes including 4K 30fps, 1080P 60fps and 720P 120fps.

应用框图

For connectivity above:

- Notes:
1. All power supplies should be adequately decoupled; recommended cap values are:
 - 2.7V: 1.0μF and 0.1μF
 - 1.2V: 1.0μF and 0.1μF
 - 1.8V: 1.0μF and 0.1μF
 2. Resistor value 1.5kΩ is recommended, but may be greater for slower two-wire speed.
 3. This pull-up resistor is not required if the controller drives a valid logic level on SCLK at all times.
 4. V_{AA} and V_{AA_PIX} must be tied together.
 5. Internal charge pump is used for OTPM programming.
 6. Digital and MIPI supply can be tied together.
 7. ATEST1/ATEST2 must be left floating.
 8. TEST pin must be tied to D_{GND}.
 9. V_{DD_SLVS} must be connected to D_{GND} through a bypass cap (0.1μF).
