Three-Phase Direct PWM Brushless Motor Driver

Overview

The LB11620GP is a direct PWM drive pre-driver IC that is optimal for three-phase power brushless motors. A motor driver circuit with the desired output capability (voltage and current) can be implemented by adding discrete transistors or other power devices to the outputs of this IC. Since the LB11620GP is provided in a miniature package, it is also appropriate for use with miniature motors as well.

Features

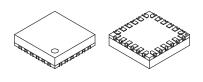

- Three-phase bipolar drive
- Direct PWM drive (input of either a control voltage or a variable-duty PWM signal)
- Built-in forward/reverse switching circuit
- 5V regulator output (VREG pin)
- Built-in current limiter circuit (0.25V (typical) reference voltage)
- Built-in under voltage protection circuit
- Built-in automatic recovery type constraint protection circuit (ON: OFF=1: 18) with protection operating state discrimination output (RD pin)
- Hall signal pulse outputs

Typical Applications

- Server
- Home appliance

XXXXX = Specific Device Code Y = Year M = Month DDD = Additional Traceability Data

*This information is generic. Please refer to device data sheet for actual part marking. Pb-Free indicator, "G" or microdot " •", may or may not be present.

ORDERING INFORMATION

Ordering Code: LB11620GP-TE-L-H

Package VCT24 (Pb-Free / Halogen Free)

Shipping (Qty / packing) 2000 / Tape & Reel

† For information on tape and reel specifications, including part orientation and tape sizes, please refer to our Tape and Reel Packaging Specifications Brochure, BRD8011/D. http://www.onsemi.com/pub_link/Collateral/BRD8011-D.PDF

Specifications

MAXIMUM RATINGS / $Ta = 25^{\circ}C$ (Note 1)

Parameter	Symbol	Conditions	Ratings	Unit
Supply voltage 1	V _{CC} max	V _{CC} pin	18	V
Output current	I _O max	UL, VL, WL, UH, VH, WH pins	30	mA
Allowable power dissipation	Pd max	*Mounted on a circuit board.	1.0	W
Operating temperature	Topr		-30 to +100	°C
Storage temperature	Tstg		-55 to +150	°C

1. Stresses exceeding those listed in the Absolute Maximum Rating table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

2. Mounted on a circuit board: 40.0mm×50.0mm×0.8mm, glass epoxy board.

RECOMMENDED OPERATING RANGES at Ta = 25°C (Note 3)

Parameter	Symbol	Conditions	Ratings	Unit
Supply voltage range 1-1	V _{CC} 1-1	V _{CC} pin	8 to 17	V
Supply voltage range 1-2	V _{CC} 1-2	V_{CC} pin, with V_{CC} shorted to VREG	4.5 to 5.5	V
Output current	IO	UL, VL, WL, UH, VH, WH pins	25	mA
5 V constant voltage output current	IREG		-30	mA
HP pin voltage	VHP		0 to 17	V
HP pin output current	IHP		0 to 15	mA
RD pin voltage	VRD		0 to 17	V
RD pin output current	IRD		0 to 15	mA

3. Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

ELECTRICAL CHARACTERISTICS at $Ta = 25^{\circ}C$, $V_{CC} = 12V$ (Note 4)

Pin Assignment

							0.1	4m : :4
		F/R = "L"			F/R="H"		Ou	tput
	IN1	IN2	IN3	IN1	IN2	IN3	PWM	
1	Н	L	Н	L	Н	L	VH	UL
2	Н	L	L	L	Н	Н	WH	UL
3	Н	Н	L	L	L	Н	WH	VL
4	L	Н	L	Н	L	Н	UH	VL
5	L	Н	Н	Н	L	L	UH	WL
6	L	L	Н	Н	Н	L	VH	WL

• Three-Phase Logic Truth Table (IN = "H" indicates the state where $IN^+ > IN^-$)

PWMIN pin

Input state	State
High or open	Output off
Low	Output on

If the PWM pin is not used, the input must be held at the low level.

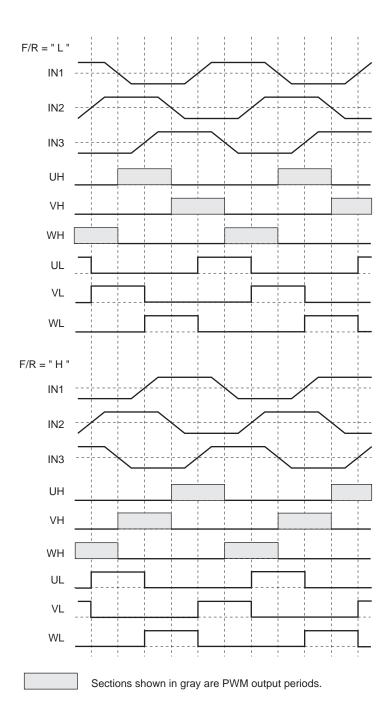

• N1 pin

Input state	HP output
High or open	Three Hall sensor synthesized output
Low	Single Hall sensor output

Explanation of Pin Functions

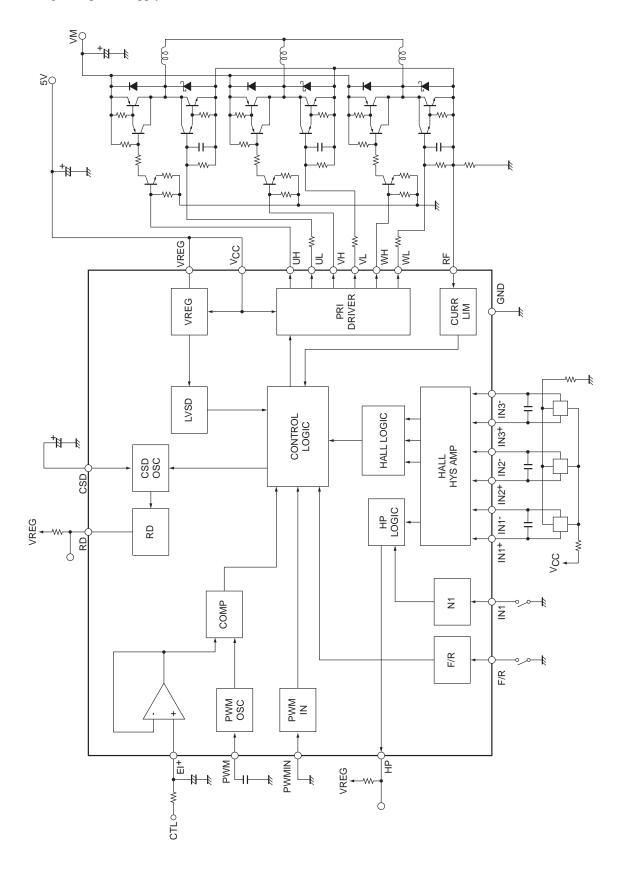

Pin No.	Pin	Description			
1, 24	IN1+, IN1-	Hall sensor inputs from each motor phase.			
3, 2	IN2+, IN2-	The logic high state indicates that $IN^+ > IN^-$.			
5, 4	IN3+, IN3-	If inputs are provided by a Hall effect sensor IC, the common-mode input range is expanded by biasing either the + or -			
		input.			
6	PWM	Functions as both the PWM oscillator frequency setting pin and the initial reset pulse setting pin. Connect a capacitor			
		between this pin and ground.			
7	RD	Lock (motor constrained) detection state output. This output is turned on when the motor is turning and off when the lock			
		protection function detects that the motor has been stopped. This is an open collector output.			
8	CSD	Sets the operating time for the lock protection circuit.			
		Connect a capacitor between this pin and ground. Connect this pin to ground if the lock protection function is not used.			
9	PWMIN	PWM pulse signal input. The output goes to the drive state when this pin is low and to the off state when this pin is high			
		or open. To use this pin for control, a CTL amplifier input such that the TOC pin voltage goes to the 100% duty state			
		must be provided.			
10	F/R	Forward/reverse control input			
11	HP	Hall signal output (HP output). This provides either a single Hall sensor output or a synthesized 3-sensor output.			
12	N1	Hall signal output (HP output) selection			
13	El+	CTL amplifier + (no inverting) input. The PWMIN pin must be held at the low level to use this input for motor control			
14	VREG	5V regulator output (Used as the control circuit power supply. A low-voltage protection circuit is built in.)			
		Connect a capacitor between this pin and ground for stabilization.			
15	V _{CC}	Power supply. Connect a capacitor between this pin and ground to prevent noise and other disturbances from affecting			
		this IC.			
16	GND	Ground			
17	RF	Output current detection. The current detection resistor (Rf) voltage is sensed by the RF pin to implement current			
		detection.			
		The maximum output current is set by RF to be IOUT = 0.25/Rf.			
22	UH	Outputs (PWM outputs).			
20	VH	These are push-pull outputs.			
18	WH				
23	UL	Outputs			
21	VL	These are push-pull outputs.			
19	WL
