WE ENGINEER

The Sustainable Future.

Our Customers inspire us to create, develop and market advanced integrated circuits primarily used in automotive electronics systems. Hundreds of vehicle models worldwide have Melexis products designed into critical systems working with exceptional reliability under very extreme conditions.

Helping Cars Go Green

Melexis integrated circuits deliver greener, more environmentally friendly automotive systems and technology. Reduced fuel consumption and lower emissions result directly from improvements in IC and IC sensor technologies created for our customers. Our commitment to environmental concern is further demonstrated in the design of our newest expansion at our Leper Belgium site. This development and manufacturing site incorporates renewable energy generation and sustainable design practices.

Innovation and Customer Orientation

As a partner to our customers Melexis strives to focus innovation on technology with value for our customer's customer. Looking beyond the component level to better understand how our parts make a difference in modules, systems, the car and the environment.

Eliminating the PCB in module assemblies, reducing the component counts for LIN Bus nodes, eliminating the need for sensors in motor controls are all examples of how the applications focus drives product improvement to benefit our customer's customer.

The resulting sensors for the automotive electronics market focus on magnetic, optical, infrared, MEMS pressure, gyroscope and accelerometers.

Our sensor interface ICs set the standard for price efficiency and performance in demanding automotive application. Night vision CMOS cameras enable world class safety and ADAS systems. We can support network protocols like LIN and GM-LAN with system basis ICs and intelligent integrated sensor/actuator solutions. Advanced BLDC motor driver technologies are revolutionizing actuators, pumps and belt driven accessories. Our other products include ISM transceivers, receivers and transmitters for all RF or RFID needs.

At Melexis, We Care For Our Customers

Customer focus and a consistent strategic vision have been the foundation of Melexis' growth. Innovative, dynamic teams from across Melexis' global organization are embracing the core values and no-nonsense culture to continue delivering solid financial results. This profitable and stable structure enables us to research and present inflection point technology advances for the benefit of our present and future customers. Melexis will continue its commitment in the automotive market and at the same time expand its presence in other fields of application, leveraging its organizational tools and team spirit.

What Can We Do For YOU ?

Melexis technology and know-how has led to market leading positions in non-automotive arenas including RF transmitters, receivers and transceivers, single chip cooling fan ICs, infrared remote control ICs and power supply control chips for cell phone chargers. A customer oriented approach and an innovative design methodology have allowed our customers to win significant and in certain cases dominant market positions. Melexis' main products continue to be Hall effect ICs (magnetic sensors), Pressure and Acceleration Sensors, Sensor Interface ICs, Automotive Systems-on-a-Chip, Embedded Microcontrollers, Wireless Communication ICs, Bus System Chips, Optical and Infrared sensors. In each case the products are primarily developed for automotive applications with subsequent use in commercial and industrial applications.

Automotive Specialist

The data shows that the market for semiconductors in the automotive sector continues to provide solid growth opportunities. The share of electronics in cars is still growing and these electronics enable car manufacturers to differentiate themselves with their types and models with regard to safety, environmental impact, performance or comfort. Developing advanced, integrated applications and solutions for this sector will certainly continue to be the Melexis core business.

Leadership In Semiconductor Solutions

Melexis has a good team of experienced engineers. Due to their expertise in product definition, design and the testing of integrated analog-digital semiconductor solutions and sensor ICs Melexis has achieved a leadership position.

At Melexis, we make the difference. Many of our loyal customers know this and appreciate it. Our Customers know Melexis is not a "run of the mill" company. They know it as a stable, solid, successful organization with a strong financial position. A company which takes pleasure in working towards integrated solutions, and in doing so makes an essential contribution to the success of its customers in their respective markets and submarkets, whether in the long-standing automotive market, or in consumer electronics, and industrial or medical applications. Melexis appreciates that it's the small things that can make a big difference.

Motor Control

Automotive electronics are a means to respond to volatile oil prices, requests for material savings and environmental requirements. Electric motors allow the upgrading of functional units, such as water pumps and oil pumps, from full-time mechanical drive by the engine to on-demand electric drive. This results in reducing CO₂ emissions, improved fuel economy and more responsive cars.

To realize these functions in a reliable way, Brushless DC (BLDC) motors controlled in a sensorless manner are the technology of choice. Other functions that see an increase in electronic content due to the shift from a DC motor control to a Sensorless BLDC motor control are fuel pumps and engine cooling fans. Melexis delivers and develops controllers and drivers for these BLDC motors.

Electrically controlled valves are becoming the norm in engine management systems to reduce emissions while maintaining or improving power. This type of electronics under the hood requires high temperature Flash microcontrollers. Melexis responded to this trend already in 2008 with the launch of a unique family of high temperature Flash products for DC and BLDC motor control. The high integration of Melexis motor controllers enables our customers to slash the component count in their mechatronic solutions from 100 to less than 50, leading the path to high quality, compact cost effective and environmental friendly high volume solutions.

LIN

The growing functionality in cars also results in an increase in human interactions. Former simple things like switch modules have to become more intelligent in order to reduce wiring effort and to save copper. In today's vehicle architecture, these switch modules are therefore no longer directly wired, but they will be connected to a LIN bus system (Local Interconnect network).

Melexis launched a new chip family of intelligent network capable switch controllers called "UniROM Switch Slaves" to support this trend and to keep the development effort as low as possible. This family of chips accomplishes a unique combination of hardware and software. It is a perfect example of how thoughtful application of technology can remove the need for software development and qualifications. UniROM switch slaves for LIN networks can be found in switch modules on the steering wheel, in the car door, in the car roof and in the center console.

The LIN bus system is also used more often for different kinds of applications such as intelligent sensors or actuators.

LIN applications may be realized with discrete microcontrollers. In such implementations, a System Basis IC (SBC) is required to provide the physical bus interface functionality. SBC's simplify our customer's development efforts and decrease module cost. This enables the deployment of LIN bus control for a wider range of applications.

Optical & Temperature Sensors

ActiveLight Interface IC for Proximity and Simple Gesture Sensing

Proximity sensors can be highly effective for supplementing touch-based Human-Machine Interfaces. With single-zone and multi-zone proximity sensing, engineers are presented with a way to implement more intuitive and safe user experiences. Applications for this technology include:

- Proximity Detection
- Simple Gesture Recognition, (simple swipes)
- Driver/Passenger Discrimination, such as infotainment options deemed too distracting for the driver allowing passenger-only to access.
- Circular Gesture Detection

Melexis has developed a series of highly robust sensor interface ICs. Based on CMOS process technology, the MLX75030 and MLX75031 ActiveLight proximity and simple gesture detection ICs feature proprietary integrated ambient light suppression technology, making them highly tolerant to the effects of static and dynamically varying background light. Furthermore it has proven electro-magnetic compliance, plus a small footprint that is highly suited to space-constrained designs.

Automotive Imagers

Camera systems in cars are a fast growing market. Melexis focuses on imagers where specific automotive features like High Dynamic Range, high (night time) sensitivity and automotive robustness are important.

Automotive driver assistance (ADAS) and vision enhancement systems dramatically improve road safety by proactively alerting the driver of potential dangers.

With the high dynamic range, and on-chip automatic exposure control and display viewing function, the Melexis image sensor solutions offer the highest performance solution for these application needs.

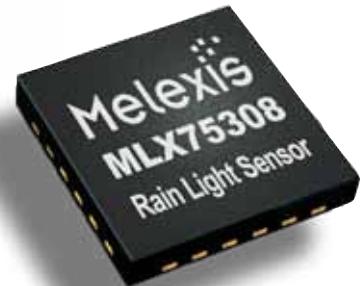

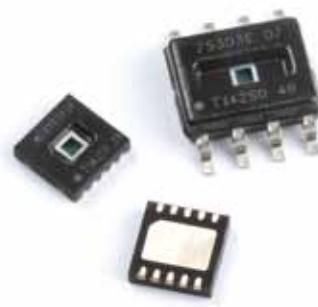

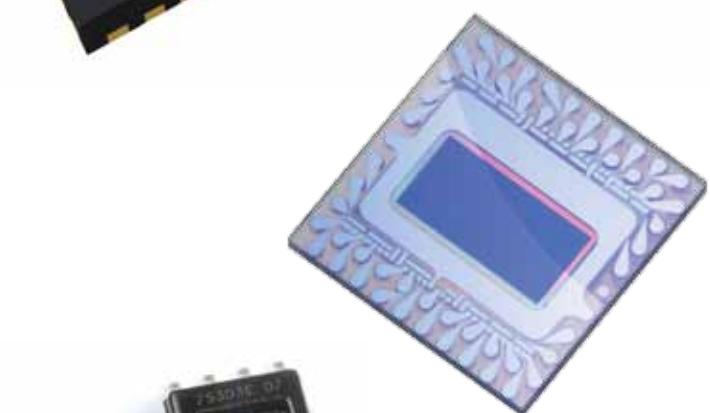

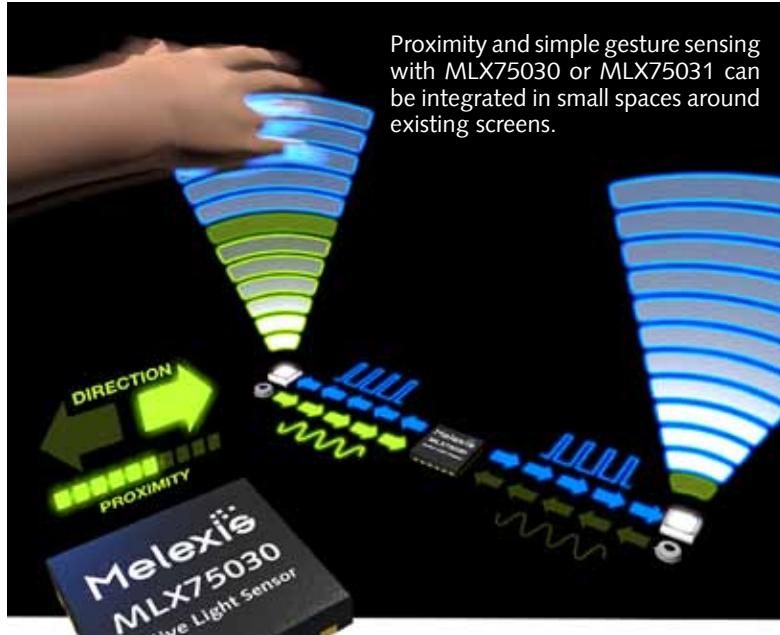

The SensorEyeC Family

The SensorEyeC family offers customers a specific solution for their application needs: optical switching, optical high-dynamic range measuring and a highly sensitive, linear light-to-voltage sensor.

Rainlight Sensors

In the never-ending quest for higher comfort and safety, several years ago, automatic light and wipers were introduced by many OEMs. Sufficient visibility for the driver under all (dynamic) circumstances is very important, therefore this automatic rain & light control is considered to be a safety-function.

Thanks to the high level of integration, high performance and rich application features the devices offer, the Melexis Rainlight interface solution, will be the reference in the market for this application.

Intelligent Infrared Thermometers

Melexis continues to expand the product line of intelligent Infrared thermometers by introducing new versions with very narrow Field Of View and medical grade accuracy. Main applications are in forehead thermometers and fever screening equipment. These sensors still offer the same high accuracy, wide temperature range and ease-of-use of the basic device. The market experiences an increased use of Infrared thermometers in the automotive and medical sector as well as consumer medical applications.

Melexis recently launched an intelligent sensor specifically targeted at professional, high range temperature guns. The sensor can measure temperatures up to 1030°C and features an optical filter specifically suited for high temperature measurements and measurements with a long distance between object and thermometer gun. The main advantage this part offers is the electronic stabilization feature also present in our general product line, now also available for high temperature ranges.

FIRRay

Melexis introduced the world's first monolithic integrated 16X4 active pixel thermopile array, which measures the temperature in 64 distinct points simultaneously up to 256Hz. The FIRRay can be used for air conditioning applications, blind spot detection, occupancy detection, intrusion detection, people counting and consumer applications like microwave ovens and energy efficient room air conditioners.

Sensors

Hall effect Sensors

Melexis is a recognized world leader for magnetic sensing devices, mainly based on the Hall effect. Typical uses are for movement, position and speed sensing and also current sensing. Magnetic sensors perform contactless measurements and are therefore immune to wear, dust, dirt, humidity and vibration.

Millions of Melexis Hall ICs are used in cars today for: Sensing pedal, throttle and steering wheel position, steering torque and transmission shifter, sensing rotation of the cam- and crank-shafts in engines, monitoring movement in motors and actuators, measuring the current flowing from and to the battery. Other high volume applications for Hall ICs include mobile telephony, gaming, computing, personal portable devices and automation equipment.

Melexis markets a patented Hall technology under the brand Triaxis®. This technology enables the realization of cutting edge contactless magnetic position sensors. Triaxis® ICs are designed in rotary, linear and 3D-joystick position sensors. The final products are used to improve the fuel efficiency, reduce the engine emission, improve the transmission, enhance the vehicle stability control and increase the performances of mechatronic systems (serving applications such as steering, braking or shifting).

For instance, Triaxis® technology enables Melexis to actively contribute to innovative programs such as "engine down-sizing", "start/stop" or "robotized gearbox" introduced by the vehicle manufacturers across the world.

Human-machine interface (HMI) applications are also addressed by Triaxis® ICs: they enable novel generation of smart shifters (manual and automatic transmission) or controllers for entertainment systems.

Triaxis® technology is also used for advanced current sensors whose market growth is linked to the increase of electrical systems in today's vehicles as well as the positive trend for hybrid and electrical powertrain.

Melexis portfolio of magnetic sensors offers solutions for robust and reliable contactless switches replacing the traditional mechanical switches for various applications such as seat belt buckle, brake and clutch pedals, wiper and window lift motors.

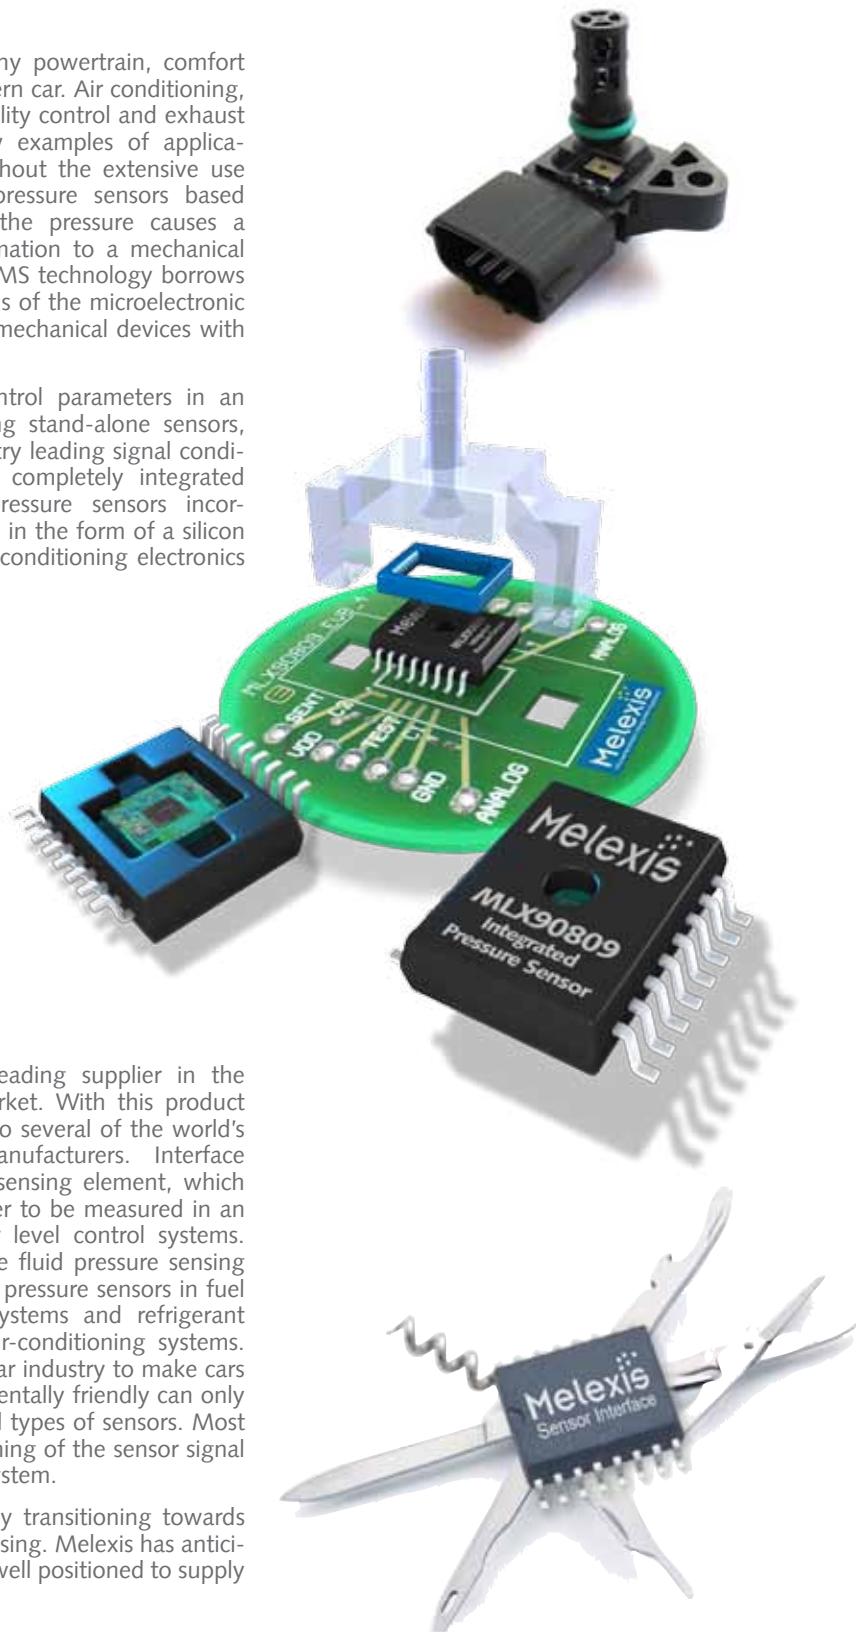

The Triaxis logo consists of the word "Triaxis" in a bold, black, sans-serif font. A blue circle containing three yellow arrows (one pointing up, one pointing down, and one pointing right) is positioned between the "T" and the "x". A small "TM" symbol is located at the top right of the "x".

Pressure Sensors

Sensors are the enablers of many powertrain, comfort and safety applications in a modern car. Air conditioning, diesel particle filters, vehicle stability control and exhaust after treatment are only a few examples of applications that simply can't exist without the extensive use of sensors. Melexis develops pressure sensors based on MEMS technology, where the pressure causes a temporary and reversible deformation to a mechanical structure etched into the IC. MEMS technology borrows the batch manufacturing methods of the microelectronic industry to produce micro-scale mechanical devices with outstanding performance.

Pressure is one of the key control parameters in an automobile. It is measured using stand-alone sensors, for which Melexis supplies industry leading signal conditioning interface ICs, or using completely integrated pressure sensors. Integrated pressure sensors incorporate both the sensing element, in the form of a silicon deformable membrane, and the conditioning electronics on the same chip.

Sensor Interface ICs

Melexis continues to be the leading supplier in the automotive segment of this market. With this product line it is an established supplier to several of the world's largest automotive sensor manufacturers. Interface ICs form the link between the sensing element, which transforms the physical parameter to be measured in an electrical signal, and the higher level control systems. Typical applications include brake fluid pressure sensing in Antilock Braking Systems, fuel pressure sensors in fuel economy enhancing injection systems and refrigerant liquid pressure in automotive air-conditioning systems. The challenges imposed on the car industry to make cars more fuel efficient and environmentally friendly can only be met by an extensive use of all types of sensors. Most types of sensors require conditioning of the sensor signal in order to be used in a control system.

The automotive market is rapidly transitioning towards more digitally based signal processing. Melexis has anticipated this trend and is therefore well positioned to supply appropriate solutions.

PTC04	Programmer for Melexis PTC devices: 90215, 90244, 90251, 90277 with additional Board: 90316, 90264, 90275 and Microcontroller Products	Main board; PTC04-DB-HALL01 in metal case, Power supply 100W switching adapter, USB and RS232 cable, CD
PTC04-DB-Calib	Supporting daughter board for calibration of PTC04 programmer	Additional board to mount into a PTC04
PTC04-DB-Hall02	Supporting daughter board to program 90275, 90264 on a PTC04 programmer	Additional board to mount into a PTC04
PTC04-DB-Hall03	Daughter board for mounting in PTC-04 programmer. Needed for devices : MLX90288; MLX34102	Additional board to mount into PTC04
PTC04-DB-90316	Daughter board for PTC-04 programmer for MLX90316 Hall sensor	Additional board to mount into PTC04
PTC04-DB-922xx	Supporting daughter board to interface with the programmable switch & latch family	Additional board to mount into PTC04
PTC04-DB-DEBUG	Universal debugging daughter board	Additional board to mount into PTC04
PTC-testbench MLX90316	Testbench for MLX90316	Additional board to mount into PTC04
PTC-testbench magnetic	Testbench for magnetic devices	Includes 2 magnets and socket for MLX90316"
PTC04-DB-FL	Supporting daughter board board for supporting LIN products on a PTC04 programmer	Additional board to mount into PTC04
PTC04-DB-Pressure01	Daughter board for mounting in PTC-04 programmer	Needed for devices MLX90807, MLX90808, MLX90320, MLX90328
PTC04 Sensor Multi Calibration Board	Allows calibration of sensors in parallel	Extension board for PTC-04

Wireless

For more than ten years, the Wireless Business Unit of Melexis successfully brought short range connectivity and identification solutions to the markets with its leading edge RF and RFID ICs. The frequency coverage of our wireless products is from a few kHz up to 950MHz.

Our latest product generation brings even more innovation to our customers and provides them with highly integrated solutions. In the automotive area, our Wireless products are widely used in Remote/Passive Keyless Entry (RKE/PKE) and Tire Pressure Monitoring Systems (TPMS). Beside providing regular automotive qualified RF transmitters and receivers, RFID immobilizers, Near Field Communication (NFC) transceivers and pressure sensors,

Melexis combines these RF, RFID, sensing and high voltage technologies into unique "systems on chip". Thus, we are providing our customers with highly differentiated products. Melexis pushes for a wider standardization of radio protocols as well as of encryption algorithms for RKE/ PKE/ TPMS.

Our objective is to reduce system cost and to increase the inter-operability of radio chips. In industrial markets, we provide our ICs in home and building automation equipment like garage door openers, security systems, access control and Automatic Meter Reading (AMR).

In the consumer market, our RFICs are used in remote controls and our RFID technology is successfully integrated in NFC platforms for mobile phones.

Our new targeted field is the medical sector for which we provide high-end medical monitoring and control solutions.

An open mindset to understand our customer challenges and provide valuable support, a strong system and application knowledge, a large capabilities spectrum to convert requirements into "systems on chip" are part of our core competencies.

Combined with the sensing expertise available within Melexis, the Wireless Business Unit builds a market leading position in the Wireless Sensing area.

1. Prefix

This is a 2-3 character alphabetic prefix

2. Product Family

The product family is a 2-5 digit numeric code, which denotes the circuit, or product family.

3. Temperature Code (Refer To Table 1)

The one-character temperature range denotes standard operating temperature ranges.

4. Package Code (Refer to Table 3A thru Table 3C)

Melexis uses a two-character alpha package code, which denotes the type of package the chip is molded (or assembled) in.

5. Option Code (Refer to Product Datasheet on www.melexis.com)

The option code is a two part code, designed to denote any special information related to the device. The option code will be in the form of 6 alpha-numeric characters separated by a (-) hyphen. (000-000 to ZZZ-ZZZ)

This code is non-rigid, and will have no standard lookup table for reference. For full description of the option code on any particular product, please refer to the product datasheet on www.melexis.com.

6. Packing Form Code (Refer To Table 2)

The Packing Form Code is a code which denotes how the product will be packed for shipping to the end user. Melexis products are available in various packing forms, such as bulk, tape-on reel, tube, etc. Some products are available in more than one packing form to accommodate end user production tooling.
