CROSS REFERENCE NOTES:

- 1.) Cross referenced fans are rarely “exact”. The most important aspects of finding a suitable cross are frame size and mounting dimensions, voltage, air flow (CFM), and noise (dB). All performance data is +/- 10%.
- 2.) With careful consideration, a replacement fan will match the original fan in terms of form, fit, and function.
- 3.) Sealed sleeve bearings are an excellent and cost effective alternative to both ball bearing and standard sleeve bearing in terms of durability and performance. Sealed sleeve fans typically fall between standard sleeve and ball with regards to cost, life expectancy, and heat tolerance characteristics.
- 4.) If you cannot find your fan on our cross reference give us a call at 214-340-0265 or 800-323-2439. We are continuously updating, improving, and adding to our product offering.
- 5.) If you have any questions or require assistance interpreting our cross reference please contact us and our sales engineers will be happy to help.
