

Watertight Enclosures to Customized Design

Rose+Bopla offers a full range of services to create a custom design from our standard enclosures, all without expensive tooling. Whether your project requires machining, painting, powdercoating, screenprinting, membrane keypads, or component assembly, Rose+Bopla can add unique features to your electronic devices. Rose+Bopla offers one of the largest selections of watertight enclosures in the industry that are ideal for customized designs. Available in Aluminum, Stainless Steel, Fiberglass, Polycarbonate, ABS, and Polystyrene, these standard enclosures are routinely specified for both watertight and dust-tight applications. Use them as housings for stand-alone instruments, junction boxes, hand-helds, or wall-mounted in a series as part of an integrated process control system. Some are even available with clear lids for protected viewing. Ingress protection up to IP66.
