DO-214AA(SMB)

### General Information

PLED Series protectors are electronic shunts that provide a current bypass when an LED element in an LED string fails open circuit. This ensures the remaining string of LEDs will continue to function. There are many cases where high reliability of the LED lighting must be maintained, such as LCD backlighting, transport lighting, avionics, intrinsically safe and low maintenance lighting.

The PLED Series is available in surface mount package DO-214AA (SMB) size format.

Typical Application

Note: The interaction between the YENJI ® PLED device and the power supply for the LED string dictates the power supply architecture. Proper care must be taken in the design of the power supply architecture to ensure that the YENJI ® PLED devices operate as intended and the design maintains integrity.
