Tailored to your needs

STM32™ Ultra-low-power

STM32 Ultra-low-power DNA Arm® Cortex®-M0+

The STM32L0 is the best match for energy harvesting, coin-cell battery or energy sensitive applications. Combining a genuine ultra-low-power architecture with low-current analog peripherals and four low-power modes, the STM32L0 is ideal for applications such as mice, keyboards, gas/water meters, building automation, alarm detectors and health care or fitness applications. For applications that require a 15- to 20-year life duration or need to run in extremely high temperature conditions, the STM32L0 is the best choice thanks to ST's CMOS process technology.
