## Description

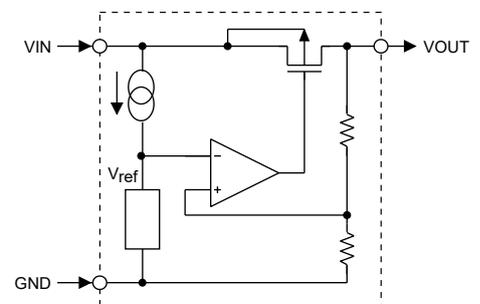

The PJ75ALXXSA series is a set of three-terminal low power high voltage regulators implemented in CMOS technology. They allow input voltages as high as 36V. They are available with several fixed output voltages ranging from 2.8V to 5.0V. Because of the low power dissipation, PJ75ALXXSA are widely used in a variety of equipment such as audio device, video device, communication device and so on.

## Features

- ◆ Low power consumption
- ◆ Low voltage drop
- ◆ Low temperature coefficient
- ◆ High input voltage (up to 36V)
- ◆ Quiescent current : 2.5 $\mu$ A
- ◆ Output voltage tolerance:  $\pm$ 2%
- ◆ HAF(halogen and antimony free) is acquired

## Absolute Maximum Ratings <sup>Note1</sup>

Ratings at 25°C ambient temperature unless otherwise specified.

Parameter	Limit	Unit
Supply voltage	-0.3 ~ +36	V
Storage temperature range	-50 ~ +125	°C
Operating temperature range	-40 ~ 85	°C

**Note:** 1. Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
