

DAC0800/DAC0802 8-Bit Digital-to-Analog Converters

Check for Samples: [DAC0800](#), [DAC0802](#)

FEATURES

- **Fast Settling Output Current:** 100 ns
- **Full Scale Error:** ± 1 LSB
- **Nonlinearity Over Temperature:** $\pm 0.1\%$
- **Full Scale Current Drift:** ± 10 ppm/ $^{\circ}\text{C}$
- **High Output Compliance:** -10V to $+18\text{V}$
- **Complementary Current Outputs**
- **Interface Directly with TTL, CMOS, PMOS and Others**
- **2 Quadrant Wide Range Multiplying Capability**
- **Wide Power Supply Range:** $\pm 4.5\text{V}$ to $\pm 18\text{V}$
- **Low Power Consumption:** 33 mW at $\pm 5\text{V}$
- **Low Cost**

DESCRIPTION

The DAC0800 series are monolithic 8-bit high-speed current-output digital-to-analog converters (DAC) featuring typical settling times of 100 ns. When used as a multiplying DAC, monotonic performance over a 40 to 1 reference current range is possible. The DAC0800 series also features high compliance complementary current outputs to allow differential output voltages of 20 V_{p-p} with simple resistor loads. The reference-to-full-scale current matching of better than ± 1 LSB eliminates the need for full-scale trims in most applications, while the nonlinearities of better than $\pm 0.1\%$ over temperature minimizes system error accumulations.

The noise immune inputs will accept a variety of logic levels. The performance and characteristics of the device are essentially unchanged over the $\pm 4.5\text{V}$ to $\pm 18\text{V}$ power supply range and power consumption at only 33 mW with $\pm 5\text{V}$ supplies is independent of logic input levels.

The DAC0800, DAC0802, DAC0800C and DAC0802C are a direct replacement for the DAC-08, DAC-08A, DAC-08C, and DAC-08H, respectively. For single supply operation, refer to AN-1525.

Typical Application

Pin numbers represent the PDIP package. The SOIC package pin numbers differ from that of the PDIP package.

Figure 1. ± 20 V_{p-p} Output Digital-to-Analog Converter

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Absolute Maximum Ratings ⁽¹⁾

Supply Voltage ($V^+ - V^-$)	$\pm 18V$ or $36V$
Power Dissipation ⁽²⁾	500 mW
Reference Input Differential Voltage (V14 to V15)	V^- to V^+
Reference Input Common-Mode Range (V14, V15)	V^- to V^+
Reference Input Current	5 mA
Logic Inputs	V^- to V^- plus $36V$
Analog Current Outputs ($V_{S^-} = -15V$)	4.25 mA
ESD Susceptibility ⁽³⁾	TBD V
Storage Temperature	$-65^\circ C$ to $+150^\circ C$
Lead Temp. (Soldering, 10 seconds)	
PDIP Package (plastic)	$260^\circ C$
CDIP Package (ceramic)	$300^\circ C$
Surface Mount Package	
Vapor Phase (60 seconds)	$215^\circ C$
Infrared (15 seconds)	$220^\circ C$

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. DC and AC electrical specifications do not apply when operating the device beyond its specified operating conditions.
- (2) The maximum junction temperature of the DAC0800 and DAC0802 is $125^\circ C$. For operating at elevated temperatures, devices in the CDIP package must be derated based on a thermal resistance of $100^\circ C/W$, junction-to-ambient, $175^\circ C/W$ for the molded PDIP package and $100^\circ C/W$ for the SOIC package.
- (3) Human body model, 100 pF discharged through a 1.5 k Ω resistor.

Operating Conditions ⁽¹⁾

	Min	Max	Units
Temperature (T_A)			
DAC0800L	-55	+125	$^\circ C$
DAC0800LC	0	+70	$^\circ C$
DAC0802LC	0	+70	$^\circ C$
V^+	$(V^-) + 10$	$(V^-) + 30$	V
V^-	-15	-5	V
I_{REF} ($V^- = -5V$)	1	2	mA
I_{REF} ($V^- = -15V$)	1	4	mA

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. DC and AC electrical specifications do not apply when operating the device beyond its specified operating conditions.

Electrical Characteristics

The following specifications apply for $V_S = \pm 15V$, $I_{REF} = 2\text{ mA}$ and $T_{MIN} \leq T_A \leq T_{MAX}$ unless otherwise specified. Output characteristics refer to both I_{OUT} and \bar{I}_{OUT} .

TYPICAL APPLICATIONS

Pin numbers represent the PDIP package. The SOIC package pin numbers differ from that of the PDIP package.

$$I_{FS} \approx \frac{+V_{REF}}{R_{REF}} \times \frac{255}{256}$$

$I_O + \bar{I}_O = I_{FS}$ for all logic states

For fixed reference, TTL operation, typical values are:

$V_{REF} = 10.000V$

$R_{REF} = 5.000k$

$R15 \approx R_{REF}$

$C_C = 0.01 \mu F$

$V_{LC} = 0V$ (Ground)

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.
