

MUX36xxx 36-V, low-capacitance, low-leakage-current, precision, analog multiplexers

1 Features

- Low On-Capacitance
 - MUX36S08: 9.4 pF
 - MUX36D04: 6.7 pF
- Low Input Leakage: 1 pA
- Low Charge Injection: 0.3 pC
- Rail-to-Rail Operation
- Wide Supply Range: ± 5 V to ± 18 V, 10 V to 36 V
- Low On-Resistance: 125 Ω
- Transition Time: 92 ns
- Break-Before-Make Switching Action
- EN Pin Connectable to V_{DD}
- Logic Levels: 2 V to V_{DD}
- Low Supply Current: 45 μ A
- ESD Protection HBM: 2000 V
- Industry-Standard TSSOP and smaller WQFN Package
- For Other Configurations, Refer to:
 - [TMUX6111/ 12/ 13](#) (4 ch. SPST)
 - [TMUX6121/ 22/ 23](#) (2 ch. SPST)
 - [TMUX6119](#) (1 ch. SPDT)
 - [TMUX6136](#) (2 ch. SPDT)
 - [TMUX6104](#) (1 ch. 4:1)

2 Applications

- Factory Automation and Industrial Process Controls
- Programmable Logic Controllers (PLC)
- Analog Input Modules
- ATE Test Equipment
- Battery Monitoring Systems

Simplified Schematic

3 Description

The MUX36S08 and MUX36D04 (MUX36xxx) are modern complementary metal-oxide semiconductor (CMOS) analog multiplexers (muxes). The MUX36S08 offers 8:1 single-ended channels, whereas the MUX36D04 offers differential 4:1 or dual 4:1 single-ended channels. The MUX36S08 and MUX36D04 work equally well with either dual supplies (± 5 V to ± 18 V) or a single supply (10 V to 36 V). They also perform well with symmetric supplies (such as $V_{DD} = 12$ V, $V_{SS} = -12$ V), and unsymmetric supplies (such as $V_{DD} = 12$ V, $V_{SS} = -5$ V). All digital inputs have TTL-logic compatible thresholds, ensuring both TTL and CMOS logic compatibility when operating in the valid supply voltage range.

The MUX36S08 and MUX36D04 have very low on and off leakage currents, allowing these multiplexers to switch signals from high input impedance sources with minimal error. A low supply current of 45 μ A enables use in portable applications.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
MUX36S08	TSSOP (16)	5.00 mm x 4.40 mm
MUX36D04	WQFN (16)	4.00 mm x 4.00 mm

(1) For all available packages, see the package option addendum at the end of the data sheet.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision C (April 2018) to Revision D	Page
• Added <i>Feature</i> : For Other Configurations, Refer to	1
• Added RRJ (WQFN) package option to the MUX36D08	4
• Changed the WQFN S6 pin number From: 19 To: 9	4
• Added the RRJ package option to the MUX36D04	5
• Added WQFN (RRJ) data to <i>Thermal Information</i>	7
• Changed On-resistance drift unit value From: Ω To: $\%/^{\circ}\text{C}$	7
• Changed $I_{DL(ON)}$ unit value From: nA To: pA	7

Changes from Revision B (July 2016) to Revision C	Page
• Added WQFN Package option in Features	1
• Added WQFN package option in Device Information	1
• Changed Description column of MUX36D04 row in <i>Device Comparison Table</i>	4
• Added WQFN (RUM) data to <i>Thermal Information</i>	7
• Changed On-resistance drift TYP value From: 0.52 To: 0.64 in <i>Electrical Characteristics: Dual Supply</i>	7
• Changed Analog Switch, I_D parameter in <i>Electrical Characteristics: Dual Supply</i> table: split parameter into $I_{D(OFF)}$ and $I_{D(ON)}$ parameters, changed symbols, parameter names, and test conditions	7
• Changed Analog Switch, $I_{DL(ON)}$ parameter test conditions in <i>Electrical Characteristics: Dual Supply</i> table	7
• Changed On-resistance drift TYP value From: 0.47 To: 1.13 in <i>Electrical Characteristics: Single Supply</i>	9
• Changed Analog Switch, I_D parameter in <i>Electrical Characteristics: Single Supply</i> table: split parameter into $I_{D(OFF)}$	

and $I_{D(ON)}$ parameters, changed symbols, parameter names, and $I_{D(ON)}$ test conditions	9
• Changed and swapped data between 25°C and 85°C to fix the typo	10
• Changed Figure 30 : changed low-voltage level to 0 V.....	18
• Changed Figure 33 : added 0 V line, flipped V_S supply symbol.....	20
• Changed Figure 37 : changed 5 V_{RMS} marking in <i>Audio Precision</i> box	22
• Changed description of MUX36D04 in <i>Overview</i> section.....	23
• Changed Figure 43 : changed OPA140 amplifier and charge kickback filter box.....	27

Changes from Revision A (January 2016) to Revision B	Page
---	-------------

• Added differential on-leakage current parameter to <i>Electrical Characteristics</i> table	7
• Added <i>Differential On-Leakage Current</i> section.....	17

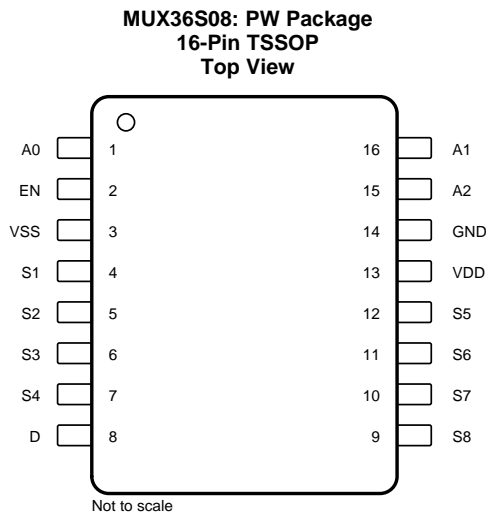

Changes from Original (January 2016) to Revision A	Page
---	-------------

• Changed from product preview to production data	1
---	---

5 Device Comparison Table

PRODUCT	DESCRIPTION
MUX36S08	8-channel, single-ended analog multiplexer (8:1 mux)
MUX36D04	4-channel differential or dual 4:1 single-ended analog multiplexer (8:2 mux)

6 Pin Configuration and Functions

RUM and RRJ have the same package dimension, but different thermal pad dimension and lead finger length.

Pin Functions: MUX36S08

NAME	PIN		FUNCTION	DESCRIPTION
	TSSOP	WQFN		
A0	1	15	Digital input	Address line 0
A1	16	14	Digital input	Address line 1
A2	15	13	Digital input	Address line 2
D	8	6	Analog input or output	Drain pin. Can be an input or output.
EN	2	16	Digital input	Active high digital input. When this pin is low, all switches are turned off. When this pin is high, the A[2:0] logic inputs determine which switch is turned on.
GND	14	12	Power supply	Ground (0 V) reference
S1	4	2	Analog input or output	Source pin 1. Can be an input or output.
S2	5	3	Analog input or output	Source pin 2. Can be an input or output.
S3	6	4	Analog input or output	Source pin 3. Can be an input or output.
S4	7	5	Analog input or output	Source pin 4. Can be an input or output.
S5	12	10	Analog input or output	Source pin 5. Can be an input or output.
S6	11	9	Analog input or output	Source pin 6. Can be an input or output.
S7	10	8	Analog input or output	Source pin 7. Can be an input or output.
S8	9	7	Analog input or output	Source pin 8. Can be an input or output.
VDD	13	11	Power supply	Positive power supply. This pin is the most positive power-supply potential. For reliable operation, connect a decoupling capacitor ranging from 0.1 μF to 10 μF between V_{DD} and GND.
VSS	3	1	Power supply	Negative power supply. This pin is the most negative power-supply potential. In single-supply applications, this pin can be connected to ground. For reliable operation, connect a decoupling capacitor ranging from 0.1 μF to 10 μF between V_{SS} and GND.
Thermal Pad ⁽¹⁾	-	-	Power supply	Exposed Pad. The exposed pad is electrically connected to V_{SS} internally. Connect EP to V_{SS} to achieve rated thermal and ESD performance.

(1) RUM and RRJ have the same package dimension, but different thermal pad dimension and lead finger length.

**MUX36D04: PW Package
16-Pin TSSOP
Top View**

**MUX36D04: RUM and RRJ Package
16-Pin WQFN
Top View**

RUM and RRJ have the same package dimension, but different thermal pad dimension and lead finger length.

Pin Functions: MUX36D04

PIN		FUNCTION	DESCRIPTION
NAME	TSSOP		
A0	1	Digital input	Address line 0
A1	16	Digital input	Address line 1
DA	8	Analog input or output	Drain pin A. Can be an input or output.
DB	9	Analog input or output	Drain pin B. Can be an input or output.
EN	2	Digital input	Active high digital input. When this pin is low, all switches are turned off. When this pin is high, the A[1:0] logic inputs determine which pair of switches is turned on.
GND	15	Power supply	Ground (0 V) reference
S1A	4	Analog input or output	Source pin 1A. Can be an input or output.
S2A	5	Analog input or output	Source pin 2A. Can be an input or output.
S3A	6	Analog input or output	Source pin 3A. Can be an input or output.
S4A	7	Analog input or output	Source pin 4A. Can be an input or output.
S1B	13	Analog input or output	Source pin 1B. Can be an input or output.
S2B	12	Analog input or output	Source pin 2B. Can be an input or output.
S3B	11	Analog input or output	Source pin 3B. Can be an input or output.
S4B	10	Analog input or output	Source pin 4B. Can be an input or output.
V _{DD}	14	Power supply	Positive power supply. This pin is the most positive power supply potential. For reliable operation, connect a decoupling capacitor ranging from 0.1 μ F to 10 μ F between V _{DD} and GND.
V _{SS}	3	Power supply	Negative power supply. This pin is the most negative power supply potential. In single-supply applications, this pin can be connected to ground. For reliable operation, connect a decoupling capacitor ranging from 0.1 μ F to 10 μ F between V _{SS} and GND.
Thermal Pad ⁽¹⁾	-	Power supply	Exposed Pad. The exposed pad is electrically connected to V _{SS} internally. Connect EP to V _{SS} to achieve rated thermal and ESD performance.

(1) RUM and RRJ have the same package dimension, but different thermal pad dimension and lead finger length.

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT	
Voltage	Supply	V_{DD}	-0.3	40	V
		V_{SS}	-40	0.3	
		$V_{DD} - V_{SS}$		40	
	Digital input pins: ⁽²⁾ EN, A0, A1, A2		$V_{SS} - 0.3$	$V_{DD} + 0.3$	V
	Analog input pins: ⁽²⁾ Sx, SxA, SxB, D, DA, DB		$V_{SS} - 2$	$V_{DD} + 2$	V
Current ⁽³⁾		-30	30	mA	
Temperature	Operating, T_A	-55	150	°C	
	Junction, T_J		150		
	Storage, T_{stg}	-65	150		

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) Only one pin at a time

(3) Voltage limits are valid if current is limited to ± 30 mA.

7.2 ESD Ratings

		VALUE	UNIT	
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	± 2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	± 500	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

		MIN	NOM	MAX	UNIT
V_{DD} ⁽¹⁾	Positive power-supply voltage	Dual supply	5	18	V
		Single supply	10	36	
V_{SS} ⁽²⁾	Negative power-supply voltage (dual supply)	-5		-18	V
$V_{DD} - V_{SS}$	Supply voltage	10		36	V
V_S	Source pins voltage ⁽³⁾	V_{SS}		V_{DD}	V
V_D	Drain pins voltage	V_{SS}		V_{DD}	V
V_{EN}	Enable pin voltage	V_{SS}		V_{DD}	V
V_A	Address pins voltage	V_{SS}		V_{DD}	V
I_{CH}	Channel current ($T_A = 25^\circ\text{C}$)	-25		25	mA
T_A	Operating temperature	-40		125	°C

(1) When $V_{SS} = 0$ V, V_{DD} can range from 10 V to 36 V.

(2) V_{DD} and V_{SS} can be any value as long as $10\text{ V} \leq (V_{DD} - V_{SS}) \leq 36\text{ V}$.

(3) V_S is the voltage on all S pins.

7.4 Thermal Information

THERMAL METRIC ⁽¹⁾		MUX36S08 and MUX36D04			UNIT
		PW (TSSOP)	RUM (WQFN)	RRJ (WQFN)	
		16 PINS	16 PINS	16 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	103.8	37.3	46.2	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	36.8	31.6	37.7	°C/W
R _{θJB}	Junction-to-board thermal resistance	49.8	16.2	21.7	°C/W
ψ _{JT}	Junction-to-top characterization parameter	2.7	0.5	0.7	°C/W
ψ _{JB}	Junction-to-board characterization parameter	49.1	16.2	21.7	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	N/A	6.1	6.2	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

7.5 Electrical Characteristics: Dual Supply

at T_A = 25°C, V_{DD} = 15 V, and V_{SS} = -15 V (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT	
ANALOG SWITCH								
Analog signal range		T _A = -40°C to +125°C		V _{SS}		V _{DD}	V	
R _{ON}	On-resistance	V _S = 0 V, I _{CH} = 1 mA			125	170	Ω	
		V _S = ±10 V, I _{CH} = 1 mA	T _A = -40°C to +85°C		145	200	Ω	
			T _A = -40°C to +125°C			250		
ΔR _{ON}	On-resistance mismatch between channels	V _S = ±10 V, I _{CH} = 1 mA			2.4	6	Ω	
		T _A = -40°C to +85°C				9		
		T _A = -40°C to +125°C				11		
R _{FLAT}	On-resistance flatness	V _S = 10 V, 0 V, -10 V			2.4	6	Ω	
		T _A = -40°C to +85°C				53		
		T _A = -40°C to +125°C				58		
On-resistance drift		V _S = 0 V			0.64		%/°C	
I _{S(OFF)}	Input leakage current	Switch state is off, V _S = ±10 V, V _D = ±10 V ⁽¹⁾			-0.04	0.001	0.04	nA
		T _A = -40°C to +85°C			-0.15		0.15	
		T _A = -40°C to +125°C			-1.9		1.9	
I _{D(OFF)}	Output off leakage current	Switch state is off, V _S = ±10 V, V _D = ±10 V ⁽¹⁾			-0.1	0.005	0.1	nA
		T _A = -40°C to +85°C			-0.5		0.5	
		T _A = -40°C to +125°C			-2		2	
I _{D(ON)}	Output on leakage current	Switch state is on, V _D = ±10 V, V _S = floating			-0.1	0.008	0.1	nA
		T _A = -40°C to +85°C			-0.5		0.5	
		T _A = -40°C to +125°C			-3.3		3.3	
I _{DL(ON)}	Differential on-leakage current	Switch state is on, V _{DA} = V _{DB} = ±10 V, V _S = floating			-15	3	15	pA
		T _A = -40°C to +85°C			-100		100	
		T _A = -40°C to +125°C			-500		500	
LOGIC INPUT								
V _{IH}	Logic voltage high			2			V	
V _{IL}	Logic voltage low					0.8	V	

(1) When V_S is positive, V_D is negative, and vice versa.

Electrical Characteristics: Dual Supply (continued)

 at $T_A = 25^\circ\text{C}$, $V_{DD} = 15\text{ V}$, and $V_{SS} = -15\text{ V}$ (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
I_D Input current				0.15	μA
SWITCH DYNAMICS⁽²⁾					
t_{ON} Enable turn-on time	$V_S = \pm 10\text{ V}$, $R_L = 300\ \Omega$, $C_L = 35\text{ pF}$		88	136	ns
		$T_A = -40^\circ\text{C to } +85^\circ\text{C}$		144	
		$T_A = -40^\circ\text{C to } +125^\circ\text{C}$		151	
t_{OFF} Enable turn-off time	$V_S = \pm 10\text{ V}$, $R_L = 300\ \Omega$, $C_L = 35\text{ pF}$		63	75	ns
		$T_A = -40^\circ\text{C to } +85^\circ\text{C}$		83	
		$T_A = -40^\circ\text{C to } +125^\circ\text{C}$		90	
t_t Transition time	$V_S = 10\text{ V}$, $R_L = 300\ \Omega$, $C_L = 35\text{ pF}$		92	143	ns
		$T_A = -40^\circ\text{C to } +85^\circ\text{C}$		151	
		$T_A = -40^\circ\text{C to } +125^\circ\text{C}$		157	
t_{BBM} Break-before-make time delay	$V_S = 10\text{ V}$, $R_L = 300\ \Omega$, $C_L = 35\text{ pF}$, $T_A = -40^\circ\text{C to } +125^\circ\text{C}$	30	54		ns
Q_J Charge injection	$C_L = 1\text{ nF}$, $R_S = 0\ \Omega$	$V_S = 0\text{ V}$	0.3		pC
		$V_S = -15\text{ V to } +15\text{ V}$	± 0.6		
Off-isolation	$R_L = 50\ \Omega$, $V_S = 1\text{ V}_{RMS}$, $f = 1\text{ MHz}$	Nonadjacent channel to D, DA, DB	-96		dB

1	0	0	Channels 1A and 1B
1	0	1	Channels 2A and 2B
1	1	0	Channels 3A and 3B
1	1	1	Channels 4A and 4B

(1) X denotes *don't care*.

8.2 On-Resistance

The on-resistance of the MUX36xxx is the ohmic resistance across the source (Sx, SxA, or SxB) and drain (D, DA, or DB) pins of the device. The on-resistance varies with input voltage and supply voltage. The symbol R_{ON} is used to denote on-resistance. The measurement setup used to measure R_{ON} is shown in Figure 26. Voltage (V) and current (I_{CH}) are measured using this setup, and R_{ON} is computed as shown in Equation 1:

Figure 26. On-Resistance Measurement Setup

$$R_{ON} = V / I_{CH} \quad (1)$$

8.3 Off-Leakage Current

There are two types of leakage currents associated with a switch during the off state:

1. Source off-leakage current
2. Drain off-leakage current

Source leakage current is defined as the leakage current flowing into or out of the source pin when the switch is off. This current is denoted by the symbol $I_{S(OFF)}$.

Drain leakage current is defined as the leakage current flowing into or out of the drain pin when the switch is off. This current is denoted by the symbol $I_{D(OFF)}$.

The setup used to measure both off-leakage currents is shown in Figure 27

Figure 27. Off-Leakage Measurement Setup

8.4 On-Leakage Current

On-leakage current is defined as the leakage current that flows into or out of the drain pin when the switch is in the on state. The source pin is left floating during the measurement. Figure 28 shows the circuit used for measuring the on-leakage current, denoted by $I_{D(ON)}$.

Figure 28. On-Leakage Measurement Setup

8.5 Differential On-Leakage Current

In case of a differential signal, the on-leakage current is defined as the differential leakage current that flows into or out of the drain pins when the switches is in the on state. The source pins are left floating during the measurement. Figure 29 shows the circuit used for measuring the on-leakage current on each signal path, denoted by $I_{DA(ON)}$ and $I_{DB(ON)}$. The absolute difference between these two current is defined as the differential on-leakage current $I_{DL(ON)}$.

Figure 29. Differential On-Leakage Measurement Setup

8.6 Transition Time

Transition time is defined as the time taken by the output of the MUX36xxx to rise or fall to 90% of the transition after the digital address signal has fallen or risen to 50% of the transition. Figure 30 shows the setup used to measure transition time, denoted by the symbol t_t .

Figure 30. Transition-Time Measurement Setup

8.7 Break-Before-Make Delay

Break-before-make delay is a safety feature that prevents two inputs from connecting when the MUX36xxx is switching. The MUX36xxx output first breaks from the on-state switch before making the connection with the next on-state switch. The time delay between the *break* and the *make* is known as break-before-make delay. Figure 31 shows the setup used to measure break-before-make delay, denoted by the symbol t_{BBM} .

Figure 31. Break-Before-Make Delay Measurement Setup

8.8 Turn-On and Turn-Off Time

Turn-on time is defined as the time taken by the output of the MUX36xxx to rise to a 90% final value after the enable signal has risen to a 50% final value. Figure 32 shows the setup used to measure turn-on time. Turn-on time is denoted by the symbol t_{ON} .

Turn off time is defined as the time taken by the output of the MUX36xxx to fall to a 10% initial value after the enable signal has fallen to a 50% initial value. Figure 32 shows the setup used to measure turn-off time. Turn-off time is denoted by the symbol t_{OFF} .

Figure 32. Turn-On and Turn-Off Time Measurement Setup

8.9 Charge Injection

The MUX36xxx have a simple transmission-gate topology. Any mismatch in capacitance between the NMOS and PMOS transistors results in a charge injected into the drain or source during the falling or rising edge of the gate signal. The amount of charge injected into the source or drain of the device is known as charge injection, and is denoted by the symbol Q_{INJ} . Figure 33 shows the setup used to measure charge injection.

Figure 33. Charge-Injection Measurement Setup

8.10 Off Isolation

Off isolation is defined as the voltage at the drain pin (D, DA, or DB) of the MUX36xxx when a 1- V_{RMS} signal is applied to the source pin (Sx, SxA, or SxB) of an off-channel. Figure 34 shows the setup used to measure off isolation. Use Equation 2 to compute off isolation.

Figure 34. Off Isolation Measurement Setup

$$\text{Off Isolation} = 20 \cdot \text{Log} \left(\frac{V_{\text{OUT}}}{V_{\text{S}}} \right) \quad (2)$$

8.11 Channel-to-Channel Crosstalk

Channel-to-channel crosstalk is defined as the voltage at the source pin (Sx, SxA, or SxB) of an off-channel, when a 1- V_{RMS} signal is applied at the source pin of an on-channel. Figure 35 shows the setup used to measure, and Equation 3 is the equation used to compute, channel-to-channel crosstalk.

Figure 35. Channel-to-Channel Crosstalk Measurement Setup

$$\text{Channel-to-Channel Crosstalk} = 20 \cdot \text{Log} \left(\frac{V_{\text{OUT}}}{V_{\text{S}}} \right) \quad (3)$$

8.12 Bandwidth

Bandwidth is defined as the range of frequencies that are attenuated by < 3 dB when the input is applied to the source pin of an on-channel, and the output is measured at the drain pin of the MUX36xxx. Figure 36 shows the setup used to measure bandwidth of the mux. Use Equation 4 to compute the attenuation.

Figure 36. Bandwidth Measurement Setup

$$\text{Attenuation} = 20 \cdot \text{Log} \left(\frac{V_2}{V_1} \right) \tag{4}$$

8.13 THD + Noise

The total harmonic distortion (THD) of a signal is a measurement of the harmonic distortion, and is defined as the ratio of the sum of the powers of all harmonic components to the power of the fundamental frequency at the mux output. The on-resistance of the MUX36xxx varies with the amplitude of the input signal and results in distortion when the drain pin is connected to a low-impedance load. Total harmonic distortion plus noise is denoted as THD+N. Figure 37 shows the setup used to measure THD+N of the MUX36xxx.

Figure 37. THD+N Measurement Setup

9 Detailed Description

9.1 Overview

The MUX36xxx are a family of analog multiplexers. The *Functional Block Diagram* section provides a top-level block diagram of both the MUX36S08 and MUX36D04. The MUX36S08 is an 8-channel, single-ended, analog mux. The MUX36D04 is a 4-channel, differential or dual 4:1, single-ended, analog mux. Each channel is turned on or turned off based on the state of the address lines and enable pin.

9.2 Functional Block Diagram

9.3 Feature Description

9.3.1 Ultralow Leakage Current

The MUX36xxx provide extremely low on- and off-leakage currents. The MUX36xxx are capable of switching signals from high source-impedance inputs into a high input-impedance op amp with minimal offset error because of the ultralow leakage currents. Figure 38 shows typical leakage currents of the MUX36xxx versus temperature.

Figure 38. Leakage Current vs Temperature

9.3.2 Ultralow Charge Injection

The MUX36xxx have a simple transmission gate topology, as shown in Figure 39. Any mismatch in the stray capacitance associated with the NMOS and PMOS causes an output level change whenever the switch is opened or closed.

Figure 39. Transmission Gate Topology

Feature Description (continued)

The MUX36xxx have special charge-injection cancellation circuitry that reduces the source-to-drain charge injection to as low as 0.3 pC at $V_S = 0$ V, and ± 0.6 pC in the full signal range, as shown in Figure 40.

Figure 40. Source-to-Drain Charge Injection vs Source or Drain Voltage

The drain-to-source charge injection becomes important when the device is used as a demultiplexer (demux), where D becomes the input and Sx becomes the output. Figure 41 shows the drain-to-source charge injection across the full signal range.

Figure 41. Drain-to-Source Charge Injection vs Source or Drain Voltage

9.3.3 Bidirectional Operation

The MUX36xxx are operable as both a mux and demux. The source (Sx, SxA, SxB) and drain (D, DA, DB) pins of the MUX36xxx are used either as input or output. Each MUX36xxx channel has very similar characteristics in both directions.

Feature Description (continued)

9.3.4 Rail-to-Rail Operation

The valid analog signal for the MUX36xxx ranges from V_{SS} to V_{DD} . The input signal to the MUX36xxx swings from V_{SS} to V_{DD} without any significant degradation in performance. The on-resistance of the MUX36xxx varies with input signal, as shown in Figure 42

Figure 42. On-Resistance vs Source or Drain Voltage

9.4 Device Functional Modes

When the EN pin of the MUX36xxx is pulled high, one of the switches is closed based on the state of the address lines. When the EN pin is pulled low, all the switches are in an open state irrespective of the state of the address lines. The EN pin can be connected to V_{DD} (as high as 36 V).

10 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

10.1 Application Information

The MUX36xxx family offers outstanding input/output leakage currents and ultralow charge injection. These devices operate up to 36 V, and offer true rail-to-rail input and output. The on-capacitance of the MUX36xxx is very low. These features makes the MUX36xxx a family of precision, robust, high-performance analog multiplexer for high-voltage, industrial applications.

10.2 Typical Application

Figure 43 shows a 16-bit, differential, 4-channel, multiplexed, data-acquisition system. This example is typical in industrial applications that require low distortion and a high-voltage differential input. The circuit uses the ADS8864, a 16-bit, 400-kSPS successive-approximation-resistor (SAR) analog-to-digital converter (ADC), along with a precision, high-voltage, signal-conditioning front end, and a 4-channel differential mux. This TI Precision Design details the process for optimizing the precision, high-voltage, front-end drive circuit using the MUX36D04, OPA192 and OPA140 to achieve excellent dynamic performance and linearity with the ADS8864.

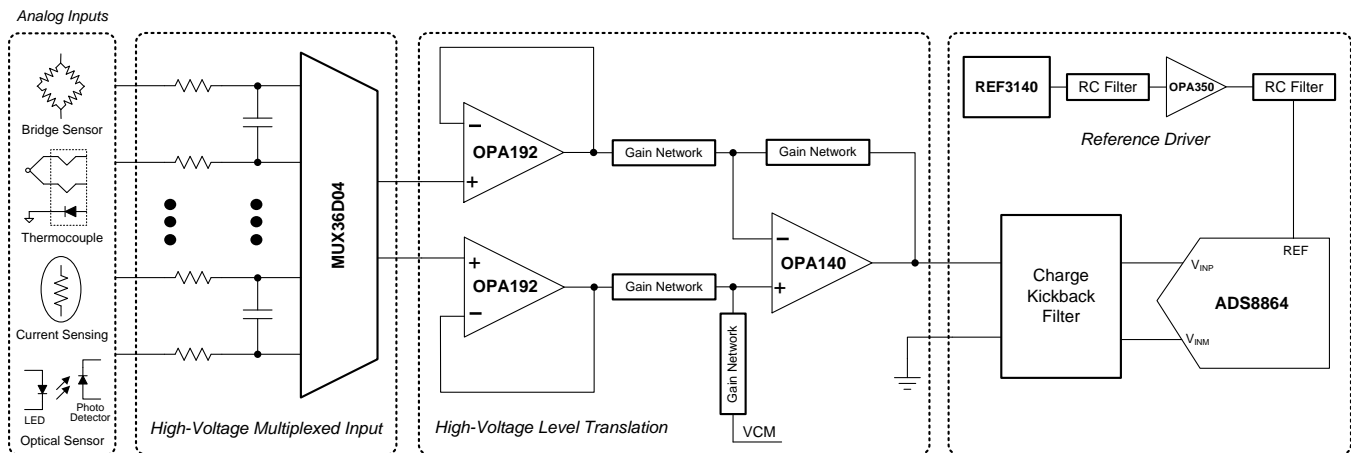

Figure 43. 16-Bit Precision Multiplexed Data-Acquisition System for High-Voltage Inputs With Lowest Distortion

Typical Application (continued)

10.2.1 Design Requirements

The primary objective is to design a ± 20 V, differential, 4-channel, multiplexed, data-acquisition system with lowest distortion using the 16-bit ADS8864 at a throughput of 400 kSPS for a 10-kHz, full-scale, pure, sine-wave input. The design requirements for this block design are:

- System supply voltage: ± 15 V
- ADC supply voltage: 3.3 V
- ADC sampling rate: 400 kSPS
- ADC reference voltage (REFP): 4.096 V
- System input signal: A high-voltage differential input signal with a peak amplitude of 20 V and frequency (f_{IN}) of 10 kHz are applied to each differential input of the mux.

10.2.2 Detailed Design Procedure

The purpose of this precision design is to design an optimal, high-voltage, multiplexed, data-acquisition system for highest system linearity and fast settling. The overall system block diagram is illustrated in [Figure 43](#). The circuit is a multichannel, data-acquisition signal chain consisting of an input low-pass filter, mux, mux output buffer, attenuating SAR ADC driver, and the reference driver. The architecture allows fast sampling of multiple channels using a single ADC, providing a low-cost solution. This design systematically approaches each analog circuit block to achieve a 16-bit settling for a full-scale input stage voltage and linearity for a 10-kHz sinusoidal input signal at each input channel.

For step-by-step design procedure, circuit schematics, bill of materials, PCB files, simulation results, and test results, refer to [TI Precision Design TIPD151, 16-Bit, 400-kSPS, 4-Channel Multiplexed Data-Acquisition System for High-Voltage Inputs with Lowest Distortion](#).

10.2.3 Application Curve

Figure 44. ADC 16-Bit Linearity Error for the Multiplexed Data-Acquisition Block

11 Power Supply Recommendations

The MUX36xxx operates across a wide supply range of ± 5 V to ± 18 V (10 V to 36 V in single-supply mode). They also perform well with unsymmetric supplies such as $V_{DD} = 12$ V and $V_{SS} = -5$ V. For reliable operation, use a supply decoupling capacitor ranging between 0.1 μ F to 10 μ F at both the VDD and VSS pins to ground.

The on-resistance of the MUX36xxx varies with supply voltage, as illustrated in [Figure 45](#)

Figure 45. On-Resistance Variation With Supply and Input Voltage

12 Layout

12.1 Layout Guidelines

Figure 46 illustrates an example of a PCB layout with the MUX36S08IPW, and Figure 47 illustrates an example of a PCB layout with MUX36D04IPW.

Some key considerations are:

1. Decouple the VDD and VSS pins with a 0.1- μ F capacitor, placed as close to the pin as possible. Make sure that the capacitor voltage rating is sufficient for the V_{DD} and V_{SS} supplies.
2. Keep the input lines as short as possible. In case of the differential signal, make sure the A inputs and B inputs are as symmetric as possible.
3. Use a solid ground plane to help distribute heat and reduce electromagnetic interference (EMI) noise pickup.
4. Do not run sensitive analog traces in parallel with digital traces. Avoid crossing digital and analog traces if possible, and only make perpendicular crossings when necessary.

12.2 Layout Example

Figure 46. MUX36S08IPW Layout Example

13.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

4224485/A 08/2018

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.

EXAMPLE BOARD LAYOUT

RRJ0016A

WQFN - 0.8 mm max height

PLASTIC QUAD FLATPACK - NO LEAD

LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE: 20X

SOLDER MASK DETAILS

4224485/A 08/2018

NOTES: (continued)

4. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/slua271).
5. Vias are optional depending on application, refer to device data sheet. If any vias are implemented, refer to their locations shown on this view. It is recommended that vias under paste be filled, plugged or tented.

EXAMPLE STENCIL DESIGN

RRJ0016A

WQFN - 0.8 mm max height

PLASTIC QUAD FLATPACK - NO LEAD

SOLDER PASTE EXAMPLE
BASED ON 0.125 MM THICK STENCIL
SCALE: 20X

EXPOSED PAD 17
80% PRINTED SOLDER COVERAGE BY AREA UNDER PACKAGE

4224485/A 08/2018

NOTES: (continued)

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

4220204/A 02/2017

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.
5. Reference JEDEC registration MO-153.

EXAMPLE BOARD LAYOUT

RUM (S-PQFP-N16)

PLASTIC QUAD FLATPACK

4209092/A 10/2007

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - B. This drawing is subject to change without notice.
 - C. QFN (Quad Flatpack No-Lead) package configuration.
 -  The package thermal pad must be soldered to the board for thermal and mechanical performance. See the Product Data Sheet for details regarding the exposed thermal pad dimensions.
 - E. Package complies to JEDEC MO-220 variation WGGC-3.

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

Bottom View

Exposed Thermal Pad Dimensions

4209093-2/F 09/15

NOTES: All linear dimensions are in millimeters

RUM (S-PWQFN-N16)

PLASTIC QUAD FLATPACK NO-LEAD

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Publication IPC-7351 is recommended for alternate designs.
 - This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, QFN Packages, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <<http://www.ti.com>>.
 - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - Customers should contact their board fabrication site for solder mask tolerances.
