JBX SERIES

Overview

■ Typical Applications	06
■ Features & Benefits	07
■ Range Overview	08
■ Layouts	10
■ General Technical Characteristics	12

Typical Applications

Medical

Robotics - Machine tools

Building Automation & Control

Instrumentation / Measurement

Off road - Mining - Railway

Telecom - Data infrastructure

Features & Benefits

WATER PROOF

IP68 in Mated and Unmated Conditions

Ideal for outdoor applications with temporary or continuous water immersion and dust protection.

SIGNAL INTEGRITY

360° EMI Shielded

Less than 5mΩ: Qualified and Compatible to be used in electromagnetic radiation areas and ensures proper signal integrity and transmission.

SPACE SAVING

High Density Layouts

Ideal for compact devices due to small footprint. The use of 0.5mm contacts along with miniature housing makes it suitable for tight applications.

RELIABLE MATING

Push Pull Locking Mechanism

Only requires two fingers to mate/unmate securely with an audible, tactile and visual indicator, capable of mating over 5,000 times.

COST SAVINGS

Mixed Power & Signal Layouts

Power supply and transmission can be combined in a unique interconnection solution to reduce system complexity and minimize component/installation costs.

JBX IP40

Protective Boot

Choice of Contact termination

- Crimp
- Solder

Plug

FC: Right Angle Plug

FD: Straight Plug

FG: Breakaway Plug

FF: Straight Plug no Latch with Black Boot

FN: Straight Plug with Lanyard

FM: Right Angle Plug with Lanyard

Receptacle

EA: Double Nut Receptacle*

ED: Protuding Front Mount

EP: Rear Mount Receptacle*

ER: Front Mount Receptacle

EZ: Rear Mount Receptacle with Mounting Pins

PC: In Line Cable Receptacle

SA: Rear Mount Cable Receptacle

SR: Front Mount Cable Receptacle

Choice of Contact termination

- Crimp
- Straight PCB Tails
- Solder
- 90° PCB Tails

Protective Boot

* available with 90° PCB tails

Overview

JBX IP68

Protective Boot

Choice of Contact termination

- Crimp
- Solder

Plug

(Available in size 0 and 2)

FH: Straight Plug

Receptacle

(Available in size 0 and 2)

HC: Rear Mount Receptacle*
Available size 0

HD: Protruding Front Mount Receptacle
Available size 0

HH: Front Mount Extended Receptacle
Available size 0 & 2

EC: Double Nut, Front or Rear Mount Receptacle *
Available size 2

Choice of Contact termination

- Crimp
- Solder
- Straight PCB Tails
- 90° PCB Tails

Available for JBX IP40 and JBX IP68

JBX Sealed in Unmated Condition

All dimensions are in mm

General technical characteristics

Materials

- **Outer shell and collet nut:** Brass
- **Latching sleeve:** Brass
- **Shielding ring:** Brass
- **Nut:** Brass
- **Half bushes:** Brass
- **Clip:** Beryllium copper
- **Insert:** PEEK
- **Collet:** PA 6/6 + MoS2
- **Cable seal:** Silicon rubber
- **Contacts:** See every layout pages
- **Halogen free**

Environmental

- **Operating temperature:**
from -40°C to +125°C
- **Flammability rating:**
UL94 V-0
- **Salt spray:**
per MIL-STD-202 method 101
- 48 h (nickel chrome)
- 96 h (black anodized coupling ring)
Higher salt spray resistance (200/500 h)
upon request
- **Sealing:**
- Dynamic IP40 / IP68 in mated condition
- Sealed IP68 connectors in unmated condition
are marked with the symbol "▲".
Please refer to the connector section.
- **Fluid resistance:**
- Gas and oil
- Mineral oil
- Acid bath
- Basic bath
- **Shielding effectiveness:**
55 dB up to 100 MHz

Electrical

- **In accordance with:**
- UL 1977: Certificate ECBT2
File number: E169916
- CSA C22.2: Certificate ECBT8
File number E169916

- Also see pages 10 & 11

Mechanical

- **Durability:**
> 5,000 cycles per IEC 61984 group B
- **Vibration resistance:**
10 - 2,000 Hz, acceleration 15 g,
contact Ø 0.7 mm and 0.9 mm
10 - 2,000 Hz, acceleration 20 g,
contact Ø 1.3 mm - 1.6 mm and 2 mm
Per MIL-STD-1344A method 2005.1
- **Thermal shock:**
5 cycles 30 min. from -40°C to 105°C
Per MIL-STD-202 method 207
- **Mechanical shock:**
50 g, duration 6 ms ; contact Ø 0.7 mm and
0.9 mm
100 g, duration 6 ms ; contact Ø 1.3 mm -
1.6 mm and 2 mm
Per MIL-STD-1344A method 20004.1
- **Discrimination/Keying:**
To eliminate mismatching, JBX connectors
are offered with discrimination keys to avoid
interconnection system errors.
Please consult us for more information.

Contacts

Description
The JBX series is delivered with contacts and offers the unique feature to use the same style contact in any layout with the same active part size (i.e. #25, #22, #20, #18 mm, #16 or #14). This provides our customers with an easy solution to buy only one type of contact to equip all their connectors even if housings/shell sizes are different. This provides the benefit of standardization and subsequent reduced inventory costs. In addition, it eliminates the need for added tooling and simplifies the assembly process. SOURIAU contacts are designed for simple snap-in installation and further eliminate the need for insertion tooling. In addition to the below "crimp" or "solder" style contact options, the JBX series can also be equipped with straight or 90° PCB contacts.
 • Solder  • Crimp  • Straight PCB  • 90° PCB

Packaging for contacts #22 to #14
Due to the wide variety of applications, contact packaging is offered in bulk package.  • 100 pieces loose package

Solder Contacts

JBX Receptacle Assembly Instructions

JBXEA or JBXEC Assembly (Mounting Suggestion)

- Solder or crimp contacts (see pages 231 & 232)
- Slide the lock washer and the hex nut onto the cable
- Apply thread lock to panel nut prior to assembly.
- Place the receptacle in the panel cut-out
- Insert contacts manually in the cavities for removable contacts versions
- Insert the lock washer and tighten the panel nut hand tight
- Screw the hex nut to the bulkhead
- Use two wrenches to finalize the screwing: - Maintain the panel nut wrench fixed
- Screw the hex nut
- Recommended tightening torques are shown in the table below.

Front mounting with fitted contacts

Rear mounting with separate contacts

	Shell size			
	0	1	2	3
Wrench size	11	14	17	21
Tightening torque (Nm)	0.7	1.3	1.7	2
E - Panel max. thicknesses (mm)	6.7	8.3	8	9.5

Note : Assembly operations mentioned above shall not interfere or to be in contradiction with the IPC-WHMA-A-620B

JBXED Assembly (Mounting Suggestion)

- Solder or crimp contacts (see pages 231 & 232)
- Slide the lock washer and the hex nut onto the cable
- Apply thread lock to the receptacle prior to assembly.
- Place the receptacle in the panel cut-out
- Insert contacts manually in the cavities for removable contacts versions
- Insert the lock washer and tighten the panel nut hand tight
- Screw the hex nut to the bulkhead with a wrench
- Recommended tightening torques are shown in the table below.

Shell size	Tightening torque (Nm) max.	Wrench size	E Panel max. thicknesses (mm)
0	0.7	11	3.0
1	1.3	14	4.5
2	1.7	17	6.3

JBXEP Assembly (Mounting Suggestion)

- Solder or crimp contacts (see pages 231 & 232)
- Place the receptacle in the panel cut-out
- Insert the washer and tighten the panel nut hand tight
- Insert contacts manually in the cavities for removable contacts versions
- Use two wrenches to finalize the screwing:
 - Maintain the receptacle with nut wrench fixed
 - Screw the panel nut
- Recommended tightening torques are shown in the table below.

Shell size	Tightening torque (Nm) max.	Wrench size		E Panel max. thicknesses (mm)
		A	B	
0	0.7	10	11	4.5
1	1.3	13	14	6.0
2	1.7	17	17	6.5

Note : Assembly operations mentioned above shall not interfere or to be in contradiction with the IPC-WHMA-A-620B

JBX Receptacle Assembly Instructions (Continued)

JBXER Assembly (Mounting Suggestion)

- Solder or crimp contacts (see pages 231 & 232)
- Slide the lock washer and the hex nut onto the cable
- Place the receptacle in the panel cut-out
- Insert contacts manually in the cavities for removable contacts versions
- Screw the hex nut to the bulkhead with a wrench
- Recommended tightening torques are shown in the table below.

Shell size	Tightening torque (Nm) max.	Wrench size	E Panel max. thicknesses (mm)
00	0.7	7	6.0
0	0.7	11	8.0
1	1.3	14	10.0
2	1.7	17	10.0
3	2	21	12.0

JBXEZ Assembly (Mounting Suggestion)

- Please refer to the customer drawing for the PCB drilling holes.

JBXHC Assembly (Mounting Suggestion)

- Solder or crimp contacts (see pages 231 & 232)
- Place the receptacle in the panel cut-out
- Apply thread lock to panel nut prior to assembly.
- Tighten the panel nut hand tight
- Insert contacts manually in the cavities for removable contacts versions
- Screw the hex nut if needed
- Screw the panel nut with a wrench
- Recommended tightening torques are shown in the table below.

Shell size	Tightening torque (Nm) max.		Wrench size		E Panel max. thicknesses (mm)
	A	B	A	B	
0	1.7	0.7	16	11	4.0

JBXHHD Assembly (Mounting Suggestion)

- Solder or crimp contacts (see pages 231 & 232)
- Slide the lock washer and the hex nut onto the cable
- Place the receptacle in the panel cut-out
- Insert contacts manually in the cavities for removable contacts versions
- Screw the hex nut to the bulkhead with a wrench
- Recommended tightening torques are shown in the table below.

Shell size	Tightening torque (Nm) max.	Wrench size	E Panel max. thicknesses (mm)
0	1.3	11	7.0

JBX Receptacle Assembly Instructions (Continued)

JBXHH Assembly (Mounting Suggestion)

- Solder or crimp contacts (see pages 231 & 232)
- Slide the lock washer and the hex nut onto the cable
- Place the receptacle in the panel cut-out
- Insert contacts manually in the cavities for removable contacts versions
- Screw the hex nut to the bulkhead with a wrench
- Recommended tightening torques are shown in the table below.

Shell size	Tightening torque (Nm) max.	Wrench size	E Panel max. thicknesses (mm)
0	0.7	11	8.0
2	1.7	17	10.0

Note: all dimensions are in mm

Note : Assembly operations mentioned above shall not interfere or to be in contradiction with the IPC-WHMA-A-620B

JBX Plug Assembly Instructions (Continued)

JBXPC Assembly (Mounting Suggestion)

- Slide the Protective boot/Back nut boot or the Back nut standard onto the cable
- Select the proper Collet according to the cable diameter specification (see page 251) and slide it onto the cable
- Strip external cable jacket and wire (see dimension pages 231 & 232)
- Solder or crimp contacts (see pages 231 & 232)
- Place the two half bushes on the insert making sure that the insert keyway appears through the window of the half bushing (fig. 2)
- Place the collet and the half bushes while maintaining the screen. Half bush keys must be seated in the collet keyway (fig. 3)
- If the cable has shielding, fold back the braid so that it is covering the outside diameter of the collet. Braid must be between the collet and half bushes (fig 3A)
- Place all the sub-assembly in the connector housing making sure to keep sub-assembly aligned (fig. 3). Respect the red dot and window alignment
- Install the back nut or the back nut boot and screw it on to the threads
- Use two wrenches to finalize the screwing
- Recommended tightening torques are shown in the table below.

Shell size	Tightening torque (Nm) max.		Wrench size	
	B	C	B	C
0	0.8	0.8	9	8
1	1.0	1.0	11	10
2	1.5	1.5	14	13

JBX Plug Assembly Instructions (Continued)

JBXSA Assembly (Mounting Suggestion)

- Slide the Protective boot/Back nut boot or the Back nut standard onto the cable
- Select the proper Collet according to the cable diameter specification (see page 251) and slide it onto the cable
- Strip external cable jacket and wire (see dimension pages 231 & 232)
- Solder or crimp contacts (see pages 231 & 232)
- Place the two half bushes on the insert making sure that the insert keyway appears through the window of the half bushing (fig. 2)
- Place the collet and the half bushes while maintaining the screen. Half bush keys must be seated in the collet keyway (fig. 3)
- If the cable has shielding, fold back the braid so that it is covering the outside diameter of the collet. Braid must be between the collet and half bushes (fig 3A)
- Place all the sub-assembly in the connector housing making sure to keep sub-assembly aligned (fig. 3).
- Install the back nut or the back nut boot and screw it on to the threads
- Tighten the panel nut hand tight (fig. 4)
- Use two wrenches to finalize the screwing (fig. 5 & 6)
- Recommended tightening torques are shown in the table below.

Shell size	Tightening torque (Nm) max.		Wrench size		E Panel max. thicknesses (mm)
	B	C	B	C	
2	1.7	1.5	17	13	6.5

JBXSR Assembly (Mounting Suggestion)

- Slide the Protective boot/Back nut boot or the Back nut standard onto the cable
- Select the proper Collet according to the cable diameter specification (see page 251) and slide it onto the cable
- Strip external cable jacket and wire (see dimension pages 231 & 232)
- Solder or crimp contacts (see pages 231 & 232)
- Place the two half bushes on the insert making sure that the insert keyway appears through the window of the half bushing (fig. 2)
- Place the collet and the half bushes while maintaining the screen. Half bush keys must be seated in the collet keyway (fig. 3)
- If the cable has shielding, fold back the braid so that it is covering the outside diameter of the collet. Braid must be between the collet and half bushes (fig 3)
- Insert the receptacle in the panel cut out, respect the orientation (fig. 4)
- Place all the sub-assembly in the connector housing making sure to keep sub-assembly aligned (fig. 4). Respect the red dot and window alignment.
- Install the back nut or the back nut boot and screw it on to the threads
- Screw the hex nut with a wrench (fig. 5)
- Use two wrenches to finalize the screwing (fig. 6)
- Recommended tightening torques are shown in the table below.

Shell size	Tightening torque (Nm) max.		Wrench size		E Panel max. thicknesses (mm)
	B	C	B	C	
0	0.7	0.8	11	8	8.0
1	1.3	1.0	14	10	10.0
2	1.7	1.5	17	13	10.0
3	2.0	2.0	21	15	12.0

JBX Plug Assembly Instructions (Continued)

JBXFC & JBXFM Assembly (Mounting Suggestion)

- Slide the Protective boot/Back nut boot or the Back nut standard onto the cable
- Select the proper Collet according to the cable diameter specification (see page 251) and slide it onto the cable (fig. 2)
- Slide the Elbow backshell onto the cable (fig. 2)
- If the cable has shielding, fold back the braid so that it is covering the outside diameter of the collet. Braid must be between the collet and half bushes (fig 2A)
- Strip external cable jacket and wire (see dimension pages 231 & 232)
- Solder or crimp contacts (see pages 231 & 232)
- Place the cabling spacer onto the cables
- Insert the contacts into the insulator.
- Slide the Cabling spacer on the Insulator (fig. 3)
- Slide the Retaining ring on the Insulator (fig. 3)
- Position the wires at 90° then place the assembly (Elbow backshell + Cabling spacer + Insulator) inside the sleeve (fig. 3)
- Ensure that the milled flat of the elbow outlet is facing to the rear of the plug housing (fig. 4)
- Tighten the retaining nut with a wrench (fig. 5)
- Install the back nut or the back nut boot and screw it on to the thread
- Use two wrenches to finalize the screwing (fig. 6)
- Recommended tightening torques are shown in the table below.

Shell size	Tightening torque (Nm) max.			Wrench size		
	A	B	C	A	B	C
0	0.4	-	0.8	10	8	8
1	0.4	-	1.0	12	10	10
2	0.5	-	1.5	15	13	13
3	0.5	-	2.0	17	15	15

Note: all dimensions are in mm

Note : Assembly operations mentioned above shall not interfere or to be in contradiction with the IPC-WHMA-A-620B

JBXFD, JBXFG, JBXFN & JBXFH Assembly (Mounting Suggestion)

- Slide the Protective boot/Back nut boot or the Back nut standard onto the cable
- Select the proper Collet according to the cable diameter specification (see page 251) and slide it onto the cable
- Strip external cable jacket and wire (see dimension pages 231 & 232)
- Solder or crimp contacts (see pages 231 & 232)
- Place the two half bushes on the insert making sure that the insert keyway appears through the window of the half bushing (fig. 2)
- Place the collet and the half bushes while maintaining the screen. Half bush keys must be seated in the collet keyway (fig. 3)
- If the cable has shielding, fold back the braid so that it is covering the outside diameter of the collet. Braid must be between the collet and half bushes (fig 3A)
- Place all the sub-assembly in the connector housing making sure to keep sub-assembly aligned (fig. 3). Respect the red dot and window alignment
- Install the back nut or the back nut boot and screw it
- Use two wrenches to finalize the screwing
- Recommended tightening torques are shown in the table below.

Shell size	Tightening torque (Nm) max.		Wrench size	
	B	C	B	C
00	-	0.7	6	6
0	-	0.8	9	8
1	-	1.0	11	10
2	-	1.5	14	13
3	-	2.0	16	15

JBX Plug Assembly Instructions (Continued)

JBXFF Assembly (Mounting Suggestion)

- Slide the Protective boot/Back nut boot or the Back nut standard onto the cable
- Select the proper Collet according to the cable diameter specification (see page 251) and slide it onto the cable
- Strip external cable jacket and wire (see dimension pages 231 & 232)
- Solder or crimp contacts (see pages 231 & 232)
- Place the two half bushes on the insert making sure that the insert keyway appears through the window of the half bushing (fig. 2)
- Place the collet and the half bushes while maintaining the screen. Half bush keys must be seated in the collet keyway (fig. 3)
- If the cable has shielding, fold back the braid so that it is covering the outside diameter of the collet. Braid must be between the collet and half bushes (fig 3A)
- Place all the sub-assembly in the connector housing making sure to keep sub-assembly aligned (fig. 3). Respect the red dot and window alignment
- Install the back nut or the back nut boot and screw it
- Use two wrenches to finalize the screwing
- Recommended tightening torques are shown in the table below.

Shell size	Shell wrench		Back nut wrench	
	Size	Torque (Nm)	Size	Torque (Nm)
1	10	-	10	1.0

Collets Selection According to Cable Diameters

Collet number	Cable diameter (mm)				
	Shell size 00	Shell size 0	Shell size 1	Shell size 2	Shell size 3
1	1.1 to 1.9	1.5 to 2.5	2.0 to 2.5	3.5 to 4.7	4.9 to 6.0
2	2.0 to 2.8	2.6 to 3.5	2.6 to 3.5	4.8 to 5.7	6.1 to 7.2
3	2.9 to 3.5	3.6 to 4.5	3.6 to 4.5	5.8 to 6.7	7.3 to 8.4
4	-	4.6 to 5.5	4.6 to 5.5	6.8 to 7.7	8.5 to 9.6
5	-	-	5.6 to 6.6	7.8 to 8.7	9.7 to 10.8
6	-	-	6.7 to 7.5	8.8 to 9.7	10.9 to 12.0

Note: all dimensions are in mm

Rated Current & Working Voltage

Current Carrying Capacity

The current carrying capacity of a connector is limited by the thermal properties of materials used in its construction. The amount of current that can be handled depends on the size of cable used, the ambient temperature and the heat that is generated inside the connector. Part 3 of the IEC 60512 standard determines through a derating curve, the maximum current permissible, which varies from one layout to another (Fig.1 & Fig.2). Wire size plays an important role in dissipating heat and avoid overheating (Fig.1 & Fig.3).

Please note that the curve should be adjusted when dealing with potential hot spots, which can occur as a result of unequal loading of current across a number of contacts. As a general rule, it is best to avoid placing power handling contacts in the middle of the connector; try to locate them towards the edge where heat can be dissipated more effectively. Eventually you should find a level which represents the permissible operating range:

Fig.1: JBX2-001 (Power Derating curve - Signal Contact Fixed at 2A)

Connector rating:

- Power Contact : 26A at 30°C T-Rise
- Signal Contact : 2A

Signal Contact (cable awg 26) is powered at 2A
Power Contact (cable awg 16): 0 to 35 A

8 contacts

2A 700V
6 x Ø 1.3
2 x Ø 2.0

Fig.2: JBX2-001 (Power Derating curve - Signal Contact Fixed at 2A)

Connector rating:

- Power Contact: 17A at 30°C T-Rise
- Signal Contact: 2A

Signal Contact (cable awg 26) is powered at 2A,
Power Contact (cable awg 20): 0 to 25 A

9 contacts

2A 700V
6 x Ø 0.7
3 x Ø 1.3

Fig.3: JBX2-001 (Power Derating curve - Signal Contact Fixed at 2A)

Connector rating:

- Power Contact: 26A at 30°C T-Rise
- Signal Contact: 2A

Signal Contact (cable awg 26) is powered at 2A,
Power Contact (cable awg 18): 0 to 40 A

10 contacts

2A 700V
8 x Ø 0.7
2 x Ø 1.6

The **rated current** is defined as uninterrupted continuous current that a connector can take when all contacts are energized simultaneously without exceeding the maximum limit of temperature. The earth contact is never loaded.

Shielding Effectiveness/Corrosion

Shielding Effectiveness

EMC (Electro-Magnetic Compatibility) means a device (e.g. a connector) can tolerate interferences and continue to work properly.

It's generally measured via the shielding effectiveness.

This value is a ratio between the power radiated inside to the maximum power interferences outside.

$$(dB)=10\text{Log} \frac{P_{in}}{P_{out}}$$

Pin: Power in
Pout: Power out

Corrosion Resistance

Control of corrosion impact on electronic devices is an important expertise. Metal connectors suitable for outdoor and indoor use should be able to withstand climate ingress, exposure to salt spray and corrosive gases while still maintaining mechanical and electrical functionality.

Over the years, many different test methods have been developed but never really captured the exact equivalence between testing scenarios and real electronic device exposure to corrosive environments. SOURIAU has been developing, manufacturing and testing connector solutions for more than 90 years and has developed a unique corrosion test based on Salt Spray exposure combined with four additional corrosive gases. Typical industrial applications may involve exposure to corrosive atmospheres equivalent to 48 or 96 hours. SOURIAU's JBX product series has been validated to withstand corrosive agent exposure at these timeframes. In addition, we can offer different solutions and plating options to withstand longer corrosion exposure times and test up to 500 hours.

UL94 + UL1977

Underwriter Laboratories

There are two main standards for industrial connectors: UL94 & UL1977

UL94

This standard is dedicated to plastics flammability. It characterizes how the material burns in various orientation and thicknesses.

The JBX series has been rated at **V-0** & **HB**.

Procedure: A specimen is supported in a vertical or horizontal position and a flame is applied to the bottom of the specimen. The flame is applied for ten seconds and then removed until flaming stops, at which time the flame is reapplied for another ten seconds and then removed. Two sets of five specimens are tested.

V-0 Vertical burning:

- Specimens must not burn with flaming combustion for more than 10 seconds after each test flame application
- Total flaming combustion time must not exceed 50 seconds for each set of 5 specimens
- Specimens must not burn with flaming or glowing combustion up to the specimen holding clamp
- Specimens must not drip flaming particles that ignite the cotton
- No specimen can have glowing combustion remain for longer than 30 seconds after removal of the test flame.

HB Horizontal burning:

- A material classified HB shall not have a burning rate exceeding 40 mm per minute over a 75 mm span for specimens having a thickness of 3.0 to 13 mm
- A material classified HB shall not have a burning rate exceeding 75 mm per minute over a 75 mm span for specimens having a thickness less than 3.0 mm
- A material classified HB shall cease to burn before the 100 mm reference mark.

UL1977

There are several standards which deal with plug and receptacle. Each of them is only for a small area of applications. It could be telecommunication, etc. The UL 1977 covers single and multipole connectors intended for factory assembly.

Requirements apply to devices taking into account intensity and voltage. The categories are as follows:

	0	30 V (42 V peak)	600 V
0	Type 0		Type 1A
8.3 A			Type 2
31 A	Type 1B	Type 3	
200 A		Type 4	
1000 A			

According to above table, the level of performance that has to be reached could be different. Most of them are explained in the following page.

Insulating materials:

Material uses for electrical insulation, as a minimum, have to comply with the characteristics shown below:

- Minimum ratings for polymeric materials

Type	Flame rating	Relative thermal index (RTI) Electrical/mechanical w/o impact **
0	-	50/50
1A	HB	50/50
1B	HB	50/50
2	HB	50/50
3	HB	50/50
4	HB	50/50

* The RTI of the material shall not be lower than the temperature measured during the Temperature Test.

** For a thickness less than that for which a value has been established, the RTI of the minimum thickness with an established value shall be used.

Assembly:

Connector has to be keyed to prevent any mismatching that can damage the machine or hurt the user. In the same way, plugs and sockets have to be equipped to protect persons against contact with live parts.

Finally the identified grounding contact shall be located so that the corresponding electrical continuity has to be completed before any other contact.

UL94 + UL1977 (Continued)

Underwriter Laboratories  US

UL1977

Spacing:

For a 250V max connector, distance through air or over material shall be 1.2mm whereas from 250V to 600V connector the spacing is 3.2mm minimum. These distances have to be taken between uninsulated live parts as shown in the matrix below:

• Applicability of spacing requirements

Type	Uninsulated live part - uninsulated live part of opposite polarity	Uninsulated live part - uninsulated grounded metal part	Uninsulated live part - exposed dead metal part
0	No	No	No
1A	Yes	Yes	Yes
1B	Yes	Yes	No
2	Yes	Yes	Yes
3	Yes	Yes	Yes
4	Yes	Yes	Yes

An alternative way to determine voltage rating is with the Dielectric-Withstand test. If during one minute there is no arc-over or breakdown the rated voltage is given as shown below:

- a) 500 volts for a type 1B device
- b) 1000 volts plus twice rated voltage for types 1A, 2, 3 and 4 devices.

Marking:

A device shall be legibly marked with the manufacturer's trade name, trade mark, or other descriptive marking by which the organization responsible for the product may be identified. (Exception: If the device is too small, or where the legibility would be difficult to attain, the manufacturer's name, trademark, or other descriptive marking may appear on the smallest unit container or carton)

The following shall be marked on the device or on the smallest unit container or carton or on a stuffer sheet in the smallest unit container or carton:

- a) The catalog number or an equivalent designation
- b) The electrical rating in both volts and amperes, if assigned
- c) Whether ac or dc, if restricted
- d) Flammability class, if identified

Example - Marking for the arrangement 10-3:

10A 500V UL94 V-0

What is NEMA Rating ?

- NEMA ratings vs IP ratings

Whereas IP ratings only consider protection against ingress of foreign bodies (first digit) and ingress of water (second digit), NEMA ratings consider these but also verify protection from external ice, corrosive materials, oil immersion, etc.

The correlation between NEMA & IP being limited only to dust and water, we can state that a NEMA type is equivalent to an IP rating but it is not possible to say the contrary.

Below a list of some NEMA standards:

Enclosure rating	IP20	IP22	IP55	IP64	IP65	IP66	IP67
Type 1	•						
Type 3				•			
Type 3R		•					
Type 3S				•			
Type 4						•	
Type 4X						•	
Type 6							•
Type 12			•				
Type 13					•		

• indicates compliance

Type 6 rating can be either Type 6 or Type 6P - please see below:

6	IP67	Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment, falling dirt, hose-directed water, the entry of water during occasional temporary submersion at a limited depth and damage from external ice formation.
6P	IP67	Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against incidental contact with the enclosed equipment, falling dirt, hose-directed water, the entry of water during prolonged submersion at a limited depth and damage from external ice formation.

Ethernet for the Layman

In order to explain basic Ethernet theory, we can use a functional comparison to a busy city with highways, buildings and cars. To illustrate this, the table below provides correlation between the different components/pieces/links that encompass Ethernet network connectivity, and the larger scale infrastructure of a metropolitan city.

- **City:** The network itself
- **Buildings:** End equipment, PC, server, etc.
- **Roads:** Ethernet cabling
- **Cars:** Data packets, datagrams, bits, bytes, etc.
- **Tolls:** Firewalls
- **Bridges:** Connectors
- **Traffic laws:** Protocol/communication specifications

Ethernet Basics

Ethernet is a widely used communications protocol that is used to transmit data packets (datagrams) between network devices. Imagine a highway in a large metropolitan area six lanes wide at rush hour. The vehicles on the highway need rules to follow so that they get to their destination without crashing into each other. In an Ethernet network link, there could be 100 million bits of information transmitted in one second. In the Ethernet standard, there exist rules to govern packet structure, transmission requirements, error correction, communication with end equipment, etc.

Examining the differences between 100Mhz, 100 Base TX, Cat5e/Cat6. What does it all mean?

When discussing connectors and Ethernet, there are a few key details to be aware of:

- 100Mhz is a measurement of Frequency for the signal
 - Comparable to the Speed Limit of a highway
- 100BaseTX (or Fast Ethernet) is an Ethernet link standard and identifies available link bandwidth. The bandwidth is measured in units of Mbits/S (megabits per second)
 - Comparable to the number of cars that pass a point in one second
- Cat5e/Cat6 are an EIA/TIA standard for performance and physical characteristics for cables and connectors
 - Comparable to performance specifications of the car and highway.

In connectors and cables, Fast Ethernet uses 2 pairs. One for transmit and one for receive. This way data traffic can flow in both directions simultaneously.

Souriau offering:

Standard solutions.

Conclusion

To carry 100Mb/s data signal, 100BaseTX or Fast Ethernet recommends the use of Cat5e connectors as well as Cat5e cable with the support of a 100MHz signal. Nevertheless, a 100Mb/s signal can be transmitted in certain conditions (short distance, only one connector, lower frequency but a different code) thru many other connection materials - not necessarily Cat5e rated.

JBX SERIES

Appendices

Glossary of Terms

• Clearance

Per the IEC 60664-1 it is the shortest distance between two conductive parts even over the air.

• Creepage distance

Per the IEC 60664-1 it represents the shortest distance along the surface of the insulating material between two conductive parts.

• Working voltage

Per the IEC 60664-1 it is the highest r.m.s. value of A.C. or D.C. voltage across any particular insulation which can occur when the equipment is supplied at rated voltage.

• Rated impulse voltage

Impulse withstands voltage value assigned by the manufacturer to the equipment or to a part of it characterizing the specified withstand capability of its insulation against transient overvoltage.

• Working current

It is the maximum continuous and not interrupted current able to be carried by all contacts without exceeding the maximum temperature of the insulating material.

• Transient voltage

Extract from the IEC 60664-1: Short duration overvoltage of a few millisecond or less, oscillatory or non-oscillatory, usually highly damped.

• CTI (Comparative Tracking Index)

The CTI value is commonly used to characterize the electrical breakdown properties of an insulating material. It allows users to know the tendency to create creepage paths. This value represents the maximum voltage after 50 drops of ammonium chloride solution without any breakdown.

• RTI (Relative temperature Index):

Extract from ULs website:

Maximum service temperature for a material, where a class of critical property will not be unacceptably compromised through chemical thermal degradation, over the reasonable life of an electrical product, relative to a reference material having a confirmed, acceptable corresponding performance defined RTI.

- **RTI Elec:** Electrical RTI, associated with critical electrical insulating properties.
- **RTI Mech Imp:** Mechanical Impact RTI, associated with critical impact resistance, resilience and flexibility properties.
- **RTI Mech Str:** Mechanical Strength (Mechanical without Impact) RTI, associated with critical mechanical strength where impact resistance, resilience and flexibility are not essential.
