OVER VOLTAGE PROTECTION DEVICE

Company Information

Company Profile

SFI is a professional manufacturer in full range over voltage products in mono-chip, multilayer chip and advanced varistor.

We have the largest production capability and production line of the over voltage protection components to supply customer the circuit protection in the world market.

Material

Body material : Ceramic

Termination : All size from 0201 to 3220 size are all Nickel Barrier (Ag/Ni/Sn)

Our products meet RoHS compliant.

Advanced Techniques Applied

In order to meet the market trend and fast market change, we build our R&D team to control reliability and stability of the products. We have been utilizing the advanced material and manufacturing techniques on producing the electronic elements and parts. In Taiwan, we are the first company to launch the Zinc Oxide based Ceramic Semiconductor devices with full range and with the highly advanced multilayer formation technologies to apply the high density circuit assemblies. We obtained many kinds of patents for excellent product designs.

SFI's Varistors with high reliability can protect the electronics systems from over voltages by limited surge voltages and absorbing energy. They are used to safeguard the components to ensure more electromagnetic compatibility and to suppress transients caused by electrostatic discharge. In other words, they have the added advantage of greater surge current and energy handling capabilities as well as EMI / RFI attenuation.

SFI's Varistors have established themselves as a secure and low-cost means of protection in general-purpose use.

Over Voltage Pulse Introduction

Environment

Energy vs Time

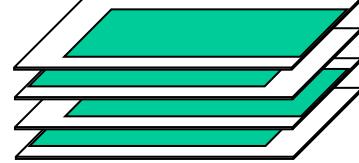

OVER VOLTAGE PROTECTION DEVICE

Inner Structure & Certification

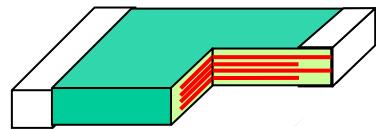

Structure

Multilayer Surface Mount Varistors are made from semi-conducting ceramics by highly advanced multilayer formation technologies, which could offer strong protection, excellent transient energy absorption and internal heat dissipation. The devices are chip form without leads. Eliminating lead inductance and guaranteeing a faster speed response time of less than 0.5ns, which make them fast enough to ensure reliable protection against ESD pulse and other specific transient events. These transient suppression devices are significantly smaller footprints and lower profiles than traditional zener diodes or radial MOVs.

OVER VOLTAGE PROTECTION DEVICE

Operation Theory & Function Diagram

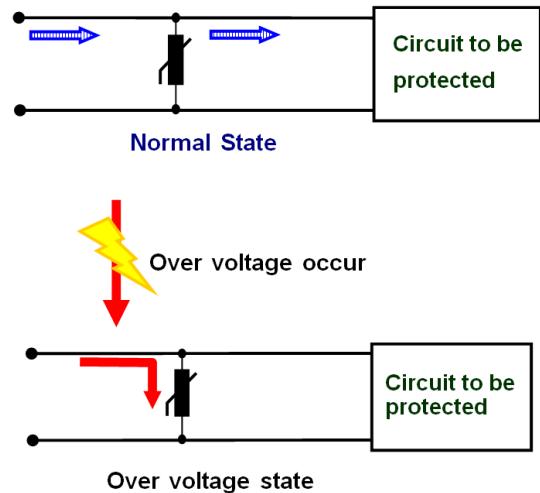

Voltage Dependent Characteristic

Transient voltage suppressors (Varistors) are voltage-dependent electrical resistors with symmetrical V/I characteristic and breakdown region. Their resistance value decreases with increasing voltage, and thus "short-circuiting" further rises in over voltage.

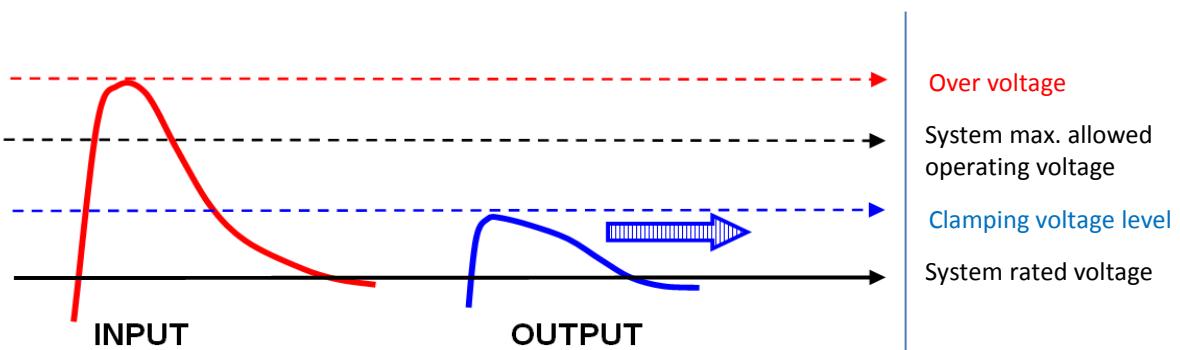

The Prevention of Over Voltage

In other words, as long as the voltage increases above the threshold of the Transient voltage suppressors , the suppressor will draw a rapidly increasing current; then the over voltage is considerably attenuated away from the protected circuit, that is why the inherent protection of equipment should be supplemented by including specific components which will raise the withstand capabilities to required level.
Varistors provide protection against all kinds of over voltage and prevent electronic equipment from being damaged by transient events.

The Function Diagram

OVER VOLTAGE PROTECTION DEVICE

CSPD Introduction

Special Introduction CSPD

CSPD (Chip Surge Protection Device) is a kind of surface mount surge voltage protector. SFI utilized exclusive powder material and product technology to develop a creative new concept . We also get many innovative patents from many countries. This series has the better non-linear Ω with higher withstanding peak current compared to conventions.

Description :

The non-linear impedance of ceramic comes from Schottky barrier between two pieces of ZnO particles (double Schottky barrier). It means, in sintering process of ZnO , it also realizes the semi-conductive of ZnO particle and makes the grain boundary more tight. (Fig. (1) & (2))
CSPD peak current protection mode as below.

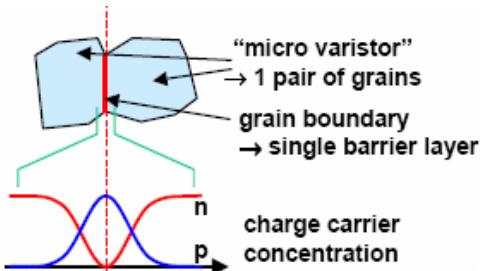

Fig. (1)

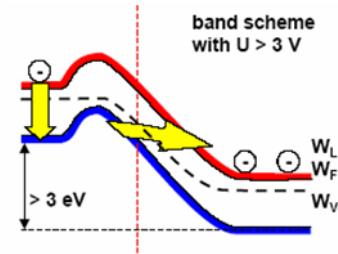

Fig. (2)

Conventional process vs CSPD process

Convention	CSPD
(1) Mixture of ZnO	
At same sintering process, 1.The ZnO particle becomes ion mixture and increase semi-conductive. 2.Forming the boundary of covering ZnO particles.	The ZnO mixture and covering and the high impedance materials of particle are divided to two individual process (innovation) and ZnO particle mixture to make more semi-conductive.
(2) Distribution of boundary	
If the particle of ZnO is too rough and few, it's difficult to cover on surface evenly. The result will make the high resistance of Bi ₂ O ₃ not evenly and affect dispersion higher, alpha value lower, clamping voltage higher and affect functions of varistor.	The product is made by nanotech process and makes the boundary grains in nano to make a chemical compound. It makes the boundary cover the ZnO evenly and makes each double Schottky barrier more higher and even the same height, the function more concentrative, dispersion lower, higher alpha and low clamping voltage. The functions of varistor is upgraded.

OVER VOLTAGE PROTECTION DEVICE

CSPD Series Advantage

Special Character

- ★ **Micro Package Size (SMD) type :** to achieve large space and solve height Limit
- ★ **High Surge Current :** Withstand 10/700μs 6KV Surge
- ★ **Low BDV :** 12V can provide the best solution for protective systems
- ★ **High reliability :** Low leakage after high reliability
- ★ **Low Clamping**
- ★ **Electric Distribution Concentricity**
- ★ **High Non-linear α Value :** Over 25 and it will upgrade IV curve sensitivity
- ★ **Quick response time :** Solve the problem "extinguish" of GDT
- ★ **High performance :** Surge sparks over 10 times on waveform 10/700μs
- ★ **Good Temperature Features :** Operating range -55 °C~125 °C

OVER VOLTAGE PROTECTION DEVICE

Super High Current Type (SHC)

Description

Most applications in communications base voltage of 48Vdc voltage, lightning likely path through a coaxial cable or antenna to damage to the internal IC, will have a lot of power surges and voltage spikes on it. For a combination of lightning within base station power system, lightning protection circuit is relatively simple, but also more mature, usually in combination with through the DC side of the power flow to 15KA(8/20μs waveform) ways to DC SPD.

Features

- ※ Size : 0805~6420 (Inch)
- ※ Meet : IEC61000-4-5
1.2/50μs and 8/20μs combined wave
- ※ Respond : < 0.5 ns
- ※ BDV : 24V~82V
- ※ Peak surge current : 200A~20KA
- ※ Low leakage : <1μA
- ※ Operating temperature : 125°C
- ※ Bi-directional
- ※ SMD package

Features

- ◆ Size : 0805~2220
- ◆ Meet IEC61000-4-5
Pass 10/700 μ s 40Ω surge 4~8KV test
- ◆ Lower clamping voltage than GDT
- ◆ Faster response time <0.5ns than GDT & Sidactor
- ◆ No extinguish problem
- ◆ Bi-directional
- ◆ Wide operation temperature : - 55 ~ +125°C
- ◆ Ultra Low leakage current : < 1 μ A

Comparison with other Solution

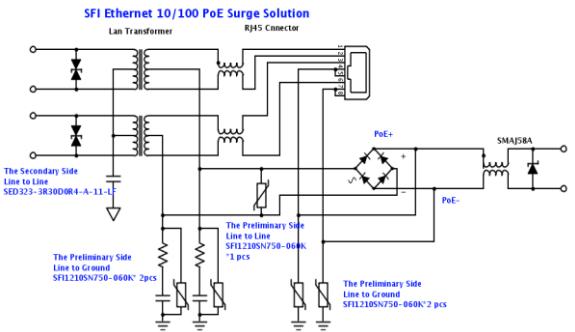

When the network port using GDT in telecom application after the end of current, the protected system operating voltage to maintain the existence of the arc discharge channel, a condition called extinguish. Extinguish exist will damage the protection systems. To resolve this issue, mostly in the GDT use sidactor or MLV with its relatively fast response speed will be continuing to help GDT discharge current is cut off, "turn off" to identify the problem.

Equal

$$\text{GDT} + \text{TVS} = \text{SHN}$$

Notes :

- *1 The breakdown voltage was measured at 1 mA current.
- *2 The Clamping voltage was measured at 8/20 μs standard current, 0805~1206(1A),1210(2.5A),1812(5A) ,2220(10A)
- *3 The surge current was tested at 10/700μs waveform, R_i=40 Ω.
- Common-mode testing is to test all data lines while the GND.
- *4 The capacitance value only for customer reference, it's not formal specification.
- *5 The components shall be employed within 1 year, in the nitrogen condition.
- *6 SFI1210SN750-040K & SFI1210SN750-060K with UL Certification

Description

Circuit

Features

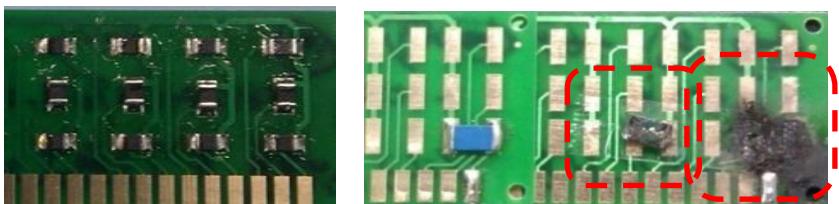

- ※ Size : 0603~3220(inch)
- ※ Meet : IEC61000-4-5
1.2/50 μs or 8/20 μs
- ※ BDV : 170V~680V
- ※ Peak surge : 800A(max.)
- ※ Low leakage : <1μA
- ※ Operating temperature : 125°C.
- ※ UL 1449 approval
- ※ Bi-directional clamping
- ※ **SMD package, non-combustible**

Comparison

The current overvoltage surge protection parts are using plastic epoxy, after thermal shock, products will be degraded and burned. SHV series won't have situation such this.

★High humidity and high temperature (Reliable)

After IEC environment test condition at 85°C and high humidity 40°C 95% load test, the variation of BDV is under 10%

OVER VOLTAGE PROTECTION DEVICE

Super High Automotive Type (SHA)

Description

Circuit for Auto Power

Features

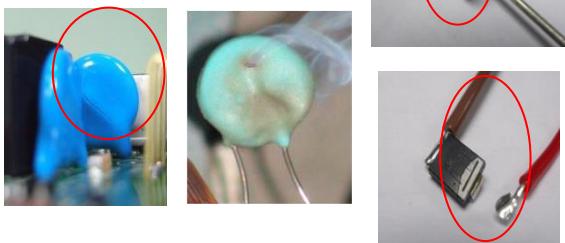

SHA series special for worst environment design, for customer to choice operating temperature, it also meet **AEC-Q200** requirement

This type have several advantages, technology for multilayer to provide large **surface area** and **small size**, for mostly application **replace bigger** surface TVS diode. Besides, this series have more wide operating than zener diode. SHA automotive zener diode using **Nano glass technology coating** · no need plastic cover and also **smallest**

Application Area

All ECU
LED Car Lighting
Multi-Media System
GPS Navigator

Comparison

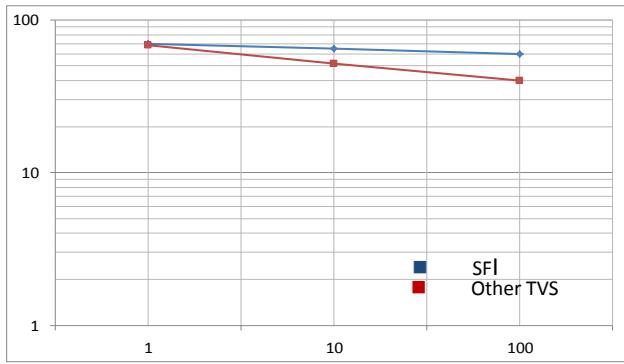

General (Load Dump) solution :

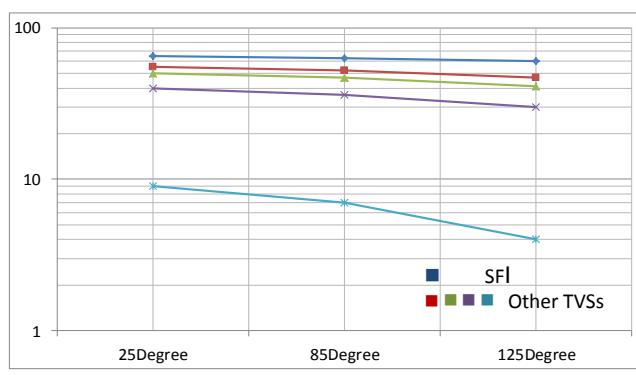

- 1).Using MOV (Disk Varistor), after thermal shock -40 ~ 90°C /72hr, the surface will be broken. This is caused by Epoxy not withstand high temperature and will burn after continuous using.
- 2).Test TVS axial type, the part is broken.
- 3).Test TVS SMD type, it will be peeled off at terminals.

Comparison Load Dump Strike

SHA surge strike advantages

SHA temperature withstand ability

Acc. ISO7637-2 Load Dump : 87V, 0.5 Ω. 400ms)

OVER VOLTAGE PROTECTION DEVICE

SEA (Super ESD Automotive CAN Bus)

Description

CAN Bus is automotive ESD requirement. It is one of the widely used international bus and it's smart electrical control equipment to transfer data between every electronic devices in automobile. It achieves a regional network control systems in whole vehicle and exchanges information between ECU electronic controls to become the automotive electronic control network. This series is designed for this request.

Features

- ◆ Compliant with IEC61000-4-2 contact +/-30 KV
- ◆ Quick response time : <0.5 ns
- ◆ Low reverse leakage current : <1.5 μ A
- ◆ Operating temperature exceeds : 125 °C
- ◆ Bi-directional
- ◆ SMD package
- ◆ Products with Lead-Free
- ◆ Different capacitance values correspond to the different speed signal bus (CAN Bus)
- ◆ Compatible with (ISO7637-2 : 2004(E)
- ◆ Pulse 1 (max. -50 V)/ Pulse 2 (max. 125 V)
- ◆ Pulses 3A and 3B

Application Area

- ★ Can bus system A B C
- ★ Other special requirements

SEA Specification

All specification is base on datasheets and subject to change without notice.

	Part No.	Stand-off Voltage	Breakdown Voltage	Clamping Voltage	Typical Capacitance	Leakage Current	ESD Ability
		V _{DC} (max.)	V _B (1mA)	V _c (max.)	C(1MHz)	I _{LDC}	V _{ESD}
0603	SFI0603EA240-LSP	16V	28.0~38.0V	57V	50pF($\pm 30\%$)	<1.5 μ A	25KV
	SFI0603EA240-MSP	16V	28.0~38.0V	57V	25pF($\pm 30\%$)	<1.5 μ A	25KV
	SFI0603EA240-HSP	16V	28.0~38.0V	57V	10pF($\pm 30\%$)	<1.5 μ A	25KV
	SFI0603EA410-LSP	30V	40.0~48.0V	67V	70pF($\pm 30\%$)	<1.5 μ A	25KV
	SFI0603EA470-LSP	28V	48.0~72.0V	108V	50pF($\pm 30\%$)	<1.5 μ A	25KV
	SFI0603EA470-HSP	28V	48.0~72.0V	108V	15pF($\pm 30\%$)	<1.5 μ A	25KV
0805	SFI0805EA240-LSP	16V	28.0~38.0V	57V	50pF($\pm 30\%$)	<1.5 μ A	25KV
	SFI0805EA470-XSP	36V	42.3~51.7V	77V	200pF($\pm 30\%$)	<2.0 μ A	25KV

Notes :

* 1 The breakdown voltage was measured at 1 mA current.

* 2 The clamping voltage was measured at standard current, 0603(1A).

* 3 The leakage current was tested at working voltage.

* 4 The components shall be employed within 1 year, in nitrogen condition.

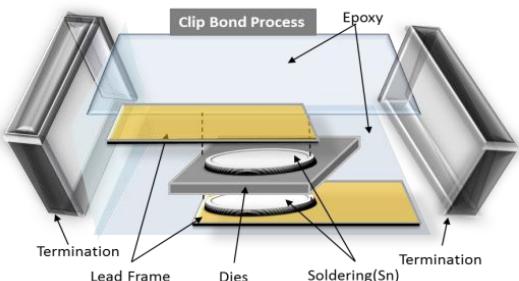

OVER VOLTAGE PROTECTION DEVICE

SGD Package Introduction

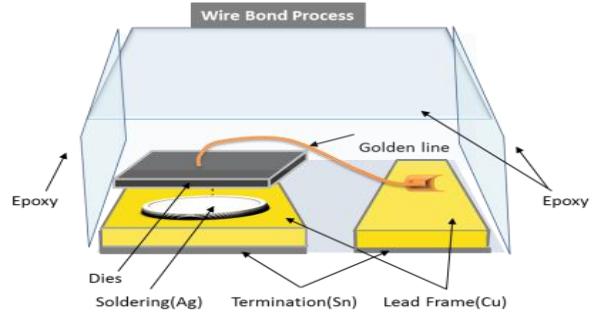

Description for SGD Package

NEW Technology

General Technology

Features

- ◆ Special design for ESD protection solution
- ◆ Pin to Pin compatible DFN package
- ◆ Easy debug & soldering
- ◆ High ESD & Surge robustness
- ◆ High QC sampling & Reliable
- ◆ Cost Saving

Application Area

- ★ ESD protection
- ★ Smart Phone
- ★ Consumer Device

Comparison

Product exterior and structure

Item	Exterior Diagram	X-ray photo	
		Top View	Flank View
NEW TVS (SGD Clip)			
OLD TVS (DFN Wire)			

	SGD (New TVS)	DFN (Old TVS)
Package	Clipped	Wire Bond
Contact Wafer	Surface	Point
ESD Robustness	25KV	15KV
Soldering ability	Good (5 Sides)	Poor(Button Side)
QC sampling	10,000pcs/ per set	77 pcs/ per set

OVER VOLTAGE PROTECTION DEVICE

STS Series (Semiconductor TVS Diode)

Advantage

New TVS(SGD)	Old TVS(DFN)
Soldering Pad : 5 Sides (Same as MLCC)	Soldering Pad : Button Side

STS Specification

OVER VOLTAGE PROTECTION DEVICE

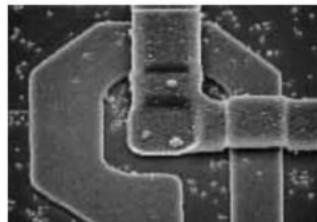

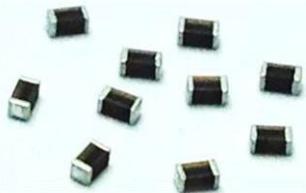

STS Advantage

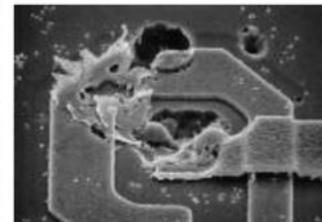

STS Advantage

Background : With the progress of integrated circuits to the nanometer (nm) process, more and more speed, more functional design in one integrated circuit. Such miniaturization design, so as to increase the doping concentration also led thinner gate oxide layer, PN junction width reduction. Resulting IC can easily be damaged by static shock. At this time of protection elements, preferably inhibit low voltage, dynamic resistance is much lower than the protected IC, and has a very fast response time.

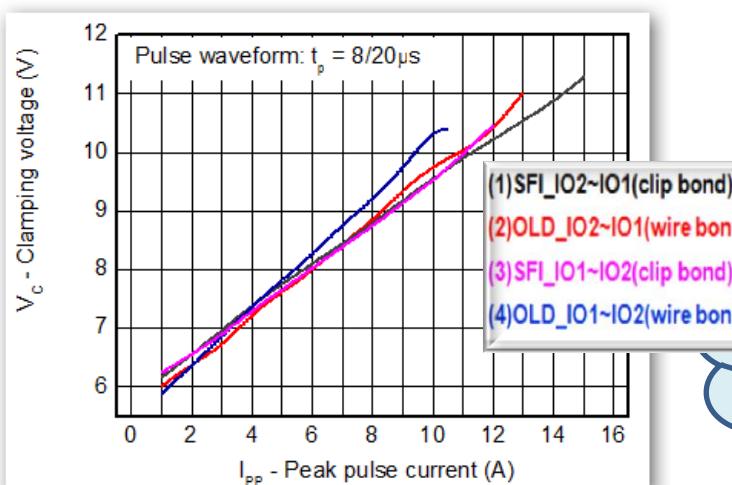

SFI develops this product use Si wafer to develop TVS chip for smallest size 0201 vs 0402 TVS protect devices.

Normal Integrated Circuit

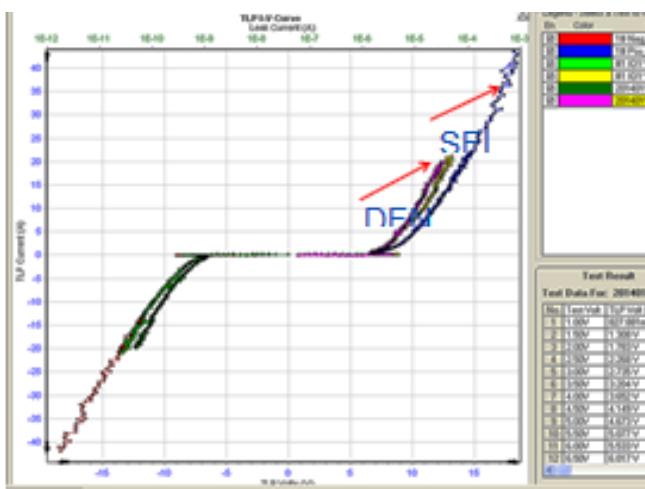

After ESD Strike Integrated Circuit

Surge good

The surge ability of SFI product is better than DFN product about 2A.
IO1~I02...positive

TLP ability

The TLP ability of SFI product is better than DFN product.
TLP(DFN) ability about 20A
TLP(SFI) ability about 40A

OVER VOLTAGE PROTECTION DEVICE

General Single Type (MLE Series)

Description

Electro Static discharge (ESD) is the transients as short duration excursion. Our ESD products are based on the design of multilayer fabrication technology to suppress ESD events. Our products meet IEC61000-4-2 standard for Electromagnetic Compliance testing. We supply extra low capacitance and protect integrated circuits.

Features

■ Fast Response <0.5ns	■ Low Working Voltage	■ Low Capacitance 0.05pF
■ Low Leakage Current < 1 μA	■ Low Clamping Voltage	■ Bi-directional

Specification

1. This Clamping Voltage at which the device stabilized during the transition from high to low impedance 8/20μs waveform current 1A.

2. All capacitance tests are under 1MHz, and the Leakage current is measured at working voltage

OVER VOLTAGE PROTECTION DEVICE

ULC Series (Ultra Low Capacitance)

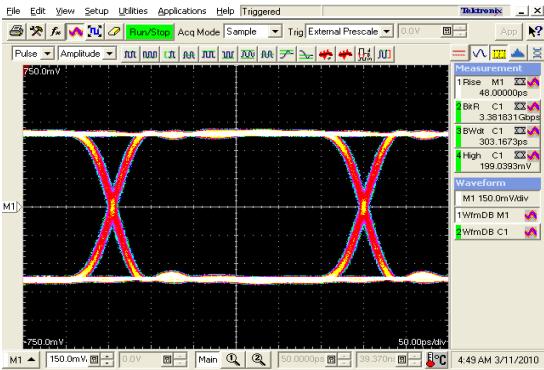

Feature

- ◆ Protection against high ESD voltages
- ◆ Compact size for EIA 0402 and 0603
- ◆ Quick response time (<0.5ns)
- ◆ Low capacitance (<0.05pF)
- ◆ Low leakage current
- ◆ Bi-directional
- ◆ RoHS compliance

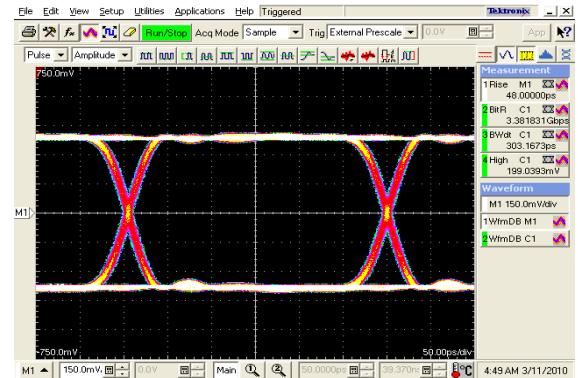

Application Area

- ★ USB2.0 / USB3.0 /HDMI /DVI
- ★ Motherboard,
- ★ Notebook
- ★ Smart Phone
- ★ STB
- ★ DSC, DV, Scanner

Character

The Eye diagram of calibration for HDMI pattern (0.2pF at 3.4GHz)

OVER VOLTAGE PROTECTION DEVICE

Application for IP-CAM

Description

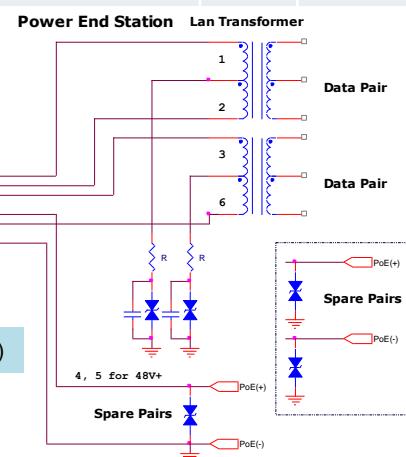

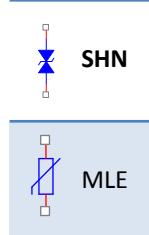

Security control systems incorporate outdoor and indoor units. The outdoor equipment must incorporate protective components to prevent damage to the circuit and equipment by the lightning protection. It's essential to install suitable overvoltage protection components. Here have some recommend part for the IP camera ESD and Surge solution.

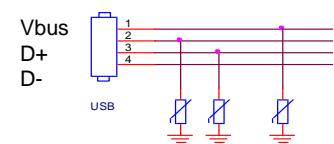

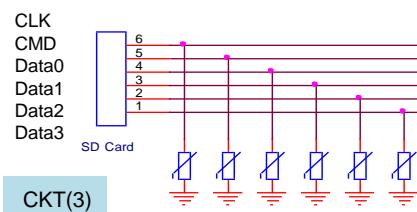

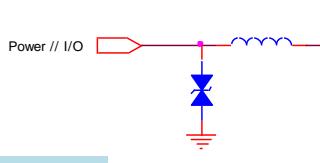

Application Table

All specification is base on datasheets and subject to change without notice.

IP CAM interface for ESD & Surge Solution

The power surge protection solution depends if the ground is connected to earth.

CKT(4)

OVER VOLTAGE PROTECTION DEVICE

Application for Ethernet with PoE

Description

Power over Ethernet (PoE) is a technology which transfer power and data through Ethernet cables. They are including telecom systems, IP phone, wireless station, IP camera, hub, computers which get power by PoE. Therefore, it must be use surge protection for Ethernet RJ45 connectors. In telecom systems are connected by Ethernet and will also have the surge or voltage problem caused by power off by the surge. The surge protective device and pass the overvoltage to earth and clamp the voltage to avoid the system damage and broken. Now the standard of 100/1000M of Ethernet speed requirement and these precise devices protected is more important.

Comparison Traditional Solution

GDT Disadvantage : On application of PoE, due to the arc voltage is less than working after GDT discharge. Because the GDT will break and burn out and short, it becomes huge damage due to its extinguish problem. In order to solve the issue, it's usually to put series of varistors or Sidactor after GDT to prevent extinguishment.

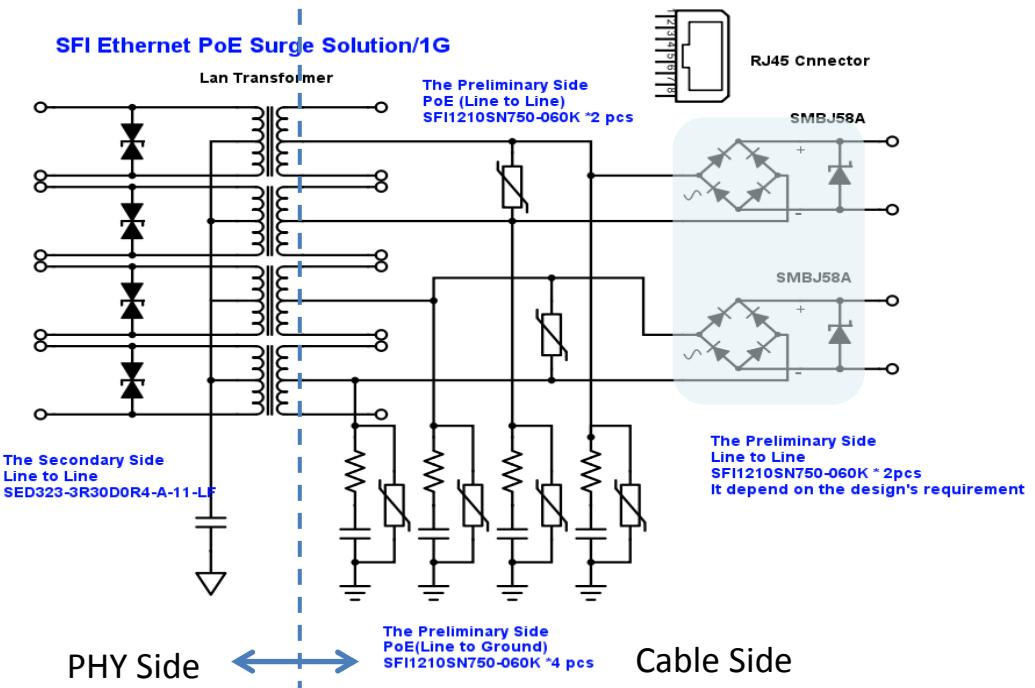

Our CSPD strong characteristics :

- 1). Chip size
- 2). High flow ability
- 3). Low clamping volt
- 4). Quick response time and provide better solution than that.

Application Circuit

The traditional surge solution is to use GDT for protection, when transient voltage occurred, GDT will have a period of **delay** between direct current discharge and exact working. Therefore, it's generally not only use GDTs to protect electronic equipment and add some protective components after GDT. That's the reason why GDT has slow response and remains voltage.

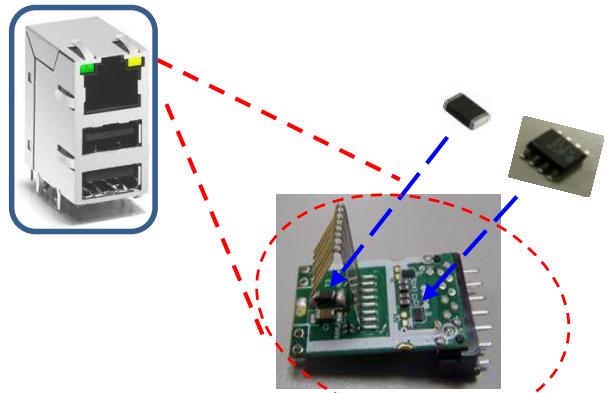

OVER VOLTAGE PROTECTION DEVICE

Application for Ethernet

Description

Now more popular in networking application in indoor and outdoor security all need for the overvoltage and lightning protected. The interface of RJ45, the circuit is 4 wires protection (1,2/3,6). In order to have full protection for 8 wires (1, 2; 3,6; 4,5; 7,8) and prevent the surge attacked, our CSPD products have the good characteristic and small size devices conjunction with the wires and will protect devices.

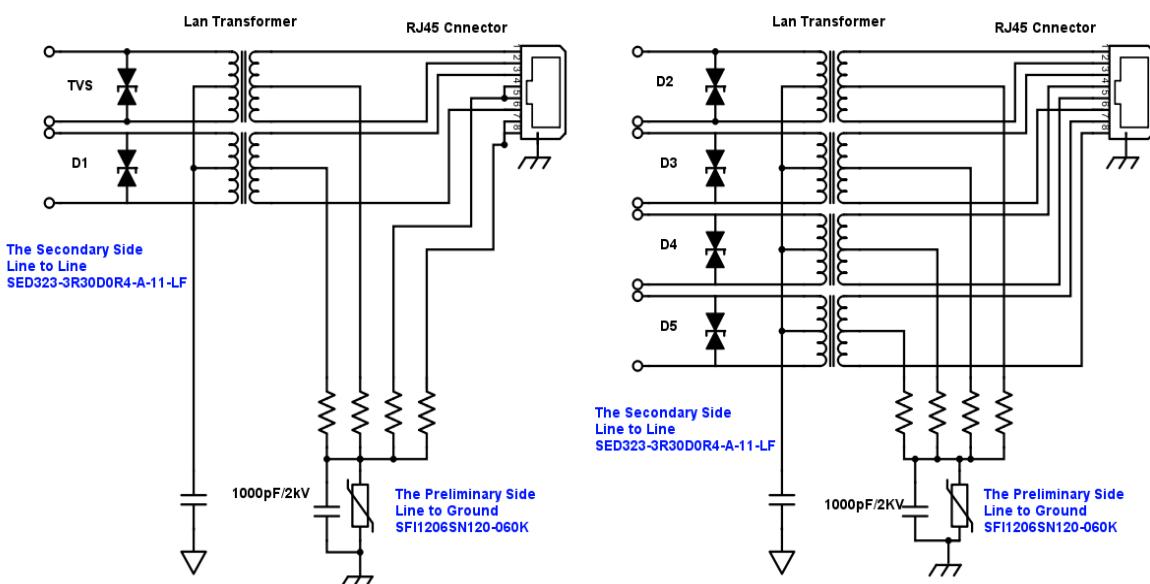

Suggestion

All specification is base on datasheets and subject to change without notice.

Application Circuit

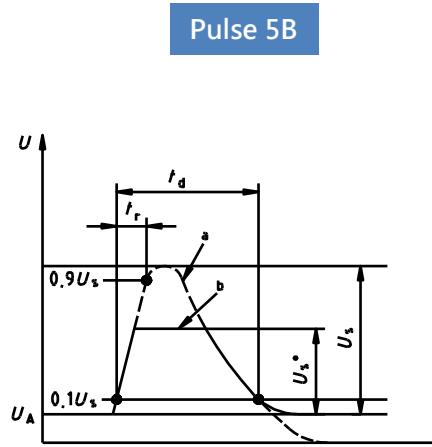

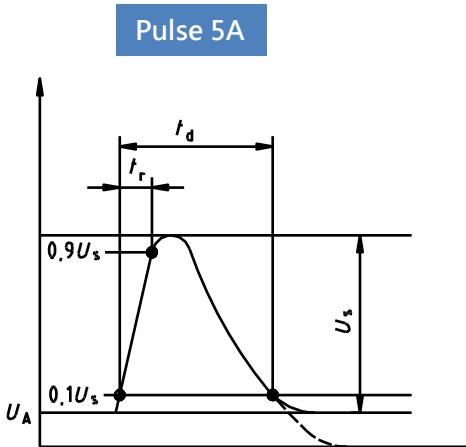

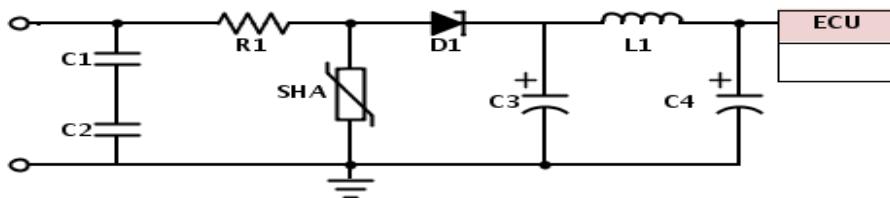

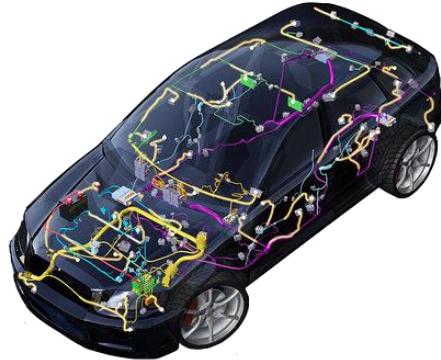

OVER VOLTAGE PROTECTION DEVICE

Application for Automotive

Description

Load Dump – the battery happens short situation when the alternative power in charge process. Besides, it will occur load dump when engine starts and it's the largest energy pulse in whole car. The reason is loading suddenly withdraws when power generator works (ex. battery in charge). Due to the energy of generator release suddenly, the power circuit occurs hundreds of voltage, 5-10ms, half wave 100, 200, 300, 400 etc. Due to the different watt of generator, it will put the suppressor in parallel at the output of ECU to clamp the load dump of generator.

OVER VOLTAGE PROTECTION DEVICE

Characteristic Definition

Characteristic Definition Characteristics	Test Method or Description
Max. Working Voltage	Maximum steady-state DC operating voltage the device can maintain and typical leakage current at 25°C not exceed 50 μ A.
Varistor Voltage (BDV)	With the specified measuring current of 1mA DC applied. Tolerance of breakdown voltage : 5~8V= \pm 20%; 12~18V= \pm 15%; 18~430V= \pm 10%
Max. Clamping Voltage	Maximum peak voltage across the TVS measured at a specified pulse current (A) and waveform 8/20 μ s.
Surge Current	Maximum peak current within varistor voltage change of \pm 10% may be applied with the specified waveform 8/20 μ s.
Surge Shift $\Delta V/V$	The shift of Varistor voltage after suffering the specified surge current.
Energy Absorption	Maximum energy within the varistor voltage change of \pm 10% may be dissipated with a specified waveform 10/1000 μ s .
Typical Capacitance	Device Capacitance measured with the zero voltage bias 0.5V _{RMS} 1KHz; under 100pF measure at 1MHz; Surge series the capacitance is only for reference. The tolerance is 100%
Nonlinear exponenta	$\alpha = [\log (V_{1mA} / V_{0.1mA}) / \log (I_{mA} / I_{0.1mA})]$
Leakage Current	Typical leakage current at 25°C < 50 μ A; Maximum leakage 200 μ A
Cut-off Frequency	It is named of cut-off frequency for the frequency of -3dB insertion loss.

※Standard Test Condition :

Environmental condition under which every measuring is done without doubt on the measuring results.
Unless specially specified, temperature, relative humidity are 5 to 35 °C, 45 to 85% RH.

※ 8/20 μ s waveform current (A)

※ ESD protection waveform current

IEC 61000-4-5, EN 61000-4-5, This generator complies with UL 1449 August 15. 1996 Table B1.1
