BL9193

300mA Ultra-low Noise, Ultra-Fast CMOS LDO Regulator

FEATURES

- Ultra-low Noise for RF Application
- Ultra-Fast Response in Line/Load Transient
- Quick Start-Up (Typically 50μS)
- 0.01μA Standby Current When Shutdown.
- Low Dropout:210mV@300mA
- Wide Operating Voltage Ranges:2V to 6V
- TTL-logic-Controlled Shutdown Input
- Low Temperature Coefficient
- Current Limiting Protection
- Thermal Shutdown Protection
- Only 1μF Output Capacitor Required for Stability
- High Power Supply Rejection Ratio
- Custom Voltage Available
- Fast output discharge
- Available in 5-Lead SOT-23 and SC-70 Package

APPLICATIONS

- Cellular and Smart Phones
- Battery-Powered Equipment
- Laptop, Palmtops,Notebook Computers
- Hand-Held Instruments
- PCMCIA Cards
- MP3/MP4/MP5 Players
- Portable Information Appliances

DESCRIPTION

The BL9193 is designed for portable RF and wireless applications with demanding performance and space requirements. The BL9193 performance is optimized for battery-powered systems to deliver ultra low noise and low quiescent current. A noise bypass pin is available for further reduction of output noise. Regulator ground current increases only slightly in dropout, further prolonging the battery life. The BL9193 also works with low-ESR ceramic capacitors, reducing the amount of board space necessary for power applications, critical in hand-held wireless devices. The BL9193 consumes less than 0.01μA in shutdown mode and has fast turn-on time less than 50μs. The other features include ultra low dropout voltage, high output accuracy, current limiting protection, and high ripple rejection ratio. Available in the 5-lead of SC-70, SOT-23 packages.

ORDERING INFORMATION

BL9193 XX X X X XXX

Package:
RN: SOT-23-5
URN: SC-70-5

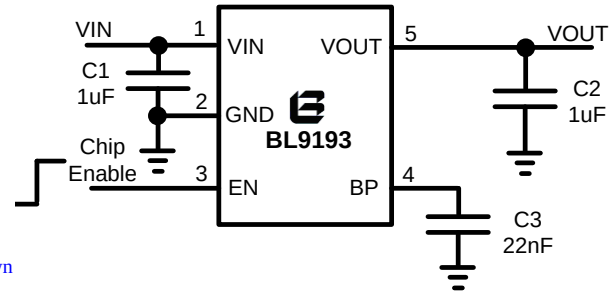
Features
P: Standard (default, lead free)
C: Customized

Enable Option:
A: active high with internal 8 MΩ pull down
B: active high with external pull down
C: active low with internal 2 MΩ pull up
D: active low with external pull up

Output Voltage Accuracy
A: ±1%
B: ±2%

Output Voltage:
12:1.2V 15:1.5V 18:1.8V 25:2.5V
28:2.8V 30:3.0V 33:3.3V
CT: custom fixed output (50mV step)
AD: Adjustable

TYPICAL APPLICATION



Application hints:

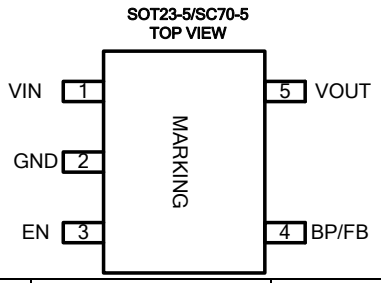
Output capacitor (C2≥2.2uF) is recommended in BL9193-1.2V，BL9193-1.5V，BL9193-1.8V application to assure the stability of circuit.

Absolute Maximum Rating (Note 1)

Input Supply Voltage (V_{CC})	-0.3V to +6V
EN Input Voltage	-0.3V to +V_{in}
Output Voltage	-0.3V to Vin+0.3V
BP Voltage	-0.3V to +6V
Output Current	300mA

Maximum Junction Temperature	125°C
Operating Temperature Range(Note2)	-40°C to 85°C
Storage Temperature Range	-65°C to 125°C
Lead Temperature (Soldering, 10s)	300°C

Package Information



Part Number	Top Mark	Temp Range
BL9193-12BA	C A Y W(Note3)	-40°C to +85°C
BL9193-15BA	C B Y W	-40°C to +85°C
BL9193-18BA	C C Y W	-40°C to +85°C
BL9193-25BA	C D Y W	-40°C to +85°C
BL9193-28BB	C E Y W	-40°C to +85°C
BL9193-30BA	C F Y W	-40°C to +85°C
BL9193-33BA	C G Y W	-40°C to +85°C
BL9193-12BB	C H Y W	-40°C to +85°C
BL9193-28BA	C I Y W	-40°C to +85°C
BL9193-ADBA	C J Y W	-40°C to +85°C

Thermal Resistance (Note 4):

Package	Θ_{JA}	Θ_{JC}
SOT23-5	250°C/W	130°C/W
SC70-5	333°C/W	170°C/W

Y	8	9	0	1	…
Year	2018	2019	2020	2021	…

W	A	…	Y	Z	a	…	y	z
Week	1	…	25	26	27	…	51	52

Note 1: Absolute Maximum Ratings are those values beyond which the life of a device may be impaired.
Note 2: The BL9193 is guaranteed to meet performance specifications from 0°C to 70°C. Specifications over the –40°C to 85°C operating temperature range are assured by design, characterization and correlation with statistical process controls.
Note 3: Y: Year of manufacturing W: Week of manufacturing
Note 4: Thermal Resistance is specified with approximately 1 square of 1 oz copper.

Pin Description

PIN	NAME	FUNCTION
1	VIN	Power Input Voltage.
2	GND	Ground.
3	EN	Chip Enable Pin with four options. A: active high with internal 8 MΩ pull down B: active high with external pull down C: active low with internal 2 MΩ pull up D: active low with external pull up
4	BP/FB	Reference Noise Bypass. FB pin for adjustable version.
5	VOUT	Output Voltage.

Electrical Characteristics (Note 5)

(V_{IN}=3.6V, EN=V_{IN}, C_{IN}=C_{OUT}=1μF, C_{BP}=22nF, T_A=25℃, unless otherwise noted.)

Parameter		Symbol	Conditions	MIN	TYP	MAX	unit
Input Voltage		V_{IN}		2		6	V
Output Voltage Accuracy (Note 6)		ΔV_{OUT}	V_{IN}=3.6V, I_{OUT}=1mA	-1		+1	%
				-2		+2	
			V_{IN}=3.4V, I_{OUT}=300mA	-2.5		+2.5	
Current Limit		I_{LIM}	R_{LOAD}=1Ω	400	430		mA
Quiescent Current		I_Q	V_{EN}>1.2V, I_{OUT}=0mA		90	130	μA
Dropout Voltage		V_{DROP}	I_{OUT}=200mA, V_{OUT}=2.8V		130	180	mV
			I_{OUT}=300mA, V_{OUT}=2.8V		210	300	
Line Regulation (Note 7)		ΔV_{LINE}	V_{IN}=3.6V to 5.5V I_{OUT}=1mA		0.05	0.17	%/V
Load Regulation (Note 8)		ΔV_{LOAD}	1mA<I_{OUT}<300mA			2	%/A
Output Voltage (Note 9) Temperature Coefficient		TC_{VOUT}	I_{OUT}=1mA		±60		ppm/℃
Standby Current		I_{STBY}	V_{EN}=GND,Shutdown		0.01	1	μA
EN Input Bias Current		I_{IBSD}	V_{EN}=GND or V_{IN}			1	μA
EN Input Threshold	Logic Low	V_{IL}	V_{IN}=3V to 5.5V, Shutdown			0.4	V
	Logic High	V_{IH}	V_{IN}=3V to 5.5V, Start up	1.2			V
Output Noise Voltage		e_{NO}	10Hz to100KHz, I_{OUT}=200mA C_{OUT}=1uF		100		μV_{RMS}
Power Supply Rejection Ratio	f=217Hz	PSRR	Cout=1uF, Iout=100mA		-80		dB
	f=1KHz				-78		
	f=10KHz				-65		
Thermal Shutdown Temperature		T_{SD}	Shutdown, Temp increasing		165		℃
Thermal Shutdown Hysteresis		T_{SDHY}			30		℃

Note 5: 100% production test at +25°C. Specifications over the temperature range are guaranteed by design and characterization.

Note 6: This IC includes two kinds of output voltage accuracy versions.A: ±1%, B: ±2%.

Note 7: Line regulation is calculated by $\Delta V_{LINE} = \left(\frac{V_{OUT1} - V_{OUT2}}{\Delta V_{IN} \times V_{OUT(normal)}} \right) \times 100$

Where V_{OUT1} is the output voltage when V_{IN}=5.5V, and V_{OUT2} is the output voltage when V_{IN}=3.6V, △V_{IN}=1.9V .V_{OUT}(normal)=2.8V.

Note 8: Load regulation is calculated by $\Delta V_{LOAD} = \left(\frac{V_{OUT1} - V_{OUT2}}{\Delta I_{OUT} \times V_{OUT(normal)}} \right) \times 100$

Where V_{OUT1} is the output voltage when I_{OUT}=1mA, and V_{OUT2} is the output voltage when I_{OUT}=300mA. △I_{OUT}=0.299A, V_{OUT}(normal)=2.8V.

Note 9: The temperature coefficient is calculated by $TC_{V_{OUT}} = \frac{\Delta V_{OUT}}{\Delta T \times V_{OUT}}$

Applications Information

Like any low-dropout regulator, the external capacitors used with the BL9193 must be carefully selected for regulator stability and performance. Using a capacitor whose value is > 1μF on the BL9193 input and the amount of capacitance can be increased without limit. The input capacitor must be located a distance of not more than 0.5 inch from the input pin of the IC and returned to a clean analog ground. Any good quality ceramic or tantalum can be used for this capacitor. The capacitor with larger value and lower ESR (equivalent series resistance) provides better PSRR and line-transient response. The output capacitor must meet both requirements for minimum amount of capacitance and ESR in all LDOs application. The BL9193 is designed specifically to work with low ESR ceramic output capacitor in space-saving and performance consideration. Using a ceramic capacitor whose value is at least 1μF with ESR is > 25mΩ on the BL9193 output ensures stability. The BL9193 still works well with output capacitor of other types due to the wide stable ESR range. Output capacitor of larger capacitance can reduce noise and improve load transient response, stability, and PSRR. The output capacitor should be located not more than 0.5 inch from the V_{OUT} pin of the BL9193 and returned to a clean analog ground.

Bypass Capacitor and Low Noise

Connecting a 22nF between the BP pin and GND pin significantly reduces noise on the regulator output, it is critical that the capacitor connection between the BP pin and GND pin be direct and PCB traces should be as short as possible. There is a relationship between the bypass capacitor value and the LDO regulator turn on time. DC leakage on this pin can affect the LDO regulator output noise and voltage regulation performance.

Enable Function

The BL9193 features an LDO regulator enable/disable function. To assure the LDO regulator will switch on; the EN turn on control level must be greater than 1.2 volts. The LDO regulator will go into the shutdown mode when the voltage on the EN pin falls below 0.4 volts. For to protect the

system, the BL9193 have a quick discharge function. If the enable function is not needed in a specific application, it may be tied to VIN to keep the LDO regulator in a continuously on state.

Programming the BL9193 Adjustable LDO regulator

The output voltage of the BL9193 adjustable regulator is programmed using an external resistor divider as show in Figure as below. The output voltage is calculated using equation as below:

$$V_{OUT} = V_{REF} \times \left(1 + \frac{R1}{R2}\right)$$

Where:

V_{REF}=1.23V typ (the internal reference voltage)

Resistors R1 and R2 should be chosen for approximately 50uA divider current. Lower value resistors can be used for improved noise performance, but the solution consumes more power. Higher resistor values should be avoided as leakage current into/out of FB across R1/R2 creates an offset voltage that artificially increases/decreases the feedback voltage and thus erroneously decrease/increases V_{OUT}. The recommended design procedure is to choose R2=30.1kΩ to set the divider current at 50uA, C1=22pF for stability, and then calculate using Equation as below:

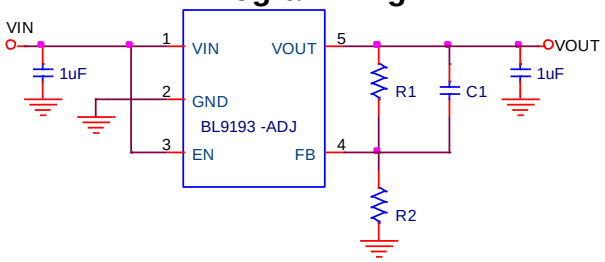
$$R1 = \left(\frac{V_{OUT}}{V_{REF}} - 1\right) \times R2$$

In order to improve the stability of the adjustable version, it is suggested that a small compensation capacitor be placed between OUT and FB. The suggested value of this capacitor for several resistor ratios is shown in the table below.

OUTPUT VOLTAGE PROGRAMMING GUIDE

OUTPUT VOLTAGTE	R1	R2	C1
1.8V	13.9 kΩ	30.1 kΩ	22pF
2.5V	31.6 kΩ	30.1 kΩ	22pF
3.3V	51 kΩ	30.1 kΩ	22pF
3.6V	59 kΩ	30.1 kΩ	22pF

BL9193 Adjustable LDO regulator Programming



Thermal Considerations

Thermal protection limits power dissipation in BL9193. When the operation junction temperature exceeds 165°C, the OTP circuit starts the thermal shutdown function turn the pass element off. The pass element turns on again after the junction temperature cools by 30°C.

For continue operation, do not exceed absolute maximum operation junction temperature 125°C. The power dissipation definition in device is:

$P_D = (V_{IN} - V_{OUT}) \times I_{OUT} + V_{IN} \times I_Q$

The maximum power dissipation depends on the thermal resistance of IC package, PCB layout, the rate of surroundings airflow and temperature difference between junction to ambient. The maximum power dissipation can be calculated by following formula：

$P_D(MAX) = (T_J(MAX) - T_A) / \theta_{JA}$

Where $T_J(MAX)$ is the maximum operation junction temperature 125°C, T_A is the

ambient temperature and the θ_{JA} is the junction to ambient thermal resistance. For recommended operating conditions specification of BL9193, where T_J(MAX) is the maximum junction temperature of the die (125°C) and T_A is the maximum ambient temperature. The junction to ambient thermal resistance (θ_{JA} is layout dependent) for SOT-23-5 package is 250°C/W, SC-70-5 package is 333°C/W, on standard JEDEC 51-3 thermal test board. The maximum power dissipation at T_A= 25°C can be calculated by following formula:

P_D(MAX) = (125°C−25°C)/333 = 300mW (SC-70-5)

P_D(MAX) = (125°C−25°C)/250 = 400mW (SOT-23-5)

The maximum power dissipation depends on operating ambient temperature for fixed T_J(MAX) and thermal resistance θ_{JA}. It is also useful to calculate the junction of temperature of the BL9193 under a set of specific conditions. In this example let the Input voltage V_{IN}=3.3V, the output current Io=300mA and the case temperature T_A=40°C measured by a thermal couple during operation. The power dissipation for the Vo=2.8V version of the BL9193 can be calculated as:

P_D = (3.3V−2.8V) ×300mA+3.6V×100uA
=150mW

And the junction temperature, T_J, can be calculated as follows:

$T_J=T_A+P_D\times\theta_{JA}$=40°C+0.15W×250°C/W
=40°C+37.5°C=77.5°C<T_J(MAX) =125°C

For this operating condition, T_J is lower than the absolute maximum operating junction temperature,125°C, so it is safe to use the BL9193 in this configuration.

Layout considerations

To improve ac performance such as PSRR, output noise, and transient response, it is recommended that the PCB be designed with separate ground planes for V_{IN} and V_{OUT}, with each ground plane connected only at the GND pin of the device. In addition, the ground connection for the bypass capacitor should connect directly to the GND pin of the device.
