I_{hold} = Hold current: maximum current device will pass without tripping in 23°C still air.

R_{min} = Minimum resistance of device in initial (un-soldered) state.

I_{trip} = Trip current: minimum current at which the device will trip in 23°C still air.

R_{typ} = Typical resistance of device in initial (un-soldered) state.

V_{int} = Maximum voltage the device can withstand without damage at rated current (I_{max})

V_{op} = The device regular operation voltage

I_{max} = Maximum fault current device can withstand without damage at rated voltage (V_{max})

P_d = Power dissipated from device when in the tripped state at 23°C still air.

R_{1max} = Maximum resistance of device at 20°C measured one hour after tripping.

Caution: Operation beyond the specified rating may result in damage and possible arcing and flame.

Soldering Parameters - Solder Reflow

Condition	Reflow
Peak Temp/ Duration Time	260°C ≥ 5 Sec
≥ 220°C	30 Sec ~ 60 Sec
Preheat 160°C ~ 190°C	60 Sec ~ 90 Sec
Storage Condition	0°C~35°C, ≤ 70%RH

- Recommended reflow methods: IR, vapor phase oven, hot air oven, N₂ environment for lead-free.
- Devices are not designed to be wave soldered to the bottom side of the board.
- Devices can be cleaned using standard industry methods and solvents.

Note: If reflow temperatures exceed the recommended profile, devices may not meet the performance requirements.
