

ZMOTION® Lenses

Product Specification

PS028610-1114

Warning: DO NOT USE THIS PRODUCT IN LIFE SUPPORT SYSTEMS.

LIFE SUPPORT POLICY

ZILOG'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS PRIOR WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF ZILOG CORPORATION.

As used herein

Life support devices or systems are devices which (a) are intended for surgical implant into the body, or (b) support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in a significant injury to the user. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system or to affect its safety or effectiveness.

Revision History

Each instance in the revision history table reflects a change to this document from its previous revision. For more details, refer to the corresponding pages or appropriate links provided in the table below.

Date	Revision Level	Description	Page
Nov 2014	10	Changed focus of spec to cover ZMOTION lenses only; see related ZMOTION Pyroelectric Sensors Product Specification (PS0336).	All
Feb 2013	09	Moved NCL-11 lens specification to Table 1 ; added the CM 0.77 GI V2 lens specification; alphanumerically reordered all lenses.	2 , 7
May 2012	08	Added the NCL-11 and EWA 0.3 GI V2 lens specifications.	35 , 17
Nov 2011	07	Added the NCL-3R and NCL-10S lens specifications.	21 , 33
Mar 2011	06	Intrusion lens specifications added.	37
Jan 2011	05	Modifications to some lens/sensor descriptions in Table 1 .	2
Jan 2011	04	Updated to include two new Nicera sensors.	18 , 28
Nov 2010	03	Updated to new Zilog/IXYS logo and accepted Zilog style; replaced all instances of <i>ePIR</i> with <i>advanced passive infrared</i> .	All
Sep 2010	02	Replaced Zilog logos, ePIR with ZMOTION, and Zdots with Module; fixed formatting and pagination issues; removed references to GP and General Purpose.	All
Oct 2010	01	Original issue	All

Overview

Zilog's ZMOTION Detection and Control and Intrusion Detection product families provide integrated and flexible solutions for Passive Infrared (PIR)-based motion detection applications. These product families are based on the ZMOTION MCU, a high-performance microcontroller featuring integrated PIR motion detection algorithms. Each family includes a selection of lenses and PIR sensors to fit a wide range of application requirements. Each lens combination is optimized for its intended application by configuration settings loaded into the ZMOTION MCU ensuring the best possible performance while significantly reducing development risk and minimizing time to market. Zilog's PIR Motion Detection Technology provides a dramatic improvement in both sensitivity and stability over traditional designs and is scalable to many market segments including Security/Intrusion Detection, Lighting Control, HVAC, Access Control, Vending, Display, Proximity, Power Management, Occupancy Sensing and many others.

This document provides the zone patterns and mechanical dimensions for the Zilog-supported lenses included in the ZMOTION Family. Each supported lens combination is provided with an associated configuration file for the ZMOTION MCU. It is possible to use other lenses not directly supported by Zilog by developing the appropriate configuration settings based on one of the existing files.

There are two general groups of lenses provided:

- ZMOTION Detection and Control for general motion detection applications
- ZMOTION Intrusion Detection for security applications

These lens groupings are based on typical usage; any of these lenses could be used for a variety of applications and are not limited to these suggested applications. All lenses listed in this document are available from Zilog or from their associated manufacturers. Because Zilog is regularly adding new lens support to these ZMOTION product families, please obtain the latest version of this document from our website at: www.zilog.com/ZMOTION.

► **Note:** To review the configuration files for specific lens and sensor combinations, refer to the [ZMOTION Detection Lens and Pyroelectric Sensor Configuration Guide \(WP0018\)](#).

ZMOTION Lens Selection Guide

Select a lens and pyroelectric sensor based on the intended application from Table 1. Lenses for security/intrusion-related applications are listed in Table 2. To see the specifications for lenses used in security and intrusion detection applications, refer to the [ZMOTION Pyroelectric Sensors Specification \(PS0336\)](#).

ZMOTION Detection and Control Lens Specifications

Figures 1 through 27 on the following pages discuss the specifications of the lenses selected for the ZMOTION Detection and Control family of products. To see specifications for lenses used in security and intrusion detection applications, refer to the [ZMOTION Intrusion Detection Lens Specifications](#) section on page 37.

ZAA09GIT1 Lens Specification

The ZAA09GIT1 lens array is optimized for dual-element pyroelectric sensors in long range sensing applications. It is normally used with the grooved side facing the pyroelectric detector, and curved at a 0.9 inch (22.9mm) radius about the sensitive area of the detector. The detector position should be 0.492" (12.5 mm) below the upper edge, and centered left-right.

Figure 1. The ZAA09GIT1 Lens Specification

ZCM077GIV2 Lens Specification

The ZCM077GIV2 lens is intended for high ceiling-mounted commercial lighting and HVAC applications in which high floor coverage is required. See Figures 2 and 3.

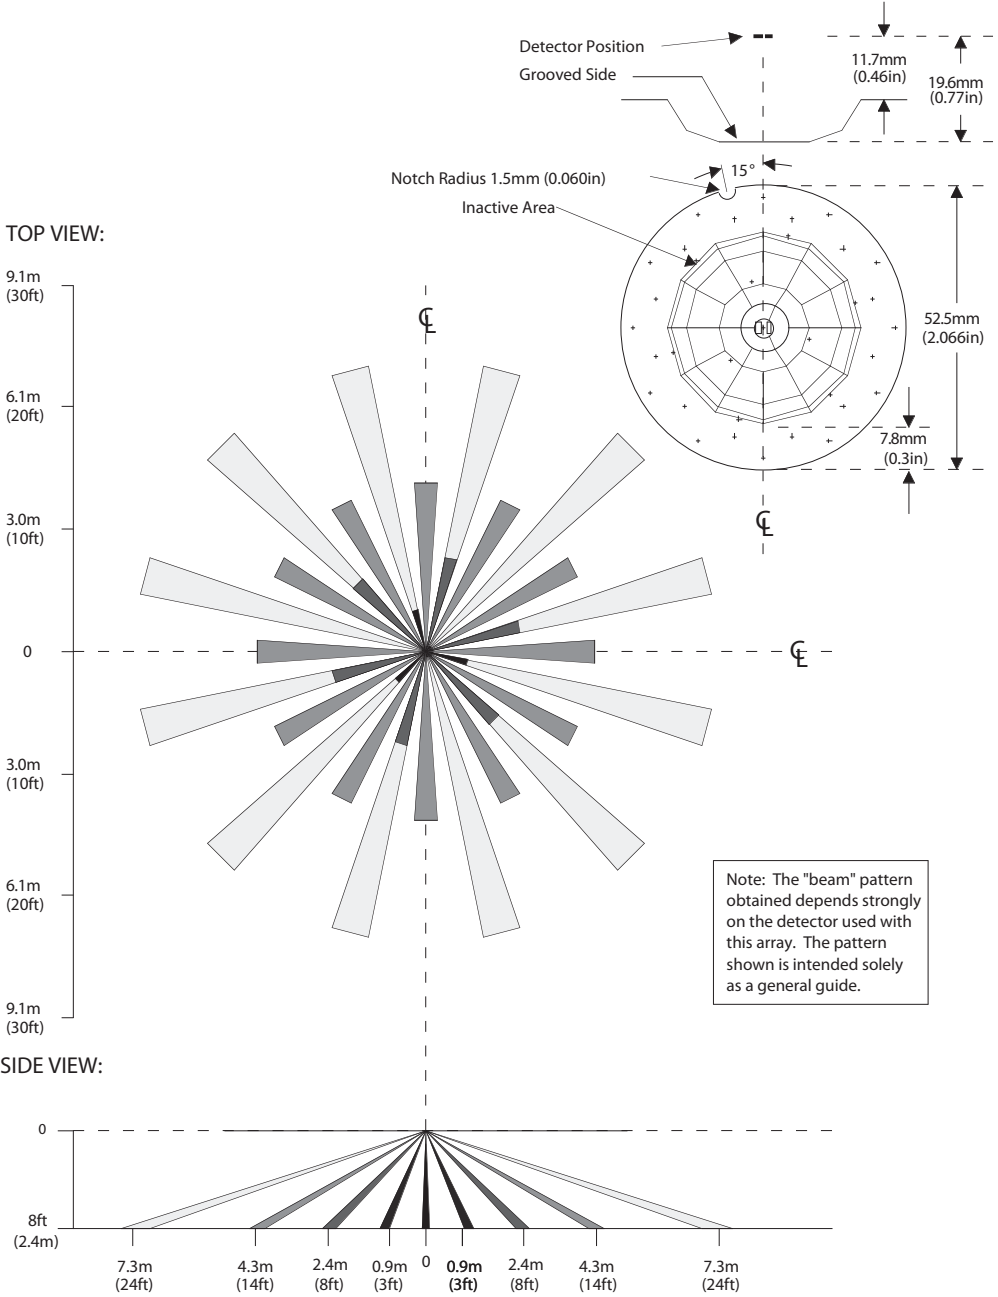

Figure 2. The ZCM077GIV2 Lens Specification: Front View

SIDE VIEW:

Figure 3. The ZCM077GIV2 Lens Specification: Floor Coverage, Side View

ZCM077GIV3 Lens Specification

The ZCM077GIV3 lens array is intended for ceiling-mounted applications and is optimized for use with both dual and quad element pyroelectric sensors. The detector mounting flange should be 0.46" (11.7 mm) from the pyroelectric sensor's element. The angle from the center line to the placement notch is 15 degrees.

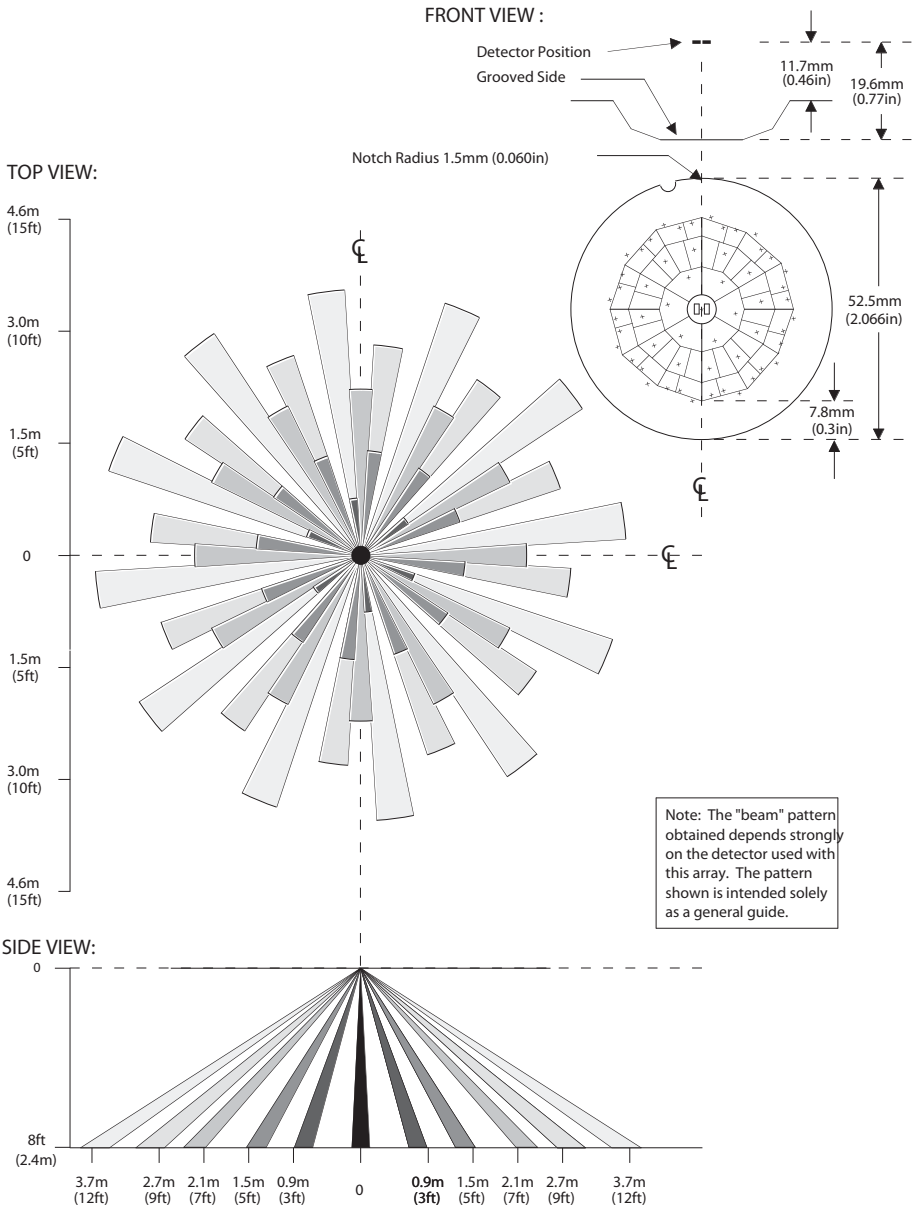

Figure 4. The ZCM077GIV3 Lens Specification, #1 of 2

ZCM077GIV5 Lens Specification

The ZCM077GIV5 lens array is intended for ceiling-mounted applications and is optimized for both dual and quad element pyroelectric detectors. The detector mounting flange should be 0.46" (11.7 mm) from the pyroelectric sensor's element.

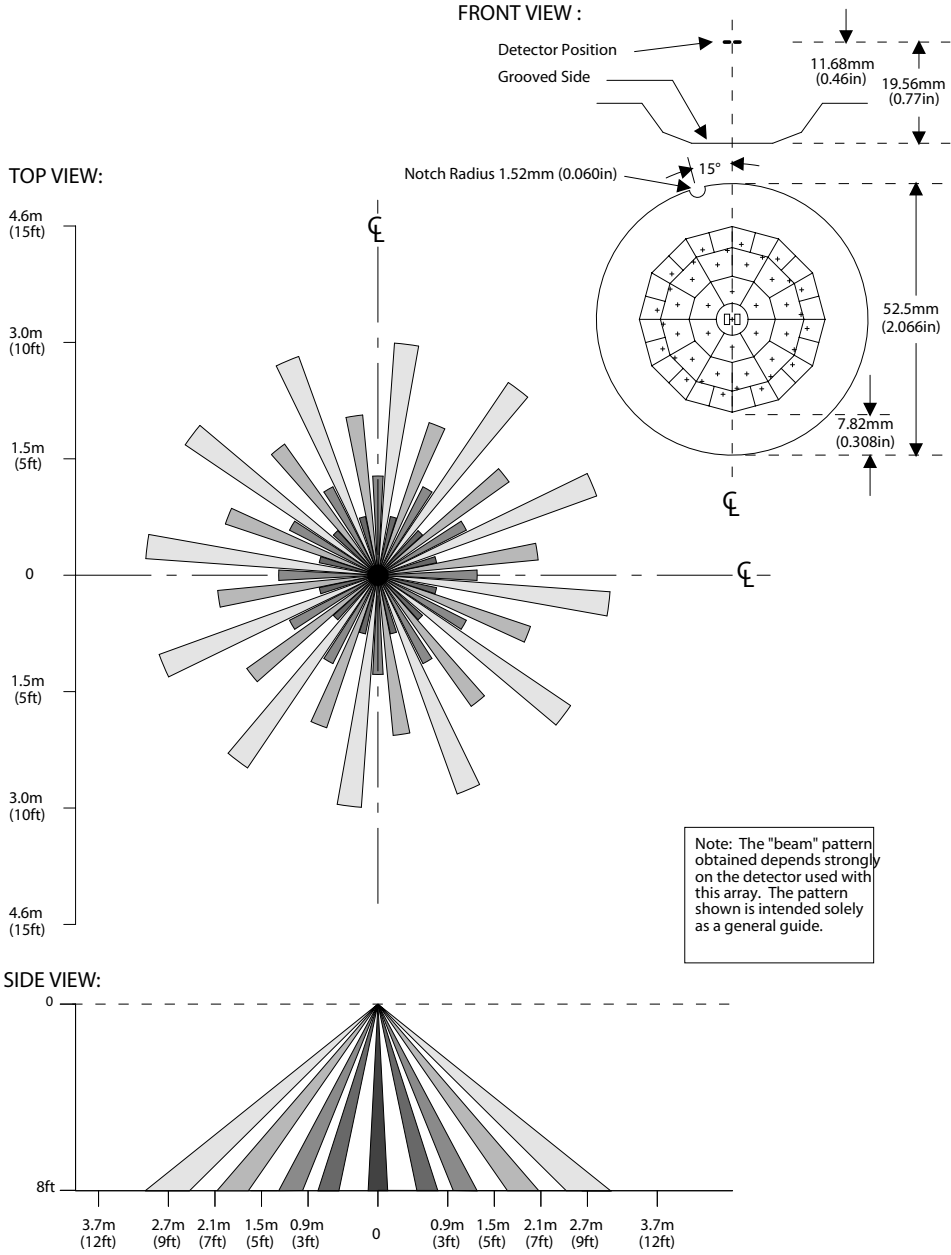

Figure 6. The ZCM077GIV5 Lens Specification, #1 of 3

Figure 7. The ZCM077GIV5 Lens Specification, #2 of 3

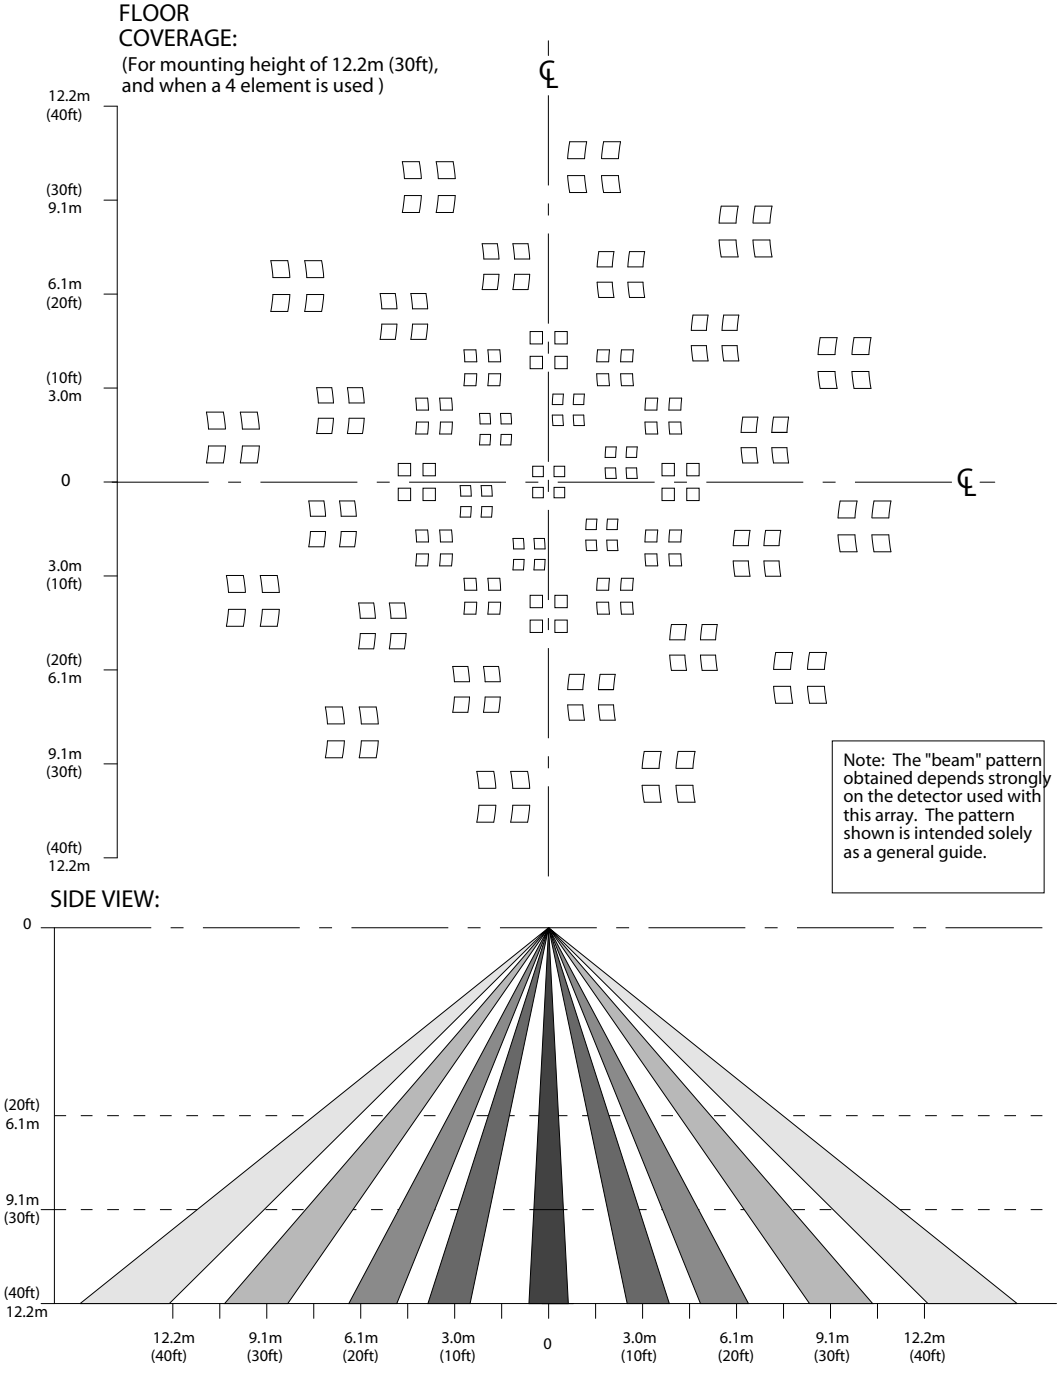

Figure 8. The ZCM077GIV5 Lens Specification, #3 of 3

ZCWM05GIV1 Lens Specification

The CWM 0.5 GI V1 lens array is intended for both wall and ceiling-mounted applications and is optimized for both dual and quad element pyroelectric detectors. The lens is intended to clip directly into the circuit board over top of the pyroelectric sensor.

Figure 9. The ZCWM05GIV1 Lens Specification: Wall Mount

Figure 11. The ZCWM05GIV1 Lens Specification: Ceiling Mount, #2 of 2

ZEWA03GIV2 Lens Specification

The ZEWA03GIV2 lens is intended for wall-mounted room occupancy and proximity sensing applications in which an extra-wide sensing angle is required. See Figure 12.

Figure 12. The ZEWA03GIV2 Lens Specification, Dimensions

ZNCL3B Lens Specification

The ZNCL3B lens is intended for wall-mounted entrance and proximity-sensing applications.

Figure 13. The ZNCL3B Lens Dimensions

Figure 14. The ZNCL3B Lens Specification, X Axis

Figure 15. The ZNCL3B Lens Specification, Y Axis

ZNCL10R Lens Specification

The ZNCL10R lens is intended for ceiling-mounted entrance and proximity-sensing applications. This lens features two orientations, Tab A and Tab B, that can be used with the pyroelectric sensor to provide different beam patterns. Figures 16 through 19.

ZMOTION Intrusion Detection Lens Specifications

Figures 32 through 34 provide the zone patterns and mechanical dimensions for the ZMOTION Intrusion Detection family of products. Recommended placement of the pyroelectric sensor is provided with the detector and lens inclined downward at an angle of 12 degrees. If you wish to use a tilt angle other than 12 degrees while maintaining the specified zone patterns, move the pyroelectric sensor up by 0.021" (0.53mm) for each degree less than 12 degrees, or down by the same amount for each degree greater than 12 degrees.

The ZLR12GI12V3, ZVB12GIV1, and ZWA12GI12V4 lenses can be interchanged in the same end product without modifications to the placement or angle of the lens.

These lenses may also be used in nonintrusion applications. For additional lenses that do not require security/intrusion detection capabilities, refer to the [ZMOTION Detection and Control Lens Specifications](#) section on page 5.

ZLR12GI12V3 Lens Specification

The ZLR12GI12V3 lens array is optimized for dual-element pyroelectric sensors in long-range corridor security applications. It is normally used with the grooved side facing the pyroelectric detector, and curved at a 1.2 inch (30.5 mm) radius about the sensitive area of the detector. The detector and the lens array should be inclined downward at an angle of 12 degrees. If you wish to use a tilt angle other than 12 degrees while maintaining the specified zone pattern, move the pyroelectric sensor up by 0.021" (0.53 mm) for each degree less than 12 degrees, or down by the same amount for each degree greater than 12 degrees. The detector position should be 0.812" (20.6 mm) below the upper edge, and centered left-to-right.

Figure 32. ZLR12GI12V3 Lens Specification

ZVB12GIV1 Lens Specification

The ZVB12GIV1 lens array is optimized for dual-element pyroelectric sensors in vertical barrier or curtain-type security applications. It is normally used with the grooved side facing the pyroelectric detector, and curved at a 1.2 inch (30.5 mm) radius about the sensitive area of the detector. The detector and the lens array should be inclined downward at an angle of 12 degrees. If you wish to use a tilt angle other than 12 degrees while maintaining the specified zone pattern, move the pyroelectric sensor up by 0.021" (0.53mm) for each degree less than 12 degrees, or down by the same amount for each degree greater than 12 degrees. The detector position should be 0.812" (20.6 mm) below the upper edge, and centered left-to-right.

Figure 33. ZVB12GIV1 Lens Specification

ZWA12GI12V4 Lens Specification

The ZWA12GI12V4 lens array is optimized for dual-element pyroelectric sensors in large-area security applications. It is normally used with the grooved side facing the pyroelectric detector, and curved at a 1.2 inch (30.5mm) radius about the sensitive area of the detector. The detector and the lens array should be inclined downward at an angle of 12 degrees. If you wish to use a tilt angle other than 12 degrees while maintaining the specified zone pattern, move the pyroelectric sensor up by 0.021" (0.53mm) for each degree less than 12 degrees, or down by the same amount for each degree greater than 12 degrees. The detector position should be 0.812" (20.6mm) below the upper edge, and centered left-to-right.
