MINI analog multiplexer, generates one analog output from 8 analog input signals, for MINI analog module with screw connection.

Product Description

The multiplexer makes it possible to create one analog output from 8 analog input signals. When running in 1 or 2 second cycles, with the multiplexer, 8, 6, 4, or 2 parallel analog signals can be transmitted serially, therefore successively. Suitable for MINI Analog modules with screw connection method.

Your advantages

- System cabling on the output side using pre-assembled FLK cables with open ends
- Huge reduction in analog inputs at controllers
- Can be easily snapped onto MINI Analog modules with screw connection technology
- For 4 mA ... 20 mA current signals
- Generates an analog output from up to eight analog input signals – parallel analog signals are transmitted serially via a cable
- The desired number of channels is selected via DIP switches (8, 6, 4 or 2 channels)
- The channel currently switched is indicated as a bit pattern via three digital outputs
- Two clock cycles for execution can be selected via DIP switches (one or two-second clock)
- Supplied by an output loop
