# **Notice for TAIYO YUDEN Products**

Please read this notice before using the TAIYO YUDEN products.

# REMINDERS

Product information in this catalog is as of October 2018. All of the contents specified herein are subject to change without notice due to technical improvements, etc. Therefore, please check for the latest information carefully before practical application or use of our products.

Please note that TAIYO YUDEN shall not be in any way responsible for any damages and defects in products or equipment incorporating our products, which are caused under the conditions other than those specified in this catalog or individual product specification sheets.

- Please contact TAIYO YUDEN for further details of product specifications as the individual product specification sheets are available.
- Please conduct validation and verification of our products in actual condition of mounting and operating environment before using our products.
- The products listed in this catalog are intended for use in general electronic equipment (e.g., AV equipment, OA equipment, home electric appliances, office equipment, information and communication equipment including, without limitation, mobile phone, and PC) and medical equipment classified as Class I or II by IMDRF. Please be sure to contact TAIYO YUDEN for further information before using the products for any equipment which may directly cause loss of human life or bodily injury (e.g., transportation equipment including, without limitation, automotive powertrain control system, train control system, and ship control system, traffic signal equipment, disaster prevention equipment, medical equipment classified as Class III by IMDRF, highly public information network equipment including, without limitation, telephone exchange, and base station).

Please do not incorporate our products into any equipment requiring high levels of safety and/or reliability (e.g., aerospace equipment, aviation equipment\*, medical equipment classified as Class IV by IMDRF, nuclear control equipment, undersea equipment, military equipment).

\*Note: There is a possibility that our products can be used only for aviation equipment that does not directly affect the safe operation of aircraft (e.g., in-flight entertainment, cabin light, electric seat, cooking equipment) if such use meets requirements specified separately by TAIYO YUDEN. Please be sure to contact TAIYO YUDEN for further information before using our products for such aviation equipment.

When our products are used even for high safety and/or reliability-required devices or circuits of general electronic equipment, it is strongly recommended to perform a thorough safety evaluation prior to use of our products and to install a protection circuit as necessary.

Please note that unless you obtain prior written consent of TAIYO YUDEN, TAIYO YUDEN shall not be in any way responsible for any damages incurred by you or third parties arising from use of the products listed in this catalog for any equipment requiring inquiry to TAIYO YUDEN or prohibited for use by TAIYO YUDEN as described above.

- Information contained in this catalog is intended to convey examples of typical performances and/or applications of our products and is not intended to make any warranty with respect to the intellectual property rights or any other related rights of TAIYO YUDEN or any third parties nor grant any license under such rights.
- Please note that the scope of warranty for our products is limited to the delivered our products themselves and TAIYO YUDEN shall not be in any way responsible for any damages resulting from a fault or defect in our products. Notwithstanding the foregoing, if there is a written agreement (e.g., supply and purchase agreement, quality assurance agreement) signed by TAIYO YUDEN and your company, TAIYO YUDEN will warrant our products in accordance with such agreement.
- The contents of this catalog are applicable to our products which are purchased from our sales offices or authorized distributors (hereinafter "TAIYO YUDEN's official sales channel"). Please note that the contents of this catalog are not applicable to our products purchased from any seller other than TAIYO YUDEN's official sales channel.
- Caution for Export
  Some of our products listed in this catalog may require specific procedures for export according to "U.S. Export
  Administration Regulations", "Foreign Exchange and Foreign Trade Control Law" of Japan, and other applicable
  regulations. Should you have any questions on this matter, please contact our sales staff.

# CHIP BEAD INDUCTORS FOR POWER LINES (FB SERIES M TYPE)

■PARTS NUMBER

\*Operating Temp. :  $-40 \sim +125$  °C (Including self-generated heat)

△=Blank space

①Series name

Code	Series name
FB	Ferrite bead

(2) Cl- - - -

Zonape	
Code	Shape
M	Rectangular chip

3Characteristics

Code	Characteristics	
J	Standard	
Н	High Impedance type	

4Dimensions (L × W)

Code	Type (inch)	Dimensions (L×W)[mm]	
1608	1608(0603)	1.6 × 0.8	
2125	2125 (0805)	2.0 × 1.25	
2012	2012(0805)	2.0 × 1.25	
2016	2016(0806)	2.0 × 1.6	
3216	3216(1206)	3.2 × 1.6	
3225	3225(1210)	$3.2 \times 2.5$	
4516	4516(1806)	4.5 × 1.6	
4525	4525(1810)	4.5 × 2.5	
4532	4532(1812)	4.5 × 3.2	

⑤Material

Code	Material	
HS	D-ft :	
НМ	Refer to impedance curves for material differences	
HL	for material differences	

6 Nominal impedance

Code (example)	Nominal impedance[ $\Omega$ ]
330	33
221	220
102	1000

7 Impedance tolerance

Code	Impedance tolerance

# ⑥Top tape strength

The top tape requires a peel-off force of 0.1 to 0.7N in the direction of the arrow as illustrated below.

Finis catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our specification. For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our Web site (http://www.ty-top.com/) .

# CHIP BEAD INDUCTORS FOR POWER LINE (FB SERIES M TYPE)

# ■RELIABILITY DATA

1. Operating Tempe	rature Range
Specified Value	-40°C~+125°C Including self-generated heat
2. Storage Tempera	ture Range
Specified Value	-40°C∼+85°C
Test Methods and Remarks	*Note: -5 to +40°C in taped packaging
3. Impedance	
Specified Value	Within the specified tolerance
Test Methods and Remarks	Measuring equipment : Impedance analyzer (HP4291A) or its equivalent  Measuring frequency : 100±1 MHz
4. DC Resistance	
Specified Value	Within the specified range
Test Methods and Remarks	Four-terminal method  Measuring equipment : Milliohm High-Tester 3226 (Hioki Denki) or its equivalent
5. Rated Current	
Specified Value	Within the specified range
6. Vibration	
Specified Value	Appearance : No significant abnormality Impedance change : Within ±30% of the initial value
Test Methods and Remarks	According to JIS C60068-2-6.  Vibration type : A  Time : 2 hrs each in X,Y, and Z directions Total: 6 hrs  Frequency range : 10 to 55 to 10Hz (/min.)  Amplitude : 1.5 mm (shall not exceed acceleration 196m/s²)  Mounting method : Soldering onto PC board
7. Solderability	
Specified Value	90% or more of immersed surface of terminal electrode shall be covered with fresh solder.
Test Methods and Remarks	Solder temperature : 230±5°C  Immersion time : 4±1 sec.  Preconditioning : Immersion into flux.  Immersion and Removal speed : 25mm/sec.
8. Resistance to So	Idering Heat
Specified Value	Appearance : No significant abnormality  Impedance change : Within ±30% of the initial value
Test Methods and Remarks	Preheating : 150°C for 3 min.  Resistance to Soldering Heat : 260±5°C  Duration : 10±0.5 sec.  Preconditioning : Immersion and Removal speed : 25mm/sec.

Recovery

: 2 to 3 hrs of recovery under the standard condition after the test.

This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our specification. For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our Web site (http://www.ty-top.com/).

#### 9. Thermal Shock : No significant abnormality Appearance Specified Value : Within $\pm 50/-10\%$ of the initial value Impedance change According to JIS C60068-2-14. Conditions for 1 cycle Temperature (°C) Duration (min.) Step -40±3°C $30\pm3$ 2 Room Temperature Within 3 Test Methods and 3 85±2°C 30±3 Remarks 4 Room Temperature Within 3 Number of cycles : 100 Mounting method : Soldering onto PC board Recovery : 2 to 3 hrs of recovery under the standard condition after the removal from test chamber.

10. Resistance to H	10. Resistance to Humidity (steady state)					
Specified Value	Appearances Impedance change	: No significant abnormality : Within $\pm 30\%$ of the initial value				
Test Methods and Remarks	Temperature Humidity Duration Mounting method Recovery	: $40\pm2^{\circ}$ C : 90 to 95% RH : $500+24/-0$ : Soldering onto PC board : 2 to 3 hrs of recovery under the standard condition after the removal from test chamber.				

11. Loading under D	11. Loading under Damp Heat				
Specified Value	Appearance	No significant abnormality			
	Impedance change	Within ±30% of the initial value			
	Temperature	: 40±2°C			
	Humidity	: 90 to 95%RH			
Test Methods and	Applied current	: Rated current			
Remarks	Duration	: 500+24/0 hrs			
	Mounting method	: Soldering onto PC board			
	Recovery	: 2 to 3hrs of recovery under the standard condition after the removal from test chamber.			

12. High Temperatu	12. High Temperature Loading Test				
Specified Value	Appearance Impedance change	: No significant abnormality : Within $\pm 30\%$ of the initial value			
Test Methods and Remarks	Temperature Duration Applied current Mounting method Recovery	: 85±2°C : 500+24/-0 hrs : Rated current : Soldering onto PC board : 2 to 3 hrs of recovery under the standard condition after the removal from test chamber.			

13. Bending Strengt	ng Strength					
Specified Value	Appearance : No mechanical damage.					
Test Methods and Remarks	Warp : 2mm Testing board : Glass epoxy-resin substrate Thickness : 0.8mm  Board R-230 Warp  Warp  (Unit: mm)					

This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our specification. For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our Web site (http://www.ty-top.com/).

# Specified Value No separation or indication of separation of electrode. Applied force : 5N Duration : 10 sec. Hooked jig Remarks Board Cross-section

Note on standard condition: "standard condition" referred to herein is defined as follows:

5 to  $35^{\circ}$ C of temperature, 45 to 85% relative humidity and 86 to 106kPa of air pressure.

When there are questions concerning measurement results:

In order to provide correlation data, the test shall be conducted under condition of  $20\pm2^{\circ}\text{C}$  of temperature, 60 to 70% relative humidity and 86 to 106kPa of air pressure. Unless otherwise specified, all the tests are conducted under the "standard condition."

This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our specification. For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our Web site (http://www.ty-top.com/).

# CHIP BEAD INDUCTORS FOR POWER LINE (FB SERIES M TYPE)

#### **PRECAUTIONS**

#### 1. Circuit Design

Precautions

#### ◆Operating environment

# 1. The products described in this specification are intended for use in general electronic equipment, (office supply equipment, telecommunications systems, measuring equipment, and household equipment). They are not intended for use in mission-critical equipment or systems requiring special quality and high reliability (traffic systems, safety equipment, aerospace systems, nuclear control systems and medical equipment including life-support systems,) where product failure might result in loss of life, injury or damage. For such uses, contact TAIYO YUDEN Sales Department in advance.

#### ◆Rated current

Rated current of this product is shown in this catalogue, but please be sure to have the base board designed with adequate inspection in
case of the generation of heat becomes high within the rated current range when the base board is in high resistance or in bad heating
conditions.

#### 2. PCB Design

Precautions

# ◆Land pattern design

1. Please refer to a recommended land pattern.

#### 3. Considerations for automatic placement

Precautions

- ◆Adjustment of mounting machine
  - 1. Excessive impact load should not be imposed on the products when mounting onto the PC boards.
  - 2. Mounting and soldering conditions should be checked beforehand.

Technical considerations

- Adjustment of mounting machine
  - 1. When installing products, care should be taken not to apply distortion stress as it may deform the products.

# 4. Soldering

#### ◆Wave soldering

- 1. Please refer to the specifications in the catalog for a wave soldering
- ◆Reflow soldering
  - 1. Please contact any of our offices for a reflow soldering, and refer to the recommended condition specified.
- **♦**Lead free soldering
  - When using products with lead free soldering, we request to use them after confirming adhesion, temperature of resistance to soldering heat, etc. sufficiently.

# Precautions

◆Preheating when soldering

 $Heating: The \ temperature \ difference \ between \ soldering \ and \ remaining \ heat \ should \ not \ be \ greater \ than \ 150 ^{\circ}C.$ 

Cooling: The temperature difference between the components and cleaning process should not be greater than 100°C.

◆Recommended conditions for using a soldering iron

Put the soldering iron on the land-pattern.

Soldering iron's temperature - Below 350°C

Duration - 3 seconds or less

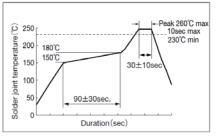

The soldering iron should not directly touch the inductor.

# ◆Wave, Reflow, Lead free soldering

1. If products are used beyond the range of the recommended conditions, heat stresses may deform the products, and consequently degrade the reliability of the products.

[Recommended reflow condition]

# ◆Preheating when soldering

- 1. There is a case that products get damaged by a heat shock.
- ◆Recommended conditions for using a soldering iron
  - If products are used beyond the range of the recommended conditions, heat stresses may deform the products, and consequently degrade the reliability of the products.

This catalog contains the typical specification only due to the limitation of space. When you consider the purchase of our products, please check our specification. For details of each product (characteristics graph, reliability information, precautions for use, and so on), see our Web site (http://www.ty-top.com/).

5. Handling	
	<ul> <li>◆Handling</li> <li>1. Keep the inductors away from all magnets and magnetic objects.</li> <li>◆Setting PC boards</li> </ul>
	1. When setting a chip mounted base board, please make sure that there is no residual stress to the chip by distortion in the board or at screw part.
Precautions	♦Breakaway PC boards (splitting along perforations)
	1. When splitting the PC board after mounting inductors, care should be taken not to give any stresses of deflection or twisting to the board.
	2. Board separation should not be done manually, but by using the appropriate devices.
	♦ Mechanical considerations
	Please do not give the inductors any excessive mechanical shocks.
	♦Handling
	1. There is a case that a characteristic varies with magnetic influence.
	♦ Setting PC boards
Technical	1. There is a case that a characteristic varies with residual stress.
considerations	◆Breakaway PC boards (splitting along perforations)
	1. Planning pattern configurations and the position of products should be carefully performed to minimize stress.
	♦ Mechanical considerations
	1. There is a case to be damaged by a mechanical shock.

6. Storage conditions	
Precautions	◆Storage  1. To maintain the solderability of terminal electrodes and to keep the packing material in good condition, temperature and humidity in the storage area should be controlled.  •Recommended conditions  Ambient temperature −5~40°C  Humidity Below 70% RH  The ambient temperature must be kept below 30°C. Even under ideal storage conditions, solderability of products electrodes may decrease as time passes.  For this reason, inductors should be used within 6 months from the time of delivery.
Technical considerations	◆Storage 1. Under a high temperature and humidity environment, problems such as reduced solderability caused by oxidation of terminal electrodes and deterioration of taping/packaging materials may take place.
