APPLICATION NOTES

1. Parallel Operation

The VFK600 series are designed for parallel operation. When in parallel the load current can be shared equally between the two modules by connecting their PC pins. The VFK600 can be setup in two different modes to achieve parallel operation. The standard parallel operation is suitable when load cannot be handled by a single unit, whereas the N+1 redundant operation is suitable for loads when backup power is required.

External Resistors

Trim-Up/Trim-Down Formulas

$$V_f = \frac{1.24 \times \left(\frac{R_t \times 33}{R_t + 33} \right)}{7.68 + \left(\frac{R_t \times 33}{R_t + 33} \right)}$$

$$V_{out} = (V_o + V_R) \times V_f$$

Note: $R_t = 6.8 \text{ K}\Omega$

V_o is the nominal output voltage

V_{OUT} is the desired output voltage (up or down)

V_R is the trim resistor in $\text{K}\Omega$

External DC Voltage

Trim-Up/Trim-Down Formulas

$$V_{out} = V_T \times V_o$$

Note: V_T is the trim terminal voltage

V_o is the nominal output voltage

V_{OUT} is the desired output voltage (up or down)
