General Description

The 9ZXL0831 is a low-power 8-output differential buffer that meets all the performance requirements of the Intel DB800ZL specification. It is suitable for PCI-Express Gen1/2/3 or QPI/UPI applications, and uses a fixed external feedback to maintain low drift for demanding QPI/UPI applications.

Recommended Application

Buffer for Romley, Grantley and Purley Servers, SSD drives and PCIe

Output Features

- 8 - LP-HCSL Output Pairs

Features/Benefits

- Low-power push-pull outputs; Save power and board space - no Rp
- Space-saving 48-pin VFQFPN package
- Fixed feedback path for 0ps input-to-output delay
- 8 OE# pins; hardware control of each output
- PLL or bypass mode; PLL can dejitter incoming clock
- 100MHz or 133MHz PLL mode operation; supports PCIe and QPI applications
- Selectable PLL bandwidth; minimizes jitter peaking in downstream PLL's
- Spread Spectrum Compatible; tracks spreading input clock for low EMI

Key Specifications

- Cycle-to-cycle jitter <50ps
- Output-to-output skew <65 ps
- Input-to-output delay variation <50ps
- PCIe Gen3 phase jitter <1.0ps RMS
- QPI/UPI 9.6GT/s 12UI phase jitter <0.2ps RMS

Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the 9ZXL0831. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

[1]Guaranteed by design and characterization, not 100% tested in production. C_L = 2pF with R_S = 27Ω for Zo = 85Ω differential trace impedance).

[2] Measured from differential waveform

[3] Slew rate is measured through the Vswing voltage range centered around differential 0V. This results in a +/-150mV window around differential 0V.

[4] Matching applies to rising edge rate for Clock and falling edge rate for Clock#. It is measured using a +/-75mV window centered on the average cross point where Clock rising meets Clock# falling. The median cross point is used to calculate the voltage thresholds the oscilloscope is to use for the edge rate calculations.

[5] Vcross is defined as voltage where Clock = Clock# measured on a component test board and only applies to the differential rising edge (i.e. Clock rising and Clock# falling).

[6] The total variation of all Vcross measurements in any particular system. Note that this is a subset of Vcross_min/max (Vcross absolute) allowed. The intent is to limit Vcross induced modulation by setting Δ-Vcross to be smaller than Vcross absolute.

Notes for preceding table:

[1] C_L = 2pF with RS = 27Ω for Zo = 85Ω differential trace impedance. Input to output skew is measured at the first output edge following the corresponding input.

[2] Measured from differential cross-point to differential cross-point. This parameter can be tuned with external feedback path, if present.

[3] All Bypass Mode Input-to-Output specs refer to the timing between an input edge and the specific output edge created by it.

[4] This parameter is deterministic for a given device

[5] Measured with scope averaging on to find mean value.

[6] t is the period of the input clock

[7] Measured as maximum pass band gain. At frequencies within the loop BW, highest point of magnification is called PLL jitter peaking.

[8] Guaranteed by design and characterization, not 100% tested in production.

[9] Measured at 3 db down or half power point.

[10] Duty cycle distortion is the difference in duty cycle between the output and the input clock when the device is operated in bypass mode.

[11] Measured from differential waveform

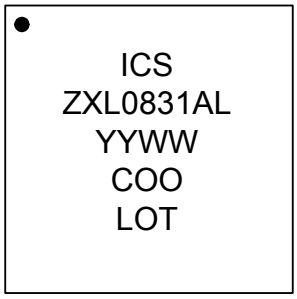
Marking Diagram



Notes:

1. “L” denotes RoHS compliant package.
2. “YYWW” is the last two digits of the year and week that the part was assembled.
3. “COO”: country of origin.
4. “LOT” denotes the lot number.

Package Outline and Package Dimensions (NDG48), Use Option 1

Ordering Information

Part / Order Number	Shipping Package	Package	Temperature
9ZXL0831AKLF	Trays	48-VFQFN	0 to +70°C
9ZXL0831AKLFT	Tape and Reel	48-VFQFN	0 to +70°C

"LF" suffix to the part number are the Pb-Free configuration and are RoHS compliant.

“A” is the device revision designator (will not correlate with the datasheet revision).

While the information presented herein has been checked for both accuracy and reliability, Integrated Device Technology (IDT) assumes no responsibility for either its use or for the infringement of any patents or other rights of third parties, which would result from its use. No other circuits, patents, or licenses are implied. This product is intended for use in normal commercial applications. Any other applications such as those requiring extended temperature range, high reliability, or other extraordinary environmental requirements are not recommended without additional processing by IDT. Revision History

Rev.	Issuer	Issue Date	Description	Page #
A	RDW	10/21/2013	Updated electrical tables with Char data. Move to final	Various
B	RDW	7/30/2014	Changed DB1200ZL reference in "general description" to DB800ZL	1
C	RDW	7/1/2015	Updated POD drawing.	15
D	RDW	11/20/2015	1. Updated QPI references to QPI/UPI 2. Updated DIF_IN table to match PCI SIG specification, no silicon change	1,5
E	RDW	8/16/2016	Corrected typos in package ordering information	17
