Dear < Customer Name>,

Re: Announcing Obsolescence of Certain Infrared Sensors and Hall-effect Sensor ICs

Honeywell Sensing and Control (S&C) is implementing a plan at its Richardson Texas Wafer Fab facility that will improve output and quality of our overall electronic sensor portfolio. One result of this enhancement, however, is that S&C will no longer produce certain Infrared Sensor and Hall-effect Sensor IC catalog listings that reflect no orders or minimal quantity orders since 2009.

Last Time Buy

Customers who require parts that are being made obsolete should plan to have their full demand and orders placed no later than **October 1**, **2013** with delivery no later than **December 31**, **2013**. This provides customers with a 3-month period to analyze their upcoming demand requirements, and allows Honeywell time to assist them in supporting their requirements while they investigate potential replacement design units.

Important Dates

- October 1, 2013: Last time buy. No orders will be accepted after this date. These catalog listings will be removed from the S&C website. Additionally, documentation will be updated to reflect this change
- December 31, 2013: Final delivery. Honeywell will not deliver parts after this date.

Affected Listings and Applicable Replacements

Catalog Listing	Potential Replacement Catalog Listing	Product Family
INFRARED SENSORS	8	
SD3421-002	none	Photodiode Detector
SD5421-002	none	Photodiode Detector
HOA6473-001	none	Transmissive Optoschmitt Sensor
